## Judge Orr Eastonville Commercial Center

### Traffic Impact Study

(LSC #194730)

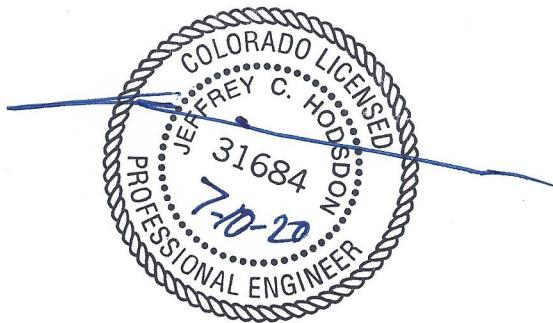

July 10, 2020

Please revise the title  
to Master Traffic  
Impact Study

Add PCD File No.  
SKP203

#### Traffic Engineer's Statement

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

#### Developer's Statement

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

Ordway, CO 81063

RE: Judge Orr Eastonville Commercial Center  
El Paso County, CO  
Traffic Impact Study  
LSC #194730

Dear Mr. and Mrs. Buford,

LSC Transportation Consultants, Inc. has prepared this transportation memorandum for the proposed Judge Orr Eastonville Commercial Center in El Paso County, CO. Located generally northeast of the intersection of Eastonville Road/Judge Orr Road (El Paso County parcel ID 4232302003), the 13.72-acre site is currently vacant. Access to the site is proposed to Judge Orr Road (south access) and Eastonville Road (west access). No direct access is proposed to US Highway 24 (US Hwy 24). This report has been prepared for submittal to El Paso County.

## REPORT CONTENTS

The preparation of this report included the following:

- An inventory of existing roadway and traffic conditions on major thoroughfares adjacent to the site, including surface conditions, functional classification, widths, pavement markings, traffic-control signs, posted speed limits, intersection and access spacing, roadway and intersection alignments, roadway grades, and auxiliary turn lanes;
- Weekday peak-hour turning-movement traffic counts at the intersections of Judge Orr Road/Meridian Ranch Road/Eastonville Road and US Highway 24/Judge Orr Road;
- Estimated average weekday traffic (AWT) volumes adjacent to the proposed development on Judge Orr Road, Eastonville Road, Meridian Ranch Road, and US Highway 24;
- Projections of 20-year background traffic volumes on Judge Orr Road, Eastonville Road, Meridian Ranch Road, and US Highway 24;
- The proposed site land use and access plan;
- Estimates of average weekday and weekday peak-hour trip generation for the proposed development and the estimated directional distribution of site-generated vehicle-trips on roadways and intersections adjacent to and in the vicinity of the site;

There is also a traffic study that was completed by Liberty Tree academy just north of the site that may be of use to your analysis.

- Projected site-generated and resulting total peak-hour intersection traffic volumes at the following study-area intersections: Judge Orr Road/Meridian Ranch Road/Eastonville Road and US Highway 24/Judge Orr Road;
- Projected total daily and peak-hour traffic volumes at the study-area intersections;
- Intersection level of service (LOS) analysis at the study-area intersections;
- Evaluation of short- and long-term projected intersection volumes to determine potential requirements for any auxiliary right-/left-turn lanes at the proposed site access points, based on the criteria in El Paso County's *Engineering Criteria Manual (ECM)*. Also included are potential long-term lane requirements; and
- Findings and recommendations for submittal to El Paso County.

## LIST OF OTHER TRAFFIC REPORTS USED IN THE PREPARATION OF THIS REPORT

The following previously-completed traffic reports are located adjacent to the proposed Judge Orr Eastonville Commercial Center and were used to provide reference and background information

- "Meadowlake Ranch" – dated May 29, 2019
- "Falcon Crossing" – dated February 15, 2007

Please indicate the ECM criteria for intersection spacing and state whether these proposed roadways as currently shown in the conceptual site plan meet the criteria. If they do not, please indicate that deviation request would be needed.

## LAND USE AND ACCESS

Figure 1 shows the site location relative to the adjacent and nearby roadways. Located generally northeast of the intersection of Eastonville Road/Judge Orr Road (El Paso County parcel ID 4232302003), the site is currently vacant. Anticipated land uses for the 13.72-acre site include:

- 151 – Mini-Warehouse (500 storage units)
- 565 – Day Care Center (approximately 90 students)
- 820 – Shopping Center (18 acres, assuming a 15-percent floor area ratio)
- 912 – Drive-in Bank (7,000 square feet)

Figure 1 shows the area circulation and access points to the adjacent public roads, while Figure 2 contains the proposed site plan showing the proposed land uses, on-site circulation, and proposed access points. Two full-movement, stop sign-controlled access points are proposed:

- Judge Orr Road – located approximately 1,620 feet east of Eastonville Road
- Eastonville Road – future extension of Copenhagen Road

The site plan on figure 2 indicates the distance as 1259 ft.

## ACCESS SIGHT DISTANCE

Stopping sight distances and access sight distances prescribed in Tables 2-33 and 2-35, respectively, in ECM Section 2.4.1 will need to be maintained along the site frontage of Judge Orr Road and Eastonville Road. Any site improvements including (but not limited to) landscaping, parking areas, buildings, monument signs, etc. must not impede the required lines of sight. Note: there are no vertical curves on Judge Orr Road or Eastonville Road that would limit sight distance.

Please state something along the lines of: once the roadway locations are finalized at the preliminary plan/final plat a sight distance analysis with exhibit will be provided. If the proposed access locations shown on the site plan are final then provide sight distance analysis with an exhibit.

## ROAD AND TRAFFIC CONDITIONS AND MTCP CLASSIFICATION

The MTCP shows this  
as a 4-lane principal  
arterial. Revise

Figure 1 shows the roads adjacent to and in the vicinity of the site. Adjacent roads serving the site are identified below followed by a brief description of each:

**US Highway 24 (US Hwy 24)** is a state highway extending locally from the City of Colorado Springs to Peyton in a northeasterly direction and then continuing east. US Hwy 24 is planned to be widened to four lanes through the Falcon area and is classified as an E-X – Expressway by the Colorado Department of Transportation (CDOT) and the *El Paso County Major Transportation Corridors Plan (MTCP)*. The posted speed limit on US Hwy 24 adjacent to the site is 65 miles per hour (mph). Auxiliary left-turn lanes currently exist on the northbound and southbound approaches at the signalized intersection of US Hwy 24/Judge Orr Road.

**Judge Orr Road** is a two-lane roadway that extends east from Eastonville Road across most of El Paso County. It is shown on the *El Paso County 2040 Major Transportation Corridors Plan* and the *Preserved Corridor Network Plan* as a four-lane Minor Arterial adjacent to the site (and west of Curtis Road). Posted speed limits adjacent to the site range from 45 to 55 mph. West of Curtis Road, the speed limit is 45 mph, while it generally increases to 55 mph east of Curtis Road. The intersection of US Hwy 24/Judge Orr is currently signalized. Due to the oblique angle of this intersection, the eastbound and westbound approaches are split-phased. The *US 24 Access Control Plan/PEL Study* shows future plans for realignment of Judge Orr at US Highway 24 to improve the intersection and provide an intersection angle closer to 90 degrees.

**Eastonville Road** is shown as a two-lane Minor Arterial on the *El Paso County 2040 Major Transportation Corridors Plan* and the *Preserved Corridor Network Plan*. A two-lane roadway extending northeast from Meridian Road past Hodgen Road, Eastonville Road has a posted speed limit of 35 mph. All approaches at the four-way stop sign-controlled intersection of Judge Orr Road/Eastonville Road have an exclusive left-turn lane, while the northwest-bound approach also has an auxiliary right-turn lane. South of Stapleton Drive, Eastonville Road's cross-section is consistent with a two-lane Urban Collector cross-section with a painted two-way left-turn lane (TWLTL).

**Meridian Ranch Road** extends from Eastonville Road to Sunset Crater Drive and is shown as a two-lane Collector on the MTCP. Judge Orr Road transitions to Meridian Road northwest of Eastonville Road and has a posted speed limit of 35 mph. The southeast-bound approach has a painted TWLTL with a shared through/right-turn lane.

### Existing Traffic Volumes

Vehicular turning-movement counts were conducted at the following intersections from 6:30-8:30 a.m. and from 4:00-6:00 p.m. on Wednesday, October 2, 2019:

- Judge Orr Road/Eastonville Road
- US Hwy 24/Judge Orr Road

Please state why stapleton/eastonville and woodmen hills/eastonville where not included in the study area. If they do not meet the threshold indicated in ECM appendix B to be included in the study area then please state it in the narrative

Figure 3 shows these turning-movement volumes, as well as the average weekday traffic volumes (estimated based on factored peak-hour count data) on the study-area roadways, including at the commercial access points north of the site. Raw count data is attached.

## PEDESTRIAN AND BICYCLE FACILITIES

Judge Orr Road and Eastonville Road do not currently have sidewalks or bicycle lanes to accommodate pedestrians or bicycles, but sidewalks would be required along both roadways following site buildout. The proposed subdivision roads are likely to be Urban roadways and, per ECM criteria, would require sidewalks.

The applicant plans to create a trail corridor along the north side of Judge Orr Road that could potentially be part of a connection to the Rock Island Trail (along the north side of US Hwy 24).

## TRIP GENERATION

Estimates of the vehicle-trips projected to be generated by the proposed Judge Orr Eastonville Commercial Center development have been made using the nationally published trip generation rates from *Trip Generation, 10<sup>th</sup> Edition, 2017* by the Institute of Transportation Engineers (ITE). Corresponding trip generation rates from the following ITE Land Use Categories have been used to develop the trip generation estimates for site buildout:

- 151 – Mini-Warehouse
- 565 – Day Care Center
- 820 – Shopping Center
- 912 – Drive-in Bank

Table 1 below presents a summary of the estimated external site trip generation. A detailed trip generation estimate for the site, including ITE rates for the proposed land uses, is presented in Table 5 (attached). Figure 2 shows the layout within the proposed Judge Orr Eastonville Commercial Center site.

**Table 1: Estimated External Site Vehicle-Trip Generation**

Analysis Period	Weekday		
	In	Out	Total
Morning Peak Hour	191	132	323
Afternoon Peak Hour	359	383	762
Daily/24-hour	3,399	3,399	6,798

The proposed Judge Orr Eastonville Commercial Center site is projected to generate about 6,798 total vehicle-trips on the average weekday during a 24-hour period, with approximately half entering and half exiting the site. During the morning peak hour, approximately 191 entering

vehicles and 132 exiting vehicles would be generated. Approximately 359 entering and 383 exiting vehicles would be generated by the site during the afternoon peak hour.

### **Pass-By and Diverted Trips**

The total number of trips to be generated by the site has also been aggregated by trip type to account for pass-by and diverted trips. A pass-by trip is one made by a motorist who would already be on an adjacent road regardless of the proposed development, but who stops in at the site while passing by. That pass-by motorist would then continue on his or her way to a final destination in the original direction. Table 5 (attached) shows the percentage of the trips generated that were assumed to be pass-by trips. Non-primary trip percentage has been based on data from the *Trip Generation Handbook - An ITE Proposed Recommended Practice, 3rd Edition, 2014* by ITE and adjustments by LSC for site-specific conditions.

LSC has used the average ITE percentage as pass-by trips for this site to include trips from adjacent Judge Orr Road and Eastonville Road. Diverted trips from adjacent US Hwy 24 are considered non-pass-by trips. These trips would be added to Judge Orr Road and would result in altered turning movements at the intersection of US Hwy 24/Judge Orr Road, but generally would not add “new impact” trips to US Hwy 24. ITE-average percent of non-primary trips for shopping-related land used for this study are summarized in Table 5. The resulting primary and non-primary trips are shown in Table 5.

ITE *Trip Generation* estimated that the proposed Judge Orr Eastonville Commercial Center development is projected to generate about 4,636 total non-pass-by vehicle-trips on the average weekday during a 24-hour period, with about half entering the site and half exiting the site during the afternoon peak hour.

## **TRIP DISTRIBUTION AND ASSIGNMENT**

### **Trip Directional Distribution**

The directional-distribution estimate of site-generated vehicle-trips to the study-area roads and intersections is a necessary component in determining the site’s traffic impacts. Figure 4 shows the percentages of the site-generated vehicle-trips projected to be oriented to and from the site’s major approaches. Estimates have been based on the following factors: the proposed new land use, the area roadway system serving the site, and the site’s geographic location relative to the overall greater El Paso County/Colorado Springs area. Directional-distribution splits from LSC’s previously-conducted Meadowlake Ranch traffic study (dated May 19, 2019) were considered when formulating the trip distribution percentages.

## Site-Generated Traffic

Site-generated traffic volumes have been estimated at the following intersections:

- Judge Orr Road/Eastonville Road
- Judge Orr Road/proposed south full-movement site access
- Eastonville Road/Copenhagen Road/proposed north full-movement site access
- US Highway 24/Judge Orr Road

These volumes have been calculated by applying the directional-distribution percentages estimated by LSC (from Figure 4) to the trip-generation estimates (from Table 5). Figure 5 shows the projected site-generated traffic volumes for the weekday morning and afternoon peak hours. The figure also shows the estimated average daily traffic volumes (ADTs).

## Existing + Site-Generated Traffic Volumes

Figure 6 shows the sum of the 2023 background traffic volumes (from Figure 3) and site-generated peak-hour traffic volumes (shown in Figure 5). These volumes represent the projected short-term total traffic following site buildout. Laneage and traffic control at the study-area intersections following site buildout are shown in Figure 6.

## 2040 Background Traffic Volumes

Long-term background traffic volumes are estimates by LSC, based on projected 2040 volumes adjacent to the site shown on Map 9 of the County's MTCP. Additionally, traffic generated by planned adjacent and nearby developments, such as Meadowlake Ranch and Falcon Crossing, has been included in 2040 background traffic volumes, as shown in Figure 7.

Future access to the proposed Falcon Crossing site (zoned M-Industrial, 49 acres) would likely be required to align with this site's access on Judge Orr Road. Approximately 60 percent of future Falcon Crossing traffic was assumed to orient to/from US Hwy 24, while the remainder would access the site via the Eastonville/Judge Orr/Meridian Ranch intersection to the west.

## 2040 Total Traffic Volumes

Figure 8 shows the sum of 2040 background traffic volumes (from Figure 7) plus site-generated traffic volumes (from Figure 5).

## LEVEL OF SERVICE ANALYSIS

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection and is indicated on a scale from "A" to "F." LOS A is indicative of little congestion or delay. LOS F indicates a high level of congestion or delay. Table 2 shows the level of service delay ranges for signalized and unsignalized intersections.

**Table 2: Intersection Levels of Service Delay Ranges**

Level of Service	Signalized Intersections	Unsignalized Intersections
	Average Control Delay (seconds per vehicle)	Average Control Delay (seconds per vehicle) <sup>1</sup>
A	$\leq 10.0$	$\leq 10.0$
B	10.1 – 20.0	10.1 – 15.0
C	20.1 – 35.0	15.1 – 25.0
D	35.1 – 55.0	25.1 – 35.0
E	55.1 – 80.0	35.1 – 50.0
F	$\geq 80.1$	$\geq 50.1$

<sup>1</sup> For unsignalized intersections, if V/C is > 1.00, then LOS is LOS F regardless of the projected average control delay per vehicle

LOS values have been included in each figure for each turning movement/approach during the weekday morning and afternoon peak hours for the proposed site-access intersections and off-site intersections in the study area:

- Figure 3: 2020 Existing Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 6: 2023 Background + Site Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 7: 2040 Background Traffic, Lane Geometry, Traffic Control, and LOS
- Figure 8: 2040 Background + Site Traffic, Lane Geometry, Traffic Control, and LOS

LOS calculations for long-term scenarios were based upon the recommended lane geometries and traffic controls outlined in the figures above (which were based on recommended improvements in LSC's previously-conducted Meadowlake Ranch traffic study, dated May 19, 2019).

### Judge Orr Road/Eastonville Road/Meridian Ranch

#### Short Term

The intersection of Judge Orr/Meridian Ranch/Eastonville is currently all-way, stop-sign controlled (AWSC). All movements at this intersection currently operate at LOS C or better during both peak hours with the addition of site-generated traffic. No modifications would be required to this intersection during the short term.

#### Long Term

If the intersection of Judge Orr/Eastonville/Meridian Ranch remains AWSC, several turning movements and single-lane approaches would operate at LOS F during the peak hours, based on the projected long-term background and total volumes. However, if this intersection were either reconstructed as a modern roundabout or signalized, the intersection is projected to operate at LOS C and B during the 2040 morning and afternoon peak hours, respectively.

### **Eastonville Road/Copenhagen Road (Proposed North Site Access)**

#### Short Term

All individual turning movements and approaches are projected to operate at LOS C or better during the short-term as a two-way stop sign-controlled intersection during both peak hours. Please refer to Figure 6 for recommended lane configurations and LOS summaries at this intersection during the short-term scenario.

#### Long Term

Both the southeast-bound and northwest-bound approaches would operate at LOS E or F during both long-term peak hours if the intersection were to remain two-way stop sign-controlled. Given these LOS results, LSC prepared an analysis of this intersection assuming **roundabout** traffic control. Based on this analysis, all individual turning movements/approaches and the intersection overall would operate at LOS B or better. Note: although this analysis has been completed, this intersection may not be a good candidate for a roundabout or traffic signal control. Moreover, with increased delay in the future for this westbound left-turn movement during peak times, some of the volume shown here would likely shift and use the south access instead and make a right turn onto Judge Orr Road to travel to southbound Eastonville Road or westbound Meridian Ranch Boulevard.

### **Judge Orr Road/Proposed South Site Access**

#### Short-Term

All individual turning movements and approaches are projected to operate at LOS C or better during the short-term as a two-way stop sign-controlled intersection with the addition of an eastbound left-turn deceleration lane. Please refer to Figure 6 for recommended lane configurations and LOS summaries at this intersection during the short-term scenario.

#### Long Term

Both the southbound and northbound left-turning movements would operate at LOS E or F during the long-term afternoon peak hour, if the intersection were to be two-way stop sign-controlled. However, all individual turning movements/approaches and the intersection overall would operate at LOS B or better if this south access intersection were to be **roundabout-controlled** during the long term.

**Provide alternative solutions to the unsatisfactory LOS at the site access points as it appears that it is unlikely that there would be roundabout at each of the access points and the judge orr/eastonville intersection.**

### US Highway 24/Judge Orr Road

#### Short Term

Please state what the developers responsibility is regarding these improvements as the site is contributing to the traffic at this intersection. If you are to propose that the developer has no responsibility in these improvements provide sufficient justification in the narrative for review.

The intersection of US Hwy 24/Judge Orr is currently signalized. The *US 24 Access Control Plan* shows this intersection realigned to one of two alternate alignments that would provide an intersection angle closer to 90 degrees. All movements at this intersection are currently operating at LOS D or better during the peak hours. Short-term analysis assumes the proposed realignment has not yet been constructed, but that a southbound right-turn deceleration lane, a southbound right-turn acceleration lane, and an eastbound right-turn lane have been constructed. Based on the short-term total traffic volumes, all movements at this intersection are projected to operate at LOS D or better during the peak hours.

#### Long-Term

By 2040, it was assumed that this intersection would be realigned and both Judge Orr Road and US Hwy 24 would be widened to provide two through lanes in each direction. Based on the projected 2040 background and total traffic volumes and the lane geometry shown in Figure 7 and Figure 8, this intersection is projected to operate at an overall LOS D during the peak hours. Some of the minor movements are projected to operate at LOS E during the peak hours. These movements have projected delays in the LOS E range simply because of the likelihood of arrival at the traffic signal at the beginning of the red phase at an intersection with many phases and a long cycle length. This movement would not be considered "failing" since the volume-to-capacity ratio is less than 1.0. The justification is that to progress through traffic along an arterial corridor, the traffic signal offsets and left-turn and side street phase times have been adjusted to favor the through traffic band, which can often result in higher delay for the left-turn movements even though there is sufficient capacity for them.

### VEHICLE QUEUING

Please clarify this paragraph as it first mentions a southbound left and then an eastbound left. Also it appears to be repeated on the next page. Revise accordingly.

This section contains the projected 95th-percentile queues for the following turning movements:

- Judge Orr Road between Eastonville Road and the proposed south access
- Eastonville Road/Copenhagen Road/proposed north site access

Projected queue lengths have also been shown for other key turning movements at this intersection. Table 3 and Table 4 presents the projected short-term and long-term 95th-percentile queues for the southbound-left turning movement at the intersection of Eastonville Road/Copenhagen Road/proposed north site access. Synchro scenario queue reports indicated that the 95th-percentile eastbound-left turning-movement queues would not exceed the available stacking length during either short-term or long-term peak hour. Synchro queueing reports indicated a 95th-percentile queue length of 1 vehicle (25 feet) during all short- and long-term peak hours.

Table 4 present the 95<sup>th</sup>-percentile queues reported on the SimTraffic analysis reports. Both tables show the proposed back-to-back left-turn vehicle storage lengths and the available

stacking distance for the eastbound left-turn lane on Judge Orr Road. The 95<sup>th</sup>-percentile queues for the projected short-term background plus site-generated and 2040 background plus site-generated scenarios are shown in the tables.

Table 3 and Table 4 present the projected short-term and long-term 95th-percentile queues for the southbound-left turning movement at the intersection of Eastonville Road/Copenhagen Road/proposed north site access. Synchro scenario queue reports indicated that the 95<sup>th</sup>-percentile eastbound-left turning-movement queues would not exceed the available stacking length during either short-term or long-term peak hour. Synchro queueing reports indicated a 95<sup>th</sup> percentile queue length of 1 vehicle (25 feet) during all short- and long-term peak hours.

Reported queue length for auxiliary turn lanes in SimTraffic is generally limited by the turn-lane length. SimTraffic simply reports the maximum observed queue length during simulations.

### Judge Orr Road/Proposed South Site Access

Table 3 presents the projected short-term and long-term 95<sup>th</sup>-percentile queues for the eastbound-left turning movement at the intersection of Judge Orr Road/proposed south site access. Synchro scenario queue reports indicated that the 95<sup>th</sup>-percentile eastbound-left turning-movement queues would **not** exceed the available stacking length during either peak hour. Synchro queueing reports indicated a short-term 95<sup>th</sup>-percentile queue length of 25 feet in the morning and afternoon peak hours, (assuming TWSC traffic control remains). During the long term, the 95<sup>th</sup>-percentile queue length would remain approximately 25 feet during both peak hours (assuming roundabout traffic control).

**Table 3: 95<sup>th</sup>-Percentile Queues**  
**Judge Orr Road/Proposed South Site Access – Eastbound-Left Turning Movement**

Major Street	Judge Orr Road	
Minor Street	Proposed South Site Access	
Turning Movement	Eastbound Left	
Analysis Period	A.M. Peak	P.M. Peak
<b>Existing + Site (Two-Way Stop Sign Control)</b>		
Storage Length (ft)	385'	385'
Taper Length (ft)	200'	200'
95 <sup>th</sup> -Percentile Queue (ft)	25'	25'
<b>2040 Background + Site (Roundabout)</b>		
Storage Length (ft)	-	-
Taper Length (ft)	-	-
95 <sup>th</sup> -Percentile Queue (ft)	25'	25'
Note: Synchro assumes queue length per average vehicle is 25 ft		

### Eastonville Road/Copenhagen Road/Proposed North Site Access

Table 4 presents the projected short-term and long-term 95<sup>th</sup>-percentile queues for the southbound-left turning movement at the intersection of Eastonville Road/Copenhagen Road/proposed north site access. Synchro scenario queue reports indicated that the 95<sup>th</sup>-percentile eastbound-left turning-movement queues would **not** exceed the available stacking length during either short-term or long-term peak hour. Synchro queueing reports indicated a 95<sup>th</sup>-percentile queue length of 1 vehicle (25 feet) during all short- and long-term peak hours.

**Table 4: 95th-Percentile Queues (2040 Background + Site)**  
**Southbound Left-Turn Lane**

Major Street	Eastonville Road	
Minor Street	Proposed North Site Access	
Turning Movement	Southbound Left	
Analysis Period	A.M. Peak	P.M. Peak
<b>Existing + Site (Two-Way Stop Sign Control)</b>		
Storage Length (ft)	160'	160'
Taper Length (ft)	155'	155'
95 <sup>th</sup> -Percentile Queue (ft)	25'	25'
<b>2040 Background + Site (Roundabout)</b>		
Storage Length (ft)	-	-
Taper Length (ft)	-	-
95 <sup>th</sup> -Percentile Queue (ft)	25'	25'

Note: Synchro assumes queue length per average vehicle is 25 ft

### AUXILIARY TURN-LANE ANALYSIS, INTERSECTION CONFIGURATION, AND TRAFFIC CONTROL

#### Judge Orr Road/Proposed South Site Access

#### Eastbound Approach

for each of the Auxiliary turn lanes please indicate the design speed being utilized for the turn lane lengths provided.  
Also please discuss Aux. turn lanes at the proposed roadways

According to the El Paso County *Engineering Criteria Manual* (ECM), exclusive left-turn lanes shall be provided for any access on a Minor Arterial or Collector with a projected peak-hour ingress turning volume of 25 vehicles per hour (vph) or greater. The projected left-turn volume at the south site-access point is expected to exceed the minimum left-turn volume thresholds prescribing a turn lane outlined in the *ECM* upon site buildout. LSC recommends the following eastbound left-turn deceleration turn lane:

- 235-foot deceleration lane
- 200-foot approach taper
- 150 feet for storage (per ECM Table 2-30, with a DHV between 121-180 vehicles per hour)
- 45:1 redirect taper length

### Westbound Approach

According to the El Paso County *Engineering Criteria Manual* (ECM), exclusive right-turn lanes shall be provided for any access on a Minor Arterial or Collector with a projected peak-hour ingress turning volume of 50 vehicles per hour (vph) or greater. The projected right-turn volume at the south site access point is expected to exceed the minimum right-turn volume thresholds prescribing a turn lane outlined in the *ECM* upon site buildout. LSC recommends the following westbound right-turn deceleration turn lane:

- 235-foot deceleration lane
- 200-foot approach taper

### **Eastonville Road/Proposed North Site Access**

#### Southwest Approach

Eastonville Road is currently striped with a painted center two-way left-turn lane (TWLTL). The projected left-turn volume at the north site access point is expected to exceed the minimum left-turn volume thresholds prescribing a turn lane outlined in the *ECM* upon site buildout. LSC recommends the existing TWLTL be restriped for the following southwest-bound left-turn deceleration turn-lane dimensions:

- 155-foot deceleration lane
- 160-foot approach taper
- 50 feet for storage (per ECM Table 2-30, with a DHV less than 60 vehicles per hour)

#### Northeast Approach

north

According to the El Paso County *Engineering Criteria Manual* (ECM), exclusive right-turn lanes shall be provided for any access on a Minor Arterial or Collector with a projected peak-hour ingress turning volume of 50 vehicles per hour (vph) or greater. The projected right-turn volume at the south site access point is expected to exceed the minimum right-turn volume thresholds prescribing a turn lane outlined in the *ECM* upon site buildout. LSC recommends the following westbound right-turn deceleration turn lane:

- 155-foot deceleration lane
- 160-foot approach taper

See previous  
comment on page 9

#### US Highway 24/Judge Orr Road

Auxiliary turn lanes are planned to be added at this intersection as part of El Paso County intersection improvement project C14. This roadway improvement project has been identified as being needed by the year 2040 per Map 13 and Table 4 of El Paso County's 2016 MTCP:

- C14 – Judge Orr Road from Eastonville Road to Peyton Highway (\$38,248,000)
- Existing conditions – 2-lane Rural Minor Arterial
- Future conditions – 4-lane Rural Minor Arterial

Please use County standard nomenclature for the anticipated classification of the internal roadways.

As such, no modifications would be required by the applicant at the intersection of US Hwy 24/Judge Orr as a result of additional site-generated traffic from this development.

### Judge Orr Road/Meridian Ranch Boulevard/Eastonville Road

No modifications to existing auxiliary turn lanes would be required at the intersection of Eastonville/Judge Orr/Meridian Ranch following site buildout.

#### ROADWAY CLASSIFICATIONS

will

All internal roadways within the Judge Orr Eastonville Commercial Center development are proposed to be Urban streets. The county may require internal streets to be constructed to County standards (ECM Table 2-5 presents a summary of roadways design standards).

#### COUNTY ROAD IMPROVEMENT FEE PROGRAM

Based on the peak hour volumes provided at the intersection it appears that Auxiliary turn lane improvements may be required per criteria . Please address.

#### Transportation Impact Fees

Also please discuss whether any of the existing turn lanes require any modifications.

Per ECM Appendix B: *State what the current applicable Transportation Impact Fees are and what option the developer will be selecting for payment.*

The applicant will be required to participate in this program. The PID option will be identified with a future Preliminary Plan/Plat submittal.

#### Reimbursable Improvements

Please include the MTCP maps/tables listed in your report

The following roadway improvement projects have been identified as being needed by the year 2040 per Map 13 and Table 4 of El Paso County's 2016 MTCP:

- C14 – Judge Orr Road from Eastonville Road to Peyton Highway (\$38,248,000)
- Existing conditions – 2-lane Rural Minor Arterial
- Future conditions – 4-lane Rural Minor Arterial
- U19 – Eastonville Road from McLaughlin Road to Latigo Boulevard (\$18,420,000)
- Existing conditions (note: some sections following PRTA improvements) – 2-lane Rural Unimproved County Road
- Future conditions – 2-lane Rural Minor Arterial

### MULTI-MODAL TRANSPORTATION AND TDM OPPORTUNITIES

The following roadway improvement projects have been identified as being needed by the year 2040 per Map 15 and Table 5 of El Paso County's 2016 MTCP:

- M8 – Judge Orr Road from Eastonville Road to South Peyton Highway
- Bicycle improvements (2.98 miles)

## FINDINGS AND CONCLUSIONS

- The site is projected to generate about 6,798 new driveway vehicle-trips on the average weekday.
- During the weekday morning peak hour of adjacent street traffic, 191 vehicles would enter the site while 132 vehicles would exit.
- During the weekday afternoon peak hour of adjacent street traffic, 359 vehicles would enter the site while 383 vehicles would exit.
- All individual approaches and turn lanes at both site-access intersections would operate at LOS C or better during both short-term peak hours as two-way stop sign-controlled intersections. During the long term, however, LSC recommends that both site access point intersections be converted to roundabouts in order to operate at acceptable levels of service. Please refer to the "Level of Service" section above for detailed LOS results and discussion regarding all study area intersections.
- Auxiliary left-turn and right-turn deceleration lanes would be required at both site-access points based on projected buildout traffic volumes. Please refer to the "Auxiliary Turn-Lane Analysis" section for evaluation of potential turn-lane needs.
- All internal site access roadways are proposed to be Urban streets.
- Please refer to the "Queuing Analysis" section above for additional details. Synchro queue reports indicated that the 95<sup>th</sup> percentile left-turn queue at both site access points is **not** projected to exceed the recommended turn-lane lengths during either peak hour.

Please include the reports

\* \* \* \* \*

Please list all deviations that are being proposed.

Please contact me if you have any questions regarding this report.

Respectfully Submitted,

LSC TRANSPORTATION CONSULTANTS, INC.

## Intersection Summary

Area Type: Other

Cycle Length: 70

Actuated Cycle Length: 70

Offset: 0 (0%), Referenced to phase 2:NETL and 6:SWTL, Start of Green

Natural Cycle: 65

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.57

Intersection Signal Delay: 12.2

Intersection LOS: B

Intersection Capacity Utilization 71.6%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 1: Eastonville Rd &amp; Judge Orr Rd/Meridian Ranch Rd

## Intersection Summary

Area Type: Other

Cycle Length: 70

Actuated Cycle Length: 70

Offset: 0 (0%), Referenced to phase 2:NETL and 6:SWTL, Start of Green

Natural Cycle: 60

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.58

Intersection Signal Delay: 11.7

Intersection LOS: B

Intersection Capacity Utilization 70.8%

ICU Level of Service C

Analysis Period (min) 15

Splits and Phases: 1: Eastonville Rd &amp; Judge Orr Rd/Meridian Ranch Rd

Lanes, Volumes, Timings  
2: US 24 & Judge Orr Rd

Based on the peak hour volumes provided at the intersection it appears that Auxiliary turn lane improvements may be required per criteria . Please address.  
Also please discuss whether any of the existing turn lanes require any modifications.
