Traffic Engineer's Statement

The attached traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

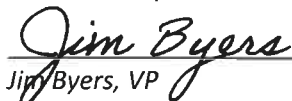

Scott D. Barnhart, P.E. #37447

Attention: Mr. Jim Byers

RE: Falcon Highlands Filing No. 3 Traffic Impact Study

Dear Mr. Byers:

Matrix Design Group (Matrix) is pleased to present this traffic impact study (TIS) for the Falcon Highlands Filing No. 3 development. This TIS analyzes the existing roadway network in the vicinity of the project and determines the impact of the additional traffic generated by the proposed development. The full build-out year (2025) and horizon year (2045) conditions were analyzed, with and without the addition of site-generated traffic.

Introduction

The Falcon Highlands Filing No. 3 development, herein referred to as “the site”, is a proposed development located in El Paso County, Colorado. The site includes 395 proposed single-family detached houses. The site is bounded by the existing Falcon Highlands Filing No. 2 to the north, Tamlin Road to the east and south, and undeveloped land to the west. See Figure 1 for a vicinity map. The overall development was previously analyzed by LSC in the *Falcon Highlands Filing No. 3 Traffic Impact Analysis*, dated January 5, 2011. Additionally, several individual developments in and surrounding the Baseline development have submitted traffic impact studies. These studies include:

- *Banning Lewis Ranch Villages A – D Master Traffic Impact Study, 2020*
- *Falcon Highlands Taco Bell Traffic Technical Memorandum, 2018*

The proposed land use of the site is shown on the site plan in Figure 2.

The purpose of this TIS is to analyze the existing conditions within the study area, determine the traffic generated by the site, analyze the build-out year (2025) and horizon year (2045) traffic conditions, and determine the impact of site-generated traffic on the adjacent roadway network. The study area for this TIS includes seven intersections:

- Woodmen Road & Golden Sage Road
- Rolling Thunder Way & Bridal Vail Way
- Rolling Thunder Way & Antelope Meadows Circle (East)
- Rolling Thunder Way & Foxtail Meadow Lane
- Rolling Thunder Way & Meridian Road
- US 24 & Old Meridian Road (see paragraph below)
- US 24 & New Meridian Road

When All Traffic Data recorded traffic volumes at Old Meridian Road & US 24, the intersection was a full-movement signalized intersection. The intersection will become a right-in, right-out intersection by the year 2025. Therefore, Matrix did not analyze the Old Meridian Road & US 24 intersection in both future scenarios (full build-out and horizon). Furthermore, Matrix assumed that for future scenarios, the left-turn, northbound through, and southbound through traffic volumes that would have gone through the Old Meridian Road & US 24 intersection in the future scenarios will travel through the New Meridian Road & US 24 intersection instead.

Figure 1 - Vicinity Map

Figure 2 - Site Plan

Existing Conditions

Matrix analyzed the existing traffic conditions at the intersections listed above based on the traffic volumes from All Traffic Data, taken May 20 and June 2, 2021. The existing intersection geometry is shown in Figure 3. The existing AM and PM peak hour traffic volumes are shown in Figures 4 and 5, respectively. A summary of how each of the study area intersections currently operate in the AM and PM peak scenarios is shown in Table 1 and Table 2, respectively. As shown in the tables, each of the seven intersections analyzed operate at an acceptable level-of-service (LOS), LOS D or better, during both the AM and PM peak hours.

Matrix assumed that the response to the COVID-19 pandemic did not significantly impact the traffic counts taken. CDOT records ADT counts on US 24 near New Meridian Road, which is close to where ADT counts were taken for this project. Prior to the pandemic, CDOT recorded an AADT of 16,737 in 2019. On May 20, 2021, All Traffic Data recorded an AADT of 18,566. Therefore, for the purposes of this TIS, the traffic volume does not seem to be impacted by the COVID-19 pandemic in this area.

5	Rolling Thunder Way/Meridian Rd	Signalized	HCM 6th Edition	EB Left	0.270	22.7	C
6	Old Meridian Rd/US 24	Signalized	HCM 6th Edition	NB Right	0.585	25.9	C
11	New Meridian Rd/US 24	Signalized	HCM 6th Edition	EB Thru	0.611	34.4	C

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Proposed Development

The site includes 395 proposed single-family houses, as shown in Figure 2. The trip generation results for daily trips and both AM and PM peak hours can be found in Appendix B. A summary of the trip generation results is shown in Table 3.

The vehicle trips associated with the site were calculated using the Institute of Transportation Engineers (ITE) *Trip Generation Manual, Tenth Edition*. This methodology consists of choosing an independent variable for the land use for a particular time of day. The independent variable correlates to the variation in trip ends and is related to the land use. The value of the independent variable is either multiplied by a weighted average or used in a regression equation to calculate the trips generated by the land use. The *ITE Trip Generation Manual* provides guidance on when to use the weighted average versus the regression equation. In most cases, the regression equations are recommended when there are adequate study data points.

Table 3 – Trip Generation Summary

ITE Code	Land Use	Size	Units	Weekday Daily			AM Peak Hour			PM Peak Hour		
				Entering	Exiting	Total	Entering	Exiting	Total	Entering	Exiting	Total
210	Single-Family Detached Housing	395	Dwelling Units	1840	1840	3680	71	214	285	239	141	380

The site connects to the existing roadway network via Bridal Vail Way and Antelope Meadows Circle. See Figure 6 for the anticipated trip distribution of site-generated traffic. The directional distribution of site-generated traffic was determined by reviewing the existing average daily trips in the vicinity of the site.

The assignment of the new project trips from the site are shown in Figures 7 and 8 for AM and PM peak hour, respectively.

For the purposes of this TIS, Matrix assumed a 3% per year background growth rate. The growth rate is based on the CDOT growth rate along US 24 and Woodmen Road in the vicinity of the site for the year 2019. The CDOT growth rate for 2020 was not used since traffic was impacted by the COVID-19 pandemic, resulting in a negative rate. The growth factor that results from a 3% per year background growth rate for the year 2025 is 1.1255. The growth factor that results from a 3% per year background growth rate for the year 2045 is 2.0328.

Figure 6 – Trip Distribution

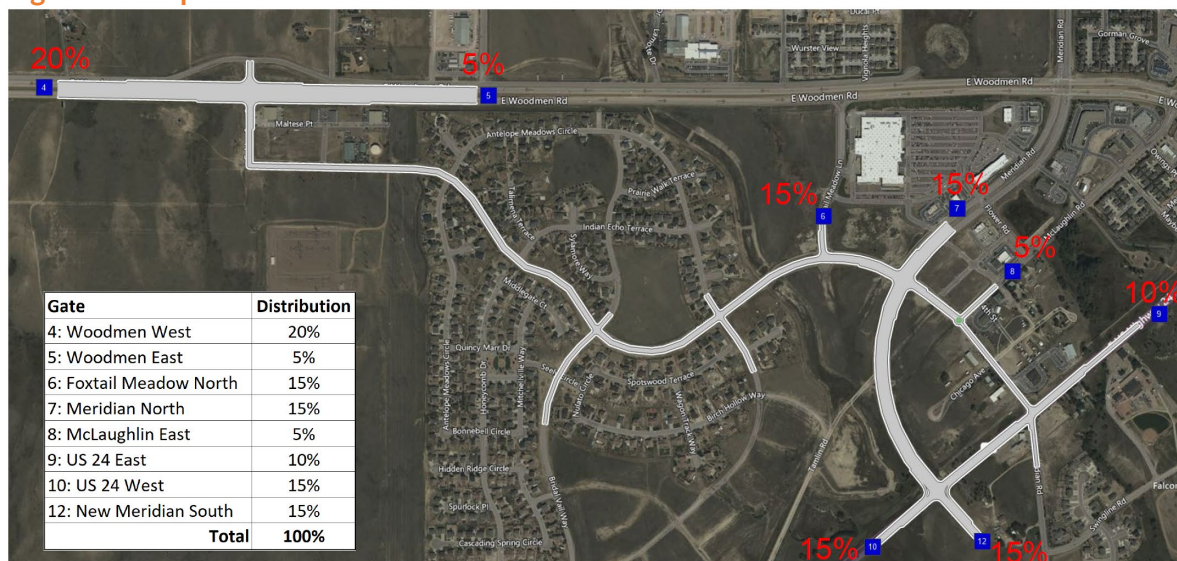

Figure 7 - AM Peak Hour Trip Assignment

Figure 8 - PM Peak Hour Trip Assignment

Full Build-Out Conditions (2025) Traffic Analysis

Matrix assumed the site will be fully developed and inhabited by the year 2025. The anticipated intersection geometry is shown in Figure 9. Matrix assumed that the geometries of the six intersections analyzed in the future scenarios will not change from the existing lane geometry shown in Figure 3. As previously stated, the intersection of US 24 and Old Meridian was not analyzed in the future scenarios.

Figure 9 - Full Build-Out (2025) Intersection Geometry

Full Build-Out Conditions (2025) Background Traffic Analysis

The anticipated AM and PM peak hour counts in the background scenarios are shown in Figures 10 and 11, respectively. A summary of the anticipated intersection performance during the background AM and PM peak scenarios is shown in Tables 4 and 5, respectively. As shown in the tables, each of the six intersections analyzed are anticipated to operate at an acceptable level-of-service (LOS), LOS D or better, during both the AM and PM peak hours.

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Full Build-Out Conditions (2025) Total Traffic Analysis

The anticipated AM and PM peak hour counts in the total (background and site-generated) traffic scenarios are shown in Figures 12 and 13, respectively. A summary of how each intersection operates in the AM and PM peaks is shown in Tables 6 and 7, respectively. As shown in the tables, each of the six intersections analyzed are anticipated to operate at an acceptable level-of-service (LOS) during both the AM and PM peak hours.

Figure 12 - Full Build-Out (2025) Total AM Peak Hour Traffic Volumes

11	New Meridian Rd/US 24	Signalized	HCM 6th Edition	NB Thru	0.795	42.4	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

The length of turn lanes required to accommodate the full build-out (2025) traffic was analyzed at each intersection. Table 8 shows the turn lanes that did not have adequate storage to meet El Paso County’s minimum or the 95% queue length, or both. The Engineering Criteria Manual, specifically Figure 2-27 and Table 2-30, was used to determine the minimum storage lengths for both signalized and stop-controlled intersections, respectively. The 95% queue lengths were given by PTV Vistro. Table 8 shows that the turning movements that do not have adequate storage in the 2025 scenario would be inadequate regardless of the site-generated traffic, except for the westbound left turn at Rolling Thunder Way and Bridal Vail Way. Matrix recommends extending the storage length of the westbound left turn lane to 150 feet to meet the County’s requirement. Note that additional storage length recommendations are included to accommodate the horizon (2045) traffic, as discussed later in this TIS.

Table 8 – Full Build-Out (2025) Inadequate Turn Lane Lengths

Intersection	Turning Movement	Turn Lane Length [ft]				
		Existing	2025 Background		2025 Total	
			95% Queue	Min per EPC ECM	95% Queue	Min per EPC ECM
Woodmen Road & Golden Sage Road	NBL	150	261 (AM)	200	314 (AM)	250
Rolling Thunder Way & Bridal Vail Way	WBL	100	2 (PM)	50	11 (PM)	150

Horizon (2045) Traffic Analysis

Matrix analyzed the traffic conditions for the horizon scenario, year 2045. The anticipated intersection geometry (without mitigation) is shown in Figure 14. The *Final Planning & Environmental Linkages (PEL) Report – US 24 Planning & Environmental Linkages Study* by CDOT, dated March 2018, was used to assume future lane geometries along the US 24 corridor.

Figure 14 - Horizon (2045) Intersection Geometry (Without Mitigation)

Horizon (2045) Background Traffic Analysis

The projected traffic volumes during the 2045 AM and PM background peak hours are shown in Figures 15 and 16, respectively. A summary of how the study area intersections will operate (without mitigation) during the 2045 AM and PM background peak hours are shown in Tables 9 and 10, respectively. As shown in the tables, five of the six intersections analyzed are anticipated to operate at an acceptable level-of-service (LOS) during both the AM and PM peak hours. The intersection of Woodmen Road and Golden Sage Road is anticipated to have a LOS of F in both the AM and PM peak hours with the existing intersection geometry. To mitigate the failing LOS, the lane geometry of Woodmen Road is anticipated to include eight through lanes (four in each direction), as shown in the anticipated intersection geometry (with mitigation) in Figure 17. The LOS summary for the intersection of Woodmen Road and Golden Sage Road (with mitigation) is shown for AM and PM peak hours in Tables 11 and 12, respectively.

The following traffic signal phasing was assumed at the intersection of Woodmen Road and Golden Sage Road:

- Unmitigated
 - Eastbound protected left-turn phasing
- Mitigated
 - Eastbound protected left-turn phasing
 - Westbound protected left-turn phasing

The phasing for both eastbound and westbound left-turns in the mitigated scenario must be protected, due to the four opposing through lanes. Refer to Figure 4-16 in the *NCHRP Report 812 Signal Timing Manual Second Edition*, produced in cooperation with the USDOT and the FHWA.

Figure 15 - Horizon (2045) Background AM Peak Hour Traffic Volumes

Figure 16 - Horizon (2045) Background PM Peak Hour Traffic Volumes

Table 9 – Horizon (2045) Background AM Peak Hour LOS Summary (Without Mitigation)

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS

Horizon (2045) Total Traffic Analysis

The projected traffic volumes during the 2045 AM and PM total (background and site-generated) traffic scenarios are shown in Figures 18 and 19, respectively. A summary of how the study area intersections will operate (without mitigation) during the AM and PM peaks is shown in Tables 13 and 14, respectively. As previously discussed, Woodmen Road is anticipated to have eight through lanes (mitigation) at the intersection with Golden Sage Road. Tables 15 and 16 give the LOS summary (with mitigation) for the intersection of Woodmen Road and Golden Sage Road, respectively. As shown in the tables, each of the six intersections analyzed are anticipated to operate at an acceptable level-of-service (LOS) during both the AM and PM peak hours, assuming the mitigated scenario.

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Table 15 – Horizon (2045) Total AM Peak Hour LOS Summary (With Mitigation)

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Woodmen Rd/Golden Sage Rd	Signalized	HCM 6th Edition	NB Left	0.824	44.6	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Table 16 – Horizon (2045) Total PM Peak Hour LOS Summary (With Mitigation)

ID	Intersection Name	Control Type	Method	Worst Mvmt	V/C	Delay (s/veh)	LOS
1	Woodmen Rd/Golden Sage Rd	Signalized	HCM 6th Edition	WB Left	0.736	35.9	D

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

Conclusion and Recommendations

The length of turn lanes required to accommodate the full build-out (2045) traffic was analyzed at each intersection. Table 17 shows the turn lanes that did not have adequate storage to meet El Paso County’s minimum or the 95% queue length, or both. The Engineering Criteria Manual, specifically Figure 2-27 and Table 2-30, was used to determine the minimum storage lengths for both signalized and stop-controlled intersections, respectively. The 95% queue lengths were given by PTV Vistro. Matrix recommends that the development should be responsible for increasing the storage length by the difference in between the minimum required total and background storage lengths, as shown in the far right column in Table 17. Since the southbound approach of Golden Sage Road to Woodmen Road is only about 120 feet, Matrix recommends double southbound left turn lanes on Golden Sage Road. Note that these recommendations assume a 3% growth rate, which may overestimate the horizon (2045) traffic volumes for some movements. El Paso County should continue to monitor these intersections to determine improvements needed based on updated traffic counts.

Table 17 – Horizon (2045) Inadequate Turn Lane Lengths

Intersection	Turning Movement	Turn Lane Length [ft]					Development Responsibility
		Existing	2045 Background		2045 Total		
			95% Queue	Min per EPC ECM	95% Queue	Min per EPC ECM	
Woodmen Road & Golden Sage Road (assumed mitigated scenario)	NBL	150	429 (AM)	330	524 (AM)	380	50
	SBL	120	204 (PM)	180	184 (PM)	190	10
Rolling Thunder Way & Meridian Road	WBR	120	171 (PM)	130	171 (PM)	130	n/a
Rolling Thunder Way & Bridal Vail Way	WBL	100	4 (PM)	100	12 (PM)	150	50

Since the addition of site-generated traffic to the adjacent roadway system does not warrant offsite roadway improvements, then additional connections to the future Dublin Boulevard extension would not have any impacts to the roadway system.

The site will provide at least one pedestrian access to the future Rock Island Trail extension. The future Rock Island Trail is anticipated to be between Tamlin Road and US 24 in the vicinity of the site and will not be routed through the site. The site will provide pedestrian access to the existing pedestrian facilities to the north of the site, allowing for a pedestrian route to the anticipated elementary school at the northeast corner of Rolling Thunder Way and Bridal Vail Way.

The project area conforms to El Paso County’s 2040 Roadway Plan, as shown in Figure 20. The Plan anticipates Woodmen Road will be an expressway, Highway 24 will be a principal arterial, and Rolling Thunder Way will be a collector. As previously discussed in this study, Woodmen Road is anticipated to have 8 through-lanes by the year 2045 for the Woodmen Road and Golden Sage Road intersection to operate at an acceptable LOS (LOS D or better).

Figure 20 - 2040 Roadway Plan

Map 14: 2040 Functional Classification

The applicant is required to pay a road impact fee to El Paso County. The County allows for the applicant to pay three different upfront fee amounts. The applicant can either pay the full fee amount, a smaller upfront fee to the 5 mill Public Improvement District (PID), or an even smaller upfront fee amount to the 10 mill PID. The different fee amounts are shown in Table 18 below, calculated using 395 single-family dwelling units. The applicant will choose which fee method to follow at a later date. If the applicant chooses one of the PIDs, the PID will collect taxes over time.

Table 18 - Road Impact Fee Schedule

Full Fee		5 Mill PID		10 Mill PID	
Per DU	Upfront Cost	Per DU	Upfront Cost	Per DU	Upfront Cost
\$ 3,830	\$ 1,512,850	\$ 2,527	\$ 998,165	\$ 1,221	\$ 482,295

If you have any questions, please feel free to contact me at Scott.Barnhart@matrixdesigngroup.com or at (719) 575-0100. Thank you.
