APPLICANT INFORMATION

Company: HR Green

Name: Phil Stuepfert

☐ Owner ☐ Consultant ☐ Contractor

Mailing Address: 7222 Commerce Center Drive, Suite 220

Colorado Springs, CO 80919

Phone Number: 720-602-4941

FAX Number:

Email Address: pstuepfert@hrgreen.com

ENGINEER INFORMATION

Company: LSC Transportation Consultants, Inc.

Name: Jeffery C. Hodsdon Colorado P.E. Number: 31684

Mailing Address: 2504 East Pikes Peak Avenue, Suite 304

Colorado Springs, CO 80909

Phone Number: (719) 633-2868 FAX Number: (719) 633-5430 Email Address: jeff@lsctrans.com

PCD File No. DEV-21-001

OWNER, APPLICANT, AND ENGINEER DECLARATION

To the best of my knowledge, the information on this application and all additional or supplemental documentation is true, factual and complete. I am fully aware that any misrepresentation of any information on this application may be grounds for denial. I have familiarized myself with the rules, regulations and procedures with respect to preparing and filing this application. I also understand that an incorrect submittal will be cause to have the project removed from the agenda of the Planning Commission, Board of County Commissioners and/or Board of Adjustment or delay review until corrections are made, and that any approval of this application is based on the representations made in the application and may be revoked on any breach of representation or condition(s) of approval.

DEVIATION REQUEST (Attach diagrams, figures, and other documentation to clarify request)

A deviation from the standards of or in Section 2.2.5.C (and 2.3.2) of the Engineering Criteria Manual (ECM) is requested. The request is for a full-movement intersection on the proposed Rex Road 575 feet east of Eastonville Road (centerline spacing). The proposed plan for Grandview Reserve Phase 1 is to extend a public street south from Rex Road at this location to serve as one of the access points to this relatively large development. Given this proposed spacing, the intent would be that this intersection would be a T intersection with a street on the south side only. Please refer to the attached exhibits. Also, please refer to the TIS report prepared for this project for additional information.

L

Identify the specific ECM standard which a deviation is requested:

2.2.5.C Roadway Access Criteria - Urban Minor Arterial Access Criteria

2.3.2 Design Standards by Classification Table 2-6 Intersection spacing on an Urban Minor Arterial is 1/4 mile (1,320 feet)

State the reason for the requested deviation:

The deviation is needed to provide access to the phase 1 planned development areas south of Rex Road between Eastonville Road and a drainage channel which crosses Rex Road about 793 feet east of Eastonville Road.

Explain the proposed alternative and compare to the ECM standards (May provide applicable regional or national standards used as basis):

The deviation is to request a full-movement "T" intersection about 576' feet east of Eastonville Road (centerline to centerline). This is about 744 feet less than the *ECM* standard. The proposed plan for Grandview Reserve Phase 1 is to extend a public street south from Rex Road at this location to serve as one of the access points to this relatively large development. Given this proposed spacing, the intent would be that this intersection would be a T intersection with a street on the south side only. The proposal is that future access to the property to the north from Rex Road would be via an offset T intersection located approximately 600 feet to the east of the proposed phase 1 access intersection. Also, that a potential future right-in access to Eastonville north of Rex would also provide entry capability for motorists entering a future development NE of Rex/Eastonville from the southwest or west via northbound Eastonville or eastbound Rex. The proposed site plan is shown in Exhibit 1.

LIMITS OF CONSIDERATION

(At least one of the conditions listed below must be met for this deviation request to be considered.)

| ☐ The <i>ECM</i> standard is inapplicable to the particular situation. |
|---|
| ☑ Topography, right-of-way, or other geographical conditions or impediments impose an undue hardship and an equivalent |
| alternative that can accomplish the same design objective is available and does not compromise public safety or accessibility. |
| ☐ A change to a standard is required to address a specific design or construction problem, and if not modified, the standard wi |
| impose an undue hardship on the applicant with little or no material benefit to the public. |

Provide justification:

The deviation is needed to provide access to the parcels south of Rex Road between Eastonville Road and a 100-foot wide drainage channel which crosses Rex Road about 672 feet east of Eastonville Road. Exhibit 2 shows the existing wetlands area and Exhibit 3 shows the location of the proposed drainage channel. The alignments of the proposed future street south of Rex and the potential future street extending north from Rex into the adjacent property to the north (and thus the intersection locations with Rex Road) are constrained as shown in these two exhibits.

CRITERIA FOR APPROVAL

Per ECM section 5.8.7 the request for a deviation may be considered if the request is <u>not based exclusively on financial</u> <u>considerations</u>. The deviation must not be detrimental to public safety or surrounding property. The applicant must include supporting information demonstrating compliance with <u>all of the following criteria</u>:

The deviation will achieve the intended result with a comparable or superior design and quality of improvement.

The intersection is proposed to be designed as a "T" intersection in perpetuity. Should access be needed in the future for parcels north of Rex Road, a second "T" intersection could be located east of the currently proposed intersection. This offset "T" configuration would not require back-to-back left-turn lanes between Eastonville Road and the first (the subject) intersection. As shown in Exhibit 4 the proposed 575' spacing would be able to accommodate the projected left-turn queue approaching Eastonville Road. The proposed 600' between the offset T intersections, would allow for adequate back-to-back left-turn lanes between the intersections.

The deviation will not adversely affect safety or operations.

- The proposed intersection location meets the *ECM* criteria for intersection sight distance and stopping sight distance. See the attached Exhibit 5.
- The projected level of service C for the Stop-sign controlled northbound left turn would meet *ECM* standards.
- The left-turn auxiliary turn lanes between Eastonville and the potential future north side T intersection would accommodate the projected queues. The left-turn lanes between the offset T intersections (east of the proposed access would meet ECM standards for deceleration distance plus stacking. The shared transition taper is proposed at a reduced 75' from the standard 160' to maximize stacking and deceleration distance. Plus, with the taper being within the horizontal curve of Rex, the abbreviated taper will minimize drift of through vehicles into the turn lane. If the Rex/Eastonville intersection is constructed as a modern roundabout, a westbound left-turn lane on Rex would not be needed. If a conventional intersection is constructed, the westbound left-turn lane at 375' plus a 75' transition taper would accommodate the projected maximum projected queue of 193 feet (taken from the TIS report) plus the standard 155 feet of turn-lane length.
- The proposed offset T intersections will be easier for drivers to navigate and will have fewer conflict points than one four-leg intersection one-quarter mile east of Eastonville.

The deviation will not adversely affect maintenance and its associated cost.

The deviation will not impact maintenance costs. The street cross sections and intersection radii/corners will be built to County standards

The deviation will not adversely affect aesthetic appearance.

The deviation will not impact aesthetic appearance. The street cross sections and intersection radii/corners will be built to County standards

The deviation meets the design intent and purpose of the ECM standards.

The proposed intersection spacing will not impact turn-lane design as the site-specific condition with two T-intersections reduces needed distance. The proposed intersection location can meet the required intersection and stopping sight distances.

as shown in Exhibit 5.

| N/A The project will meet water quality and MS4 pellocation. | | |
