## FALCON MARKETPLACE - DISCOUNT TIRE EL PASO COUNTY, COLORADO

## Traffic Engineer's Statement

The traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

Date: May 27, 2021

Curtis D. Rowe, P.E., PTOE
Vice President

## Developer's Statement

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

# Kimley»"Horn 

May 27, 2021

Mr. Ryan Howser
El Paso County
Planning and Community Development
2880 International Circle
Suite 110
Colorado Springs, CO 80910
Re: Discount Tire - Traffic Compliance Letter
Falcon Marketplace
El Paso County, Colorado
PCD File No. AL214 and PPR2112

## Dear Mr. Howser:

The purpose of this letter is to provide a trip generation comparison to identify conformance with the original Falcon Marketplace Traffic Impact Analysis (TIA) for a proposed Discount Tire store to be located within Falcon Marketplace on the northwest corner of the Woodmen Road and Meridian Road intersection in El Paso County, Colorado. Specifically, Discount Tire is proposed on Lot 4, located on the northwest corner of the right-in/right-out access and Meridian Road intersection.

This letter contains the following:

- A trip generation comparison of the currently proposed use to the use assumed in the original Falcon Marketplace TIA
- Any changes to the recommendations determined in the Falcon Marketplace TIA based on this proposed project

## Land Use

A new Discount Tire is proposed to include a building of approximately 7,488 square feet on Lot 4 of the overall development (site plan attached). A Tire Store was identified to be located on Lot 6 of the overall Falcon Marketplace Traffic Impact Analysis prepared by LSC in September 2018. The original land use evaluated on Lot 4 in the original study was a fastfood restaurant with drive-through window. These land uses will most likely just swap lot locations with the buildout of the proposed Discount Tire on Lot 4. Therefore, for purposes of this traffic compliance letter, it was assumed that the tire center development originally evaluated will be located on this Lot 4 instead.

The overall development evaluated in the original study included 15,000 square feet of a pet supply superstore, a 123,000 square foot supermarket, a gas station with 18 fueling positions, 8,500 square feet of fast food restaurants with drive-through, 13,000 square feet of retail shopping center space, a 7,720 square foot tire store, 7,800 square feet of clinic use space, and a 1,300 square foot coffee/donut shop with drive-through.

# Kimley»"Horn 

## Trip Generation

Site-generated traffic estimates are determined through a process known as trip generation. Rates and equations are applied to the proposed land use to estimate traffic generated by the development during a specific time interval. The acknowledged source for trip generation rates is the Trip Generation Report ${ }^{1}$ published by the Institute of Transportation Engineers (ITE). ITE has established trip rates in nationwide studies of similar land uses. The original TIA used trip generation average rates that were based on the ITE Trip Generation, $9^{\text {th }}$ Edition (current edition at the time). For this proposed project, Kimley-Horn used the average rate equations of the ITE Trip Generation, $10^{\text {th }}$ Edition (most current edition), for the proposed Discount Tire store. The tire store is identified in the ITE Trip Generation as land use code 848. Trip generation calculations for the proposed use is attached. The following table summarizes the estimated trip generation for the proposed 7,488 square foot Discount Tire store compared to the trips generated by the 7,720 square foot tire store from the original TIA.

Trip Generation Comparison
Original Tire Store vs. Proposed Discount Tire Store

|  | Daily Vehicle Trips | Weekday Vehicle Trips |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | AM Peak Hour |  |  | PM Peak Hour |  |  |
|  |  | In | Out | Total | In | Out | Total |
| Original TIA Tire Store - 7,720 SF | 192 | 14 | 8 | 22 | 14 | 18 | 32 |
| Proposed Discount Tire Tire Store - 7,488 SF | 214 | 13 | 7 | 20 | 13 | 17 | 30 |
| Net Difference in Trips | +22 | -1 | -1 | -2 | -1 | -1 | -2 |

The proposed Discount Tire store is projected to generate 214 daily trips, with 20 of these trips occurring during the morning peak hour and 30 of these occurring during the afternoon peak hour. The original TIA included a 7,720 square foot tire store expected to generate 192 daily trips with 22 of these trips occurring during the morning peak hour and 32 trips occurring during the afternoon peak hour. Therefore, the proposed Discount Tire store produces 22 additional daily trips due to the updated equations from the $9^{\text {th }}$ to $10^{\text {th }}$ Edition of the ITE Trip Generation Manual. During the studied peak hours, a decrease in two (2) trips are expected during each of the morning and afternoon peak hours. Although the daily trips increased due to the newer trip generation rates, the peak hour trips which are actually evaluated on the adjacent street network and intersections to determine improvement needs are expected to decrease with this current proposal.

## Roadway Improvements

The attached Table 7b from the Falcon Marketplace TIA shows the roadways improvements that will be constructed with the first phase of the Falcon Marketplace project including the new improvements recommended with the King Soopers grocery store. In addition, the "dollar per trip" calculation is included for this site. The offsite roadway improvements are being constructed to serve the overall development.

[^0]
## Kimley»Horn

Because Discount Tires is increase in building area from 6,000 square feet to 7,488 square feet from the original traffic study, the development's fair share cost for the five intersection improvements have already been calculated. These have been summarized as follows from the previous traffic study findings:

- The eastbound left turn lane improvement at Woodmen Road and Meridian Road was identified as 0.04 percent and $\$ 125$ for this project.
- The eastbound left turn lane improvement at Woodmen Road and Golden Sage was identified as 0.27 percent and $\$ 540$ for this project.
- The eastbound left turn lane protected/permissive phasing improvement at Woodmen Road and Golden Sage was identified as 0.27 percent and $\$ 91$ for this project.
- The southbound right turn lane improvement at Woodmen Road and Golden Sage was 0.32 percent and $\$ 323$ for this project.
- The traffic signal installation at N Frontage Road and Golden Sage Road was calculated as 0.17 percent and $\$ 631$ for this project in this improvement.

The total project cost participation for these four improvements equals $\$ 1,710$.

## Conclusion

In summary, this proposed Discount Tire on Lot 4 of the overall Falcon Marketplace development is believed to be in traffic compliance with the original TIA. Development of the Discount Tire project is expected to generate 22 additional daily trips, but two (2) fewer trips during each of the studied morning and afternoon peak hours when comparing to the original TIA intensity. Due to this decrease in project traffic volume in the studied peak hours, all original traffic study results and conclusions remain valid. If you have any questions or require anything further, please feel free to call.

Sincerely,
KIMLEY-HORN AND ASSOCIATES, INC.

Curtis D. Rowe, P.E., PTOE Vice President

Lengthening of the current eastbound single leff-turn deceleration lane on Woodmen approaching Golden Sage Road to provide a 240 -foot transition taper ( \(20: 1\) taper ratio), 290 feet of deceleration distance plus sufficient vehicle stacking distance. CURRENT: 175 -foot taper plus a 465 -foot left-turn
lane which translates to a 175 -foot taper, 290 -foot deceleration distance, and 175 feet of stacking distance. SHORT TERM: \\
Adequate stacking is available in the current turn lane - \\
calculated queue length 141 feet. LONG TERM: Lengthen single left-turn lane and/or future implementation of dual left-turn \\
lanes (if capacity needs dictate) to maintain 290 feet of deceleration length, a 240 -foot lane taper (20:1 taper ratio) plus provide sufficient vehicle stacking length - model indicates 471 feet of dual left stacking distance based on morning peak-hour projected volumes. If a dual left is implemented in the future,
consideration will need to be given to the configuration on Golden Sage and at the Golden Sage/Woodmen Frontage Road intersection to receive the dual left-turn movement.

Note: The pro-rata share calculation for the Discount Tires has been revised to take into account the increase of square footage. A factor of 1.248 has been applied to the fair share percent and cost. The new pro-rate share calculation for the left turn lane improvement at Woodmen Road and Goldmen Sage intersection has been updated in blue text.

## Exhibit 4

## "Triggers" for Signalization at Golden Sage/Woodmen N Frontage Road <br> (Attachment to Table 7b - Improvements)

Trigger No. 1: If Signal Warrants are not met but there are level of service and/or problematic queues and/or there are safety issues at the intersection or between the intersections (associated with the short intersection spacing) Evaluate:

- Test No. 1 -Queuing Issues
- Test No. 2 -Right Turn Operations
- Test No. 3-Left Turn Operations
- Test No. 4 - Alternatives to a signal

Trigger No. 2: If signal warrant(s) are met at the intersection - either due to four/eight- hour signal warrants, crash experience warrant, or other applicable warrant(s):

- If warrants are met and LOS and/or queues are problematic and/or there are safety issues, go to
- Test No. 1 - Queuing Issues
- Test No. 2 - Right Turn Operations
- Test No. 3 - Left Turn Operations
- Test No. 4 - Alternatives to a signal
- If warrants are met and LOS and/or queues are not problematic or there are not significant safety issues, the installation could potentially be delayed.

Test \#1: Queueing Operations:

- Once southbound queues extending back from Woodmen/Golden Sage intersection regularly back up to or through the N. Frontage Road intersection
- And:
- Queues regularly block the northbound left movement at this intersection and cause queues in the northbound lane.
- Queues regularly block/impede westbound traffic at this intersection from being able to turn left onto southbound Golden Sage and this regularly results in a long westbound queue which
- Creates operational/safety issues at intersections to the east or
- Results in westbound waiting through multiple

Woodmen/Golden Sage signal cycles.

- Queues regularly block/impede the passage of east/west through travel on the Frontage Road.

Test \#2: Are the queuing issues identified in Test \#1 primarily due southbound right Turns at Woodmen/Golden Sage?

- Has the separate SB right turn lane has been added?
- If so, have other causes of the southbound right turn queues lane been evaluated and all possible solutions to improve the SB RT operations been exhausted?

Test \#3: Are the queuing issues identified in Test \#1 primarily due southbound left turns at Woodmen/Golden Sage?

- Has the potential for a $2^{\text {nd }}$ southbound left turn lane been evaluated?
- If a second southbound left turn lane has been added, have other causes of the southbound left turn queues lane been evaluated and all possible solutions to improve the SB LT operations been exhausted?

Test \#4: Have other alternatives to a traffic signal at Woodmen N Frontage Road/Golden Sage been evaluated and options exhausted?
