PCD File No. CDR-22-015

Engineer's Statement:

The attached drainage plan and report were prepared under my direction and supervision and are correct to the best of my knowledge and belief. Said drainage report has been prepared according to the criteria established by the County for drainage reports and said report is in conformity with the applicable master plan of the drainage basin. I accept responsibility for any liability caused by any negligent acts, errors or omissions on my part in preparing this report.

I. General Purpose, Location and Description

a. Purpose

The purpose of this Final Drainage Report (FDR) for Peaceful Ridge at Fountain Valley is to describe the onsite and offsite drainage patterns, size drainage infrastructure to safely capture and convey developed runoff to water quality and detention facilities, and to safely route detained stormwater to adequate outfalls.

b. Location

Peaceful Ridge at Fountain Valley, referred to as 'the site' herein, is to be developed as a single-family residential subdivision. The stie lies within the Southeast ¼ Section 15, Township 15 South, Range 65 West of the 6th Principal Meridian, in El Paso County, Colorado. The property is approximately 60.14 acres of which 2.34 acres will be dedicated as additional right-of-way along Marksheffel Road. The site is bound to the north by unplatted land which will be future Bradley Ridge subdivision, to the east by Marksheffel Road, to the south by Cottonwood Meadows Filing No. 3 and to the west by unplatted land. A vicinity map is presented in Appendix A.

c. Description of Property

The property is currently undeveloped and platted as Peaceful Ridge at Fountain Valley subdivision with 255 single-family lots, a detention basin tract and roadway rights-of-way. The construction plans for the overall site were previously approved by the County and are being refreshed to current County and District standards. With the update, three lots will be incorporated into the detention basin tract. Access to the development will be provided at Marksheffel Road at the northeast corner of the site with the construction of Peaceful Ridge Drive. Secondary access will be provided with the extension of Sleepy Meadows Drive at the southwest corner of the site.

The site generally slopes to the southeast at approximately 6%. There are no major drainageways or irrigation facilities that traverse the site. The vegetation consists primarily of native grasses and weeds. Per a NRCS web soil survey, the site's soil is comprised of Kim Loam (#43) which is classified within Hydrologic Soil Group B. A small portion of the site consists of Nelson-Tassel Fine Sandy Loams, Razor-Midway Complex and Stoneham Sandy Loam. These soils are classified as Hydrologic Soil Groups C and D.

There are no existing utilities on the site, however there are existing utilities in Marksheffel right-of-way adjacent to the east side of the site, including watermain, sanitary sewer, storm sewer, fiber optic, electric lines.

d. Floodplain Statement

Based on FEMA FIRM 08041C0957G December 7, 2018, the site is Zone X, which are areas determined to be outside the 0.2% annual chance flood. The map has been presented in Appendix A.

II. Drainage Design Criteria

a. Drainage Criteria

Hydrologic data and calculations were performed using Drainage Criteria Manual Volume 1 of El Paso County (EPCDCM), with County adopted Chapter 6 and Section 3.2.1 of Chapter 13 of the City of Colorado Springs Drainage Criteria Manual (CCSDCM), May 2014 revised January 2021.

Onsite drainage improvements are designed for the 5-year storm (minor event) and 100-year storm (major event) using rainfall values from CCSDCM Table 6-2 below. Runoff was calculated per CCSDCM Section 6.3.0 - Rational Method. 5-year and 100-year runoff coefficients were determined from Table 6-6 of the CCSDCM Vol. 1. Private, full spectrum pond design was completed using the latest version of Mile High Flood District's (MHFD) UD-Detention per CCSDCM Section 13.3.2.1 – Private, full spectrum Detention. The detention pond allowable release rate will be limited to less than historic rates.

Table 6-2: Rainfall Depths for El Paso County		
Return Period (yr)	5	100
1-hr Rainfall Depth (in)	1.50	2.52

Inlets were sized per the methods described in EPCDCM Section III Chapter 7 – Street Drainage and Storm Water Inlets. Storm sewer was sized per the methods described in EPCDCM Section III Chapter 8 – Storm Drains and Appurtenances.

III. Drainage Basins and Subbasins

a. Previous Drainage Studies

The site is located within the Jimmy Camp Creek Drainage Basin. The site's drainage characteristics were previously studied in the following reports:

1. "Final Drainage Report for Cottonwood Meadows, Filing No. 1," prepared by HMS Group, LLC, approved November 4, 1999.
2. "Final Drainage Report for Cottonwood Meadows, Filings No. 2 and 3," prepared by HMS Group, LLC, approved May 31, 2000.
3. "Preliminary and Final Drainage Report, Peaceful Ridge at Fountain Valley Subdivision," prepared by Kiowa Engineering Corporation, approved October 17, 2006.
4. "Early Grading Drainage Report, Peaceful Ridge at Fountain Valley Subdivision," prepared by Kiowa Engineering Corporation, approved July 14, 2022. EGP-21-003.

According to the Cottonwood Meadows drainage reports, historic offsite Basin H-3 which consists of the western and southern portion of the site and a portion to the west of the site drained in a southeasterly direction onto the Cottonwood Meadows site prior to the development of Cottonwood Meadows. A trapezoidal channel in the back of the lots along the northern boundary line was constructed with the development of the Cottonwood Meadows property that now directs this offsite runoff to the east to Marksheffel Road. A total of Q_5 = 21 cfs Q_{100} = 62 cfs from Basin H-3 drains to the trapezoidal channel and discharges to the northeast corner of the Cottonwood Meadows development. According to the Cottonwood Meadows drainage reports, only historic runoff will be allowed to discharge to the trapezoidal channel. See Basin D-1 description for proposed runoff conditions to the existing trapezoidal channel.

b. Existing Subbasin Description

Basin E-1 contains approximately 27.76 acres of the northern portion of the site. Approximately Q_5 = 16.4 cfs Q_{100} = 41.5 cfs generated from this basin sheet flows to the east to a roadside ditch along Marksheffel Road. Runoff collected in this ditch travels to an existing 7' x' 4' concrete box culvert. Runoff intercepted by this culvert is directed under Marksheffel Road to the east and ultimately discharges to Jimmy Camp Creek.

Basin E-2 contains approximately 33.34 acres of the southern portion of the site. Approximately Q_5 = 18.6 cfs Q_{100} = 46.3 cfs generated from this basin sheet flows in a southeasterly direction along the south boundary line. Runoff collected in the channel travels to the east to Marksheffel Road and discharges into the roadway corridor west side ditch.

Basin OS-1 contains approximately 32.60 acres north of the site. Approximately Q_5 = 23.0 cfs Q_{100} = 16.4 cfs generated from this basin sheet flows in an easterly and southeasterly direction to the roadside ditch along Marksheffel. Runoff from this basin does not enter the site until it nearly reaches Marksheffel Road. Runoff channel flows to the south to an existing 7' x 4' concrete box culvert.

Basin OS-2 contains approximately 3.05 acres west of the site. Approximately Q_5 = 2.3 cfs Q_{100} = 6.0 cfs generated from this basin sheet flows in a southeasterly direction to Sleep Meadows Drive. Runoff gutter flows to the south towards Fontaine Boulevard.

Basin OS-3 contains approximately 13.50 acres north of the site along Marksheffel Road. Approximately Q_5 = 11.1 cfs Q_{100} = 28.6 cfs generated from this basin sheet flows in a southeasterly direction to the roadside ditch along Marksheffel. Runoff gutter flows to the south towards Fontaine Boulevard. Runoff channel flows to the south to an existing 7' x 4' concrete box culvert. The existing 24" culvert located in Basin OS-3 north of the Peaceful Ridge Drive and Marksheffel intersection will be removed. A proposed 24" FES will replace the culvert and tie into existing storm sewer within Marksheffel Road.

Basin OS-4 contains approximately 9.38 acres west and south of the site. Approximately Q_5 = 6.9 cfs Q_{100} = 18.4 cfs from this basin accumulate in a broad natural channel which convey runoff to the south and away from the site. Some flows enter the west side borrow ditch for Sleepy Meadows Drive at a point several hundred feet south of the site. Some of these flows enter the Fontaine Boulevard Roadway Corridor, and some of these flows enter the FMIC Ditch. Basin OS-4 is raw land and is heavily vegetated with native grasses and weeds.

c. Proposed Subbasin Description

Basin OS-1 will remain as described in the existing condition of Basin OS2. Stormwate
C1 and is captured by onsite storm sewer.

explain why the area decreased from 3.05 to 2.88 ac

Revised. Calculation was revised to be 3.05 acres in both existing and proposed conditions.

Basin A0 is 1.73 acres of proposed single family residential rear lots. Stormwater (Q_5 =
sheets flows across the rear of lots to DP1 within Bradley Ridge. Flows are captured w
conveyed to Pond 3. The Bradley Ridge drainage map is presented in Appendix E. Basin A0 is synonymous with Bradley Ridge Basin OS-3. Coordination is ongoing with Bradley Ridge to ensure the limits of Basin A0 are consistent. Per the approved EGP, Water Quality treatment for this basin is achieved by Infiltration Reduction Factoring within the rear yard areas. Calculations supporting treatment are presented in the IRF
3.

Engineer must confirm in the Drainage Report that the existing pond is functioning as intended.

The outlet structure and outfall piping has not yet been built yet on the existing pond. The outlet structure and proposed piping for the CD set will be installed in lieu of the structures shown on the EGP.

f proposed single family residential rear lots. Stormwater (Q_5 = 2.2 cfs Q_{100} = 4.4
e rear of lots to DP21. Flows are captured in a 24" FES at DP21 and piped to
ting storm sewer. Per the approved EGP, Water Quality treatment for this basin is
duction Factoring within the rear yard areas. Calculations supporting treatment are
dsheet in Appendix B.

Basin A1 is 2.62 acres of proposed single family residential and roadway. Stormwater (Q_5 = 5.0 cfs Q_{100} = 10.0 cfs) is conveyed in curb and gutter to DP3. Flows at DP3 are captured in a 20' Type R inlet (Public) and piped to Pond A.

Basin A2 is 3.61 acres of proposed single family residential and roadway. Stormwater (Q_5 = 6.9 cfs Q_{100} = 13.9 cfs) is conveyed in curb and gutter to DP4. Flows at DP4 are captured in a 15' Type R inlet (Public) and piped to Pond A. A total of Q_{100} = 2.5 cfs bypass DP4 and continue south to DP5.

Basin B1 is 4.88 acres of proposed single family residential and roadway. Stormwater (Q_5 = 11.0 cfs Q_{100} = 22.0 cfs) is conveyed in curb and gutter to DP5. Flows at DP5 are captured in a 20' Type R inlet (Public) and piped to Pond A. A total of Q_{100} = 5.8 cfs bypass DP5 and continue south to DP15.

Basin B2 is 4.68 acres of proposed single family residential and roadway. Stormwater (Q_5 = 9.6 cfs Q_{100} = 19.3 cfs) is conveyed in curb and gutter to DP15. Flows at DP15 are captured in a 15' Type R inlet (Public) and piped to Pond A. A total of Q_5 = 0.7 cfs, Q_{100} = 8.5 cfs bypass DP15 and continue south to DP16.

Basin B2.1 is 1.29 acres of proposed single family residential and roadway. Stormwater (Q_5 = 2.8 cfs Q_{100} = 5.7 cfs) is conveyed in curb and gutter to DP16. Flows at DP16 are captured in a 15' Type R sump inlet (Public) and piped to Pond A.

Basin B3 is 4.88 acres of proposed single family residential and roadway. Stormwater (Q_5 = 9.4 cfs Q_{100} = 19.0 cfs) is conveyed in curb and gutter to DP14. Flows at DP14 are captured in a 20' Type R inlet (Public) and piped to Pond A. A total of Q_{100} = 3.7 cfs bypass DP14 and continue east to DP16.

Basin B4 is 4.66 acres of proposed single family residential and roadway. Stormwater (Q_5 = 9.8 cfs Q_{100} = 19.6 cfs) is conveyed in curb and gutter to DP13. Flows at DP13 are captured in a 20' Type R inlet (Public) and piped to Pond A. A total of Q_{100} = 4.3 cfs bypass DP13 and continue east to DP14.

Basin B5 is 5.93 acres of proposed single family residential and roadway. Stormwater (Q_5 = 11.9 cfs Q_{100} = 23.9 cfs) is conveyed in curb and gutter to DP12. Flows at DP12 are captured in a 20' Type R inlet (Public) and piped to Pond A. A total of Q_5 = 0.1 cfs, Q_{100} = 6.2 cfs bypass DP12 and continue east to DP13.

Basin B6 is 2.38 acres of proposed single family residential and roadway. Stormwater (Q_5 = 4.6 cfs Q_{100} = 9.7 cfs) is conveyed in curb and gutter to DP10. Flows at DP10 are captured in a 10' Type R inlet (Public) and piped to Pond A. A total of Q_{100} = 0.7 cfs bypass DP10 and continue southeast to DP11.

Basin B7 is 4.19 acres of proposed single family residential and roadway. Stormwater (Q_5 = 8.2 cfs Q_{100} = 16.4 cfs) is conveyed in curb and gutter to DP11. Flows at DP11 are captured in a 20' Type R inlet (Public) and piped to Pond A. A total of Q_{100} = 3.8 cfs bypass DP11 and continue southeast to DP12.

Basin B8 is 1.14 acres of proposed single family residential and roadway. Stormwater (Q_5 = 2.5 cfs Q_{100} = 5.0 cfs) is conveyed in curb and gutter to DP9. Flows at DP9 continue in curb and gutter to DP11 and are captured in a 20' Type R inlet (Public) and piped to Pond A.

Basin B9 is 2.44 acres of proposed single family residential and roadway. Stormwater (Q_5 = 4.8 cfs Q_{100} = 9.6 cfs) is conveyed in curb and gutter to D18. Flows at DP18 are captured in a 15' Type R sump inlet (Public) and piped to Pond A.

Basin B10 is 1.47 acres of proposed single family residential and roadway. Stormwater (Q_5 = 2.6 cfs Q_{100} = 5.3 cfs) is conveyed in curb and gutter to D18. Flows at DP18 are captured in a 15' Type R sump inlet (Public) and piped to Pond A.

Revised. A new proposed channel will be built along the south side of the Peaceful Ridge site since the existing channel is unstable.

Revise to include what stabilization is being recommended.

Basin B11 is 1.39 acres of drainage tract and full spectrum detention area. Stormwater (Q_5 = 3.7 cfs Q_{100} = 7.4 cfs) sheet flows directly to the pond at DP19.

Basin C1 is 3.85 acres of proposed single family residential and roadway. Stormwater (Q_5 = 7.9 cfs Q_{100} = 15.9 cfs) is conveyed in curb and gutter to DP8. Flows at DP8 are captured in a 20' Type R inlet (Public) and piped to Pond A. A total of Q_{100} = 4.5 cfs bypass DP8 and continue south in Sleepy Meadows Drive curb and gutter.

Basin D1 is 2.73 acres of proposed single family residential. Stormwater (Q_5 = 5.4 cfs Q_{100} = 10.9 cfs) sheet flows to the existing channel along the southern property boundary with the Cottonwood Meadows subdivision. This is the historic drainage condition for the basin per the Early Grading Drainage Report, Peaceful Ridge at Fountain Valley Subdivision (EGP FDR). Runoff intercepted by this channel will flow to the east to the roadside ditch along Marksheffel. Flows will continue southerly in the roadside ditch along Marksheffel. Water Quality Treatment for Basin D1 is achieved in the rear yard areas. Calculations are presented in Appendix D. Hydraulic analysis for the existing channel is presented in Appendix C.

easement

Revised

Appendix B

The existing channel has been encroached upon by the Cottonwood Meadows homeowners and is potentially unstable. Recommended improvements would be to re-grade the existing channel and to provide stabilization at the existing discharge point in the Marksheffel roadside ditch. In order to prevent future issues, Cottonwood Meadows HOA and El Paso County must enforce homeowners to not develop within the existing 20' ROW and utility easement along the Cottonwood Meadows northern boundary. See Appendix C for the recommended cross section for the existing channel.

Revise to identify how this subdivision's flow is flowing to Marksheffel Rd. Per ECM 3.2.4 a suitable outfall is necessary for developed flow, and that means a hydraulically adequate channel. Work with the Cottonwood Meadows neighbors to construct the recommended channel cross section.

Basin D2 is 1.33 acres of proposed single family residential. Stormwater (Q_5 = 2 flows to the proposed swale along Marksheffel. Runoff intercepted by this swale existing 7' x 4' box culvert (DP22). Runoff intercepted by this culvert is directed east and ultimately discharges to Jimmy Camp Creek. Water Quality Treatment the rear yard areas. Water quality calculations are presented in Appendix D. Hy roadside ditch is presented in Appendix C.

Revised

Appendix B

Basin D3 is 1.27 acres of proposed single family residential. Stormwater (Q_5 = 2 flows to the proposed swale along Marksheffel. Runoff intercepted by this swale along Marksheffel to DP23 and offsite. Water Quality Treatment for Basin D3 is areas. Water quality calculations are presented in Appendix D. Hydraulic analysis for the roadside ditch is presented in Appendix C.

Revised

Revised. A new proposed channel will be built along the south side of the Peaceful Ridge site since the existing channel is unstable.

Basin D4 is 0.92 acres of undeveloped area and a portion of Marksheffel Road. St = 3.6 cfs) sheet flows to the proposed swale ditch along Marksheffel. Runoff interc continue south to an existing 7' x 4' box culvert (DP22). Runoff intercepted by this Marksheffel Road to the east and ultimately discharges to Jimmy Camp Creek. Pe

EPC ECM

EPCDCM Appendix I, Basin D4 can be excluded from the water quality and detention standard.

Revised

Basin D5 is 2.40 acres of undeveloped area and a portion of Marksheffel Road. Stormwater (Q_5 = 3.3 cfs Q_{100} = 7.3 cfs) sheet flows to the existing roadside ditch along Marksheffel. Runoff intercepted by this swale will continue south ditch along Marksheffel to DP23 and offsite. Per Section I.7.1.B.7 of the EPCDCM Appendix I, Basin D5 can be excluded from the water quality and detention standard.

Revised

Basin D6 is 0.17 acres of Peaceful Ridge Drive. Stormwater (Q_5 = 0.8 cfs Q_{100} = 1.4 cfs) flows in curb & gutter to a riprap rundown to DP21. Flows are captured in a proposed 24" FES at DP21 and piped to Jimmy Camp

Discuss whether flow destination will remain the same or if it is being diverted.

Revised. Flow will be diverted to directly connect to drainage under Marksheffel using an existing box culvert that was built to take this flow and bypass the currently undersized culvert that is further south.

I.7.1.C.1 Revised.

creek in existing storm sewer. Per Section I.7.1.B.2 of the EPCDCM Appendix I, Basin D6 can be excluded from the water quality and detention standard. The total paved area excluded from water quality and detention is 0.55 acres from Basin D6-D8.

Basin D7 is 0.16 acres of Peaceful Ridge Drive. Stormwater (Q_5 = 0.7 cfs Q_{100} = 1.3 cfs) flows in curb & gutter to a riprap rundown to the swale along Marksheffel. Runoff intercepted by this swale will continue south to an existing 7' x 4' box culvert (DP22). Runoff intercepted by this culvert is directed under Marksheffel Road to the east and ultimately discharges to Jimmy Camp Creek. Per Section I.7.1.B.2 of the EPCDCM Appendix I, Basin D7 can be excluded from the water quality and detention standard. The total paved area excluded from water quality and detention is 0.55 acres from Basin D6-D8.

Revised.

Basin D8 is 0.32 acres of Sleep Meadows Drive. Stormwater (Q_5 = 1.1 cfs Q_{100} = 2.1 cfs) flows in curb & gutter southerly offsite, per the approved EGP FDR. Per Section I.7.1.B.2 of the EPCDCM Appendix I, Basin D7 can be excluded from the water quality and detention standard. The total paved area excluded from water quality and detention is 0.55 acres from Basin D6-D8.

Revised.

Basin JC5 is a MDDP basin shown for reference only. The existing 24" RCP culvert that is located within this basin at the intersection of Peaceful Ridge Drive and Marksheffel Road will be removed and replaced with a 24" FES.

IV. Drainage Facility Desi

Update narrative to explicitly state what improvements have already been constructed with the EGP that was approved. Explain why changes are being proposed now if proposing on building pond with submitted calculations.

a. General Concept

Peaceful Ridge at Fountain Valley storm water
full spectrum water quality and detention pond.
the detention pond have been addressed with water quality exclusions from EPCDCM Appendix I. The full spectrum water quality and detention pond will discharge at less than historic rates.

b. Water Quality & Detention

Pond A

The outlet structure and outfall piping has not yet been built yet on the existing pond. The outlet structure and proposed piping for the CD set will be installed in lieu of the structures shown on the EGP.

Water quality and detention for proposed Basins OS1, C1 and B
quality and detention pond: Pond A. A total of 52.29 acres at 41.
pond. The WQCV is 0.803 ac-ft, the EURV is 1.494 ac-ft, and th
EURV and 100-year storms are released in 40, 72 and 72 hours
outfall into the pond and a 2.0' trickle channel conveys flow towa
maintenance road is provided to the bottom of the pond to facilita
overflow spillway is provided that conveys the developed, peak 100-yr flow rate with 1.0' of freeboard towards Marksheffel Road. The spillway will be lined with Type L riprap. Pond design calculations are presented in Appendix D.

The pond's outfall will be constructed within the right-of-way for Marksheffel Road. A Work-in-the-ROW permit will be required before construction can commence.

Water quality for Basins A0, A0.1, D1, D2 & D3 will be provided by Runoff Reduction methods. Mile High Flood District's Stormwater Management Practice Design Workbook (Version 3.07, November 2016) workbook was used to calculate the reduction and is presented in Appendix B.

Water quality for Basins D6-D8 has been excluded per Section I.7.1.B.2 of the EPCDCM Appendix I.

I.7.1.C.1 Revised.

c. Inspection and Maintenance

The private detention pond is to be owned and maintained by the Peaceful Ridge at Fountain Valley HOA. Maintenance access for the full spectrum detention facilities will be provided from public Right-of-Way.

d. Four Step Method to Minimize Adverse Impacts of Urbanization

Step 1 – Reducing Runoff Volumes: Low impact development (LID) practices are utilized to reduce runoff at the source. In general, stormwater discharges are routed across pervious areas prior to capture in storm sewer. This practice promotes infiltration and reduces peak runoff rates. The Runoff Reduction Factor method was used and is presented in Appendix B.

Step 2 – Treat and slowly release the WQCV: This step utilizes full spectrum water quality and detention to capture the WQCV and slowly release runoff from the site. Onsite full spectrum detention pond provides water quality treatment for the site. The WQCV is released over a period of 40 hours while the EURV releases over a period of 72 hours. Areas that couldn't be routed to the pond will employ runoff reduction measures to achieve water quality treatment.

Step 3 – Stabilize stream channels: This step establishes practices to stabilize drainageways and provide scour protection at stormwater outfalls. Erosion protection is provided at all concentrated stormwater discharge points in the form of riprap pads.

Step 4 – Consider the need for source controls: No industrial or commercial uses are proposed within this development and therefore no source controls are proposed.

e. Drainage and Bridge Fees

Drainage basin and bridge fees for Peaceful Ridge at Fountain Valley Subdivision were paid at time of platting.

f. Opinion of Probable Cost

An engineer's opinion of probable is presented in Appendix E.

g. Hydraulic Grade Line Analysis

A hydraulic grade line analysis of the proposed storm sewer is presented in Appendix C.

V. Summary

Peaceful Ridge at Fountain Valley Subdivision lies within the Jimmy Camp Creek Drainage Basin. Water quality and detention for the site is provided in a full spectrum water quality and detention ponds. The water quality and detention pond will be maintained by the Peaceful Ridge at Fountain Valley HOA. All drainage facilities were sized per the El Paso County Drainage Criteria Manuals.

VI. Drawings

Please refer to the appendices for vicinity and drainage basin maps.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Totals for Area of Interest			**64.1**	**100.0%**

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles and Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations table in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations table should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures**. Refer to section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures for this jurisdiction.

The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 13. The **horizontal datum** was NAD83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the **North American Vertical Datum of 1988 (NAVD88)**. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at http://www.ngs.noaa.gov/ or contact the National Geodetic Survey at the following address:

NGS Information Services
NOAA, N/NGS12
National Geodetic Survey
SSMC-3, #9202
1315 East-West Highway
Silver Spring, MD 20910-3282

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at (301) 713-3242 or visit its website at http://www.ngs.noaa.gov/.

Base Map information shown on this FIRM was provided in digital format by El Paso County, Colorado Springs Utilities, and Anderson Consulting Engineers, Inc. These data are current as of 2008.

This map reflects more detailed and up-to-date **stream channel configurations and floodplain delineations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study Report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map. The profile baselines depicted on this map represent the hydraulic modeling baselines that match the flood profiles and Floodway Data Tables if applicable, in the FIS report. As a result, the profile baselines may deviate significantly from the new base map channel representation and may appear outside of the floodplain.

Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** *for an overview map of the county* showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact **FEMA Map Service Center** (MSC) via the FEMA Map Information eXchange (FMIX) 1-877-336-2627 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study Report, and/or digital versions of this map. The MSC may also be reached by Fax at 1-800-358-9620 and its website at http://www.msc.fema.gov/.

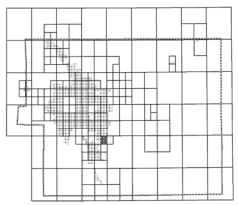
If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at http://www.fema.gov/business/nfip.

El Paso County Vertical Datum Offset Table

Flooding Source	Vertical Datum Offset (ft)

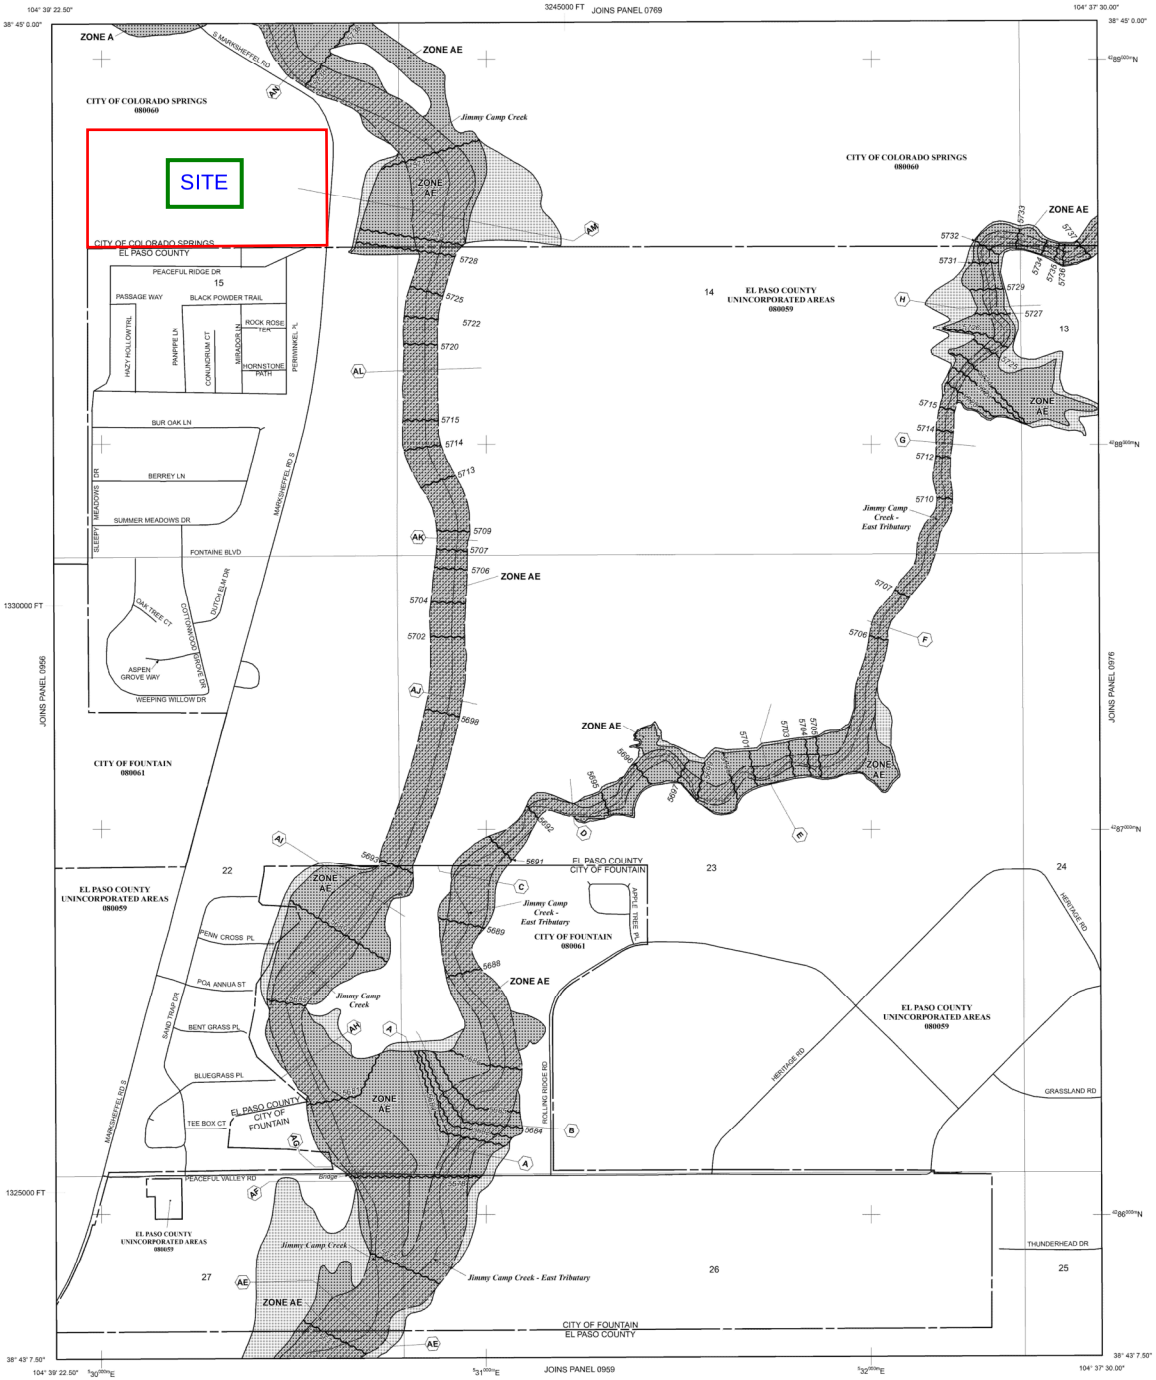
REFER TO SECTION 3.3 OF THE EL PASO COUNTY FLOOD INSURANCE STUDY FOR STREAM BY STREAM VERTICAL DATUM CONVERSION INFORMATION

Panel Location Map



This Digital Flood Insurance Rate Map (DFIRM) was produced through a Cooperating Technical Partner (CTP) agreement between the State of Colorado Water Conservation Board (CWCB) and the Federal Emergency Management Agency (FEMA).

Additional Flood Hazard information and resources are available from local communities and the Colorado Water Conservation Board.



NOTE: MAP AREA SHOWN ON THIS PANEL IS LOCATED WITHIN TOWNSHIP 15 SOUTH, RANGE 65 WEST.

LEGEND

SPECIAL FLOOD HAZARD AREAS (SFHAS) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

ZONE A No Base Flood Elevations determined.
ZONE AE Base Flood Elevations determined.
ZONE AH Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
ZONE AO Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
ZONE AR Special Flood Hazard Area Formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
ZONE A99 Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
ZONE V Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
ZONE VE Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

ZONE X Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

ZONE X Areas determined to be outside the 0.2% annual chance floodplain.
ZONE D Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

Floodplain boundary
Floodway boundary
Zone D Boundary
CBRS and OPA boundary
Boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
513 — Base Flood Elevation line and value; elevation in feet*
(EL 987) — Base Flood Elevation value where uniform within zone; elevation in feet*

FORMULAS:

$$t_i = \frac{0.395(1.1 - C_5)\sqrt{L}}{S^{0.33}} \qquad V = C_v S_w^{0.5}$$

Table 6-7. Conveyance Coefficient, C_v

Type of Land Surface	C_v
Heavy meadow	2.5
Tillage/field	5
Riprap (not buried)*	6.5
Short pasture and lawns	7
Nearly bare ground	10
Grassed waterway	15
Paved areas and shallow paved swales	20

*For buried riprap, select C_v value based on type of vegetative cover.

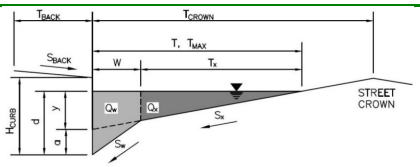
APPENDIX C – HYDRAULIC CALCULATIONS

ALLOWABLE CAPACITY FOR ONE-HALF OF STREET (Minor & Major Storm)

(Based on Regulated Criteria for Maximum Allowable Flow Depth and Spread)

Project: **PEACEFUL RIDGE**
Inlet ID: **DP3**



Gutter Geometry:			
Maximum Allowable Width for Spread Behind Curb	T_{BACK} =	7.5	ft
Side Slope Behind Curb (leave blank for no conveyance credit behind curb)	S_{BACK} =	0.020	ft/ft
Manning's Roughness Behind Curb (typically between 0.012 and 0.020)	n_{BACK} =	0.020	
Height of Curb at Gutter Flow Line	H_{CURB} =	6.00	inches
Distance from Curb Face to Street Crown	T_{CROWN} =	17.0	ft
Gutter Width	W =	2.00	ft
Street Transverse Slope	S_X =	0.020	ft/ft
Gutter Cross Slope (typically 2 inches over 24 inches or 0.083 ft/ft)	S_W =	0.083	ft/ft
Street Longitudinal Slope - Enter 0 for sump condition	S_O =	0.040	ft/ft
Manning's Roughness for Street Section (typically between 0.012 and 0.020)	n_{STREET} =	0.016	

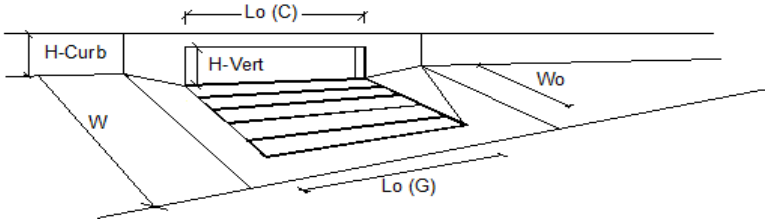
		Minor Storm	Major Storm	
Max. Allowable Spread for Minor & Major Storm	T_{MAX} =	17.0	17.0	ft
Max. Allowable Depth at Gutter Flowline for Minor & Major Storm	d_{MAX} =	5.6	7.2	inches
Allow Flow Depth at Street Crown (check box for yes, leave blank for no)		☐	☑	

		Minor Storm	Major Storm	
MINOR STORM Allowable Capacity is based on Depth Criterion				
MAJOR STORM Allowable Capacity is based on Depth Criterion	**Q_{allow} =**	**16.3**	**23.2**	**cfs**

Minor storm max. allowable capacity GOOD - greater than the design peak flow of 5.00 cfs on sheet 'Inlet Management'
Major storm max. allowable capacity GOOD - greater than the design peak flow of 10.00 cfs on sheet 'Inlet Management'

INLET ON A CONTINUOUS GRADE

MHFD-Inlet, Version 5.02 (August 2022)



Design Information (Input) — CDOT Type R Curb Opening		MINOR	MAJOR	
Type of Inlet	Type =	CDOT Type R Curb Opening		
Local Depression (additional to continuous gutter depression 'a')	a_{LOCAL} =	3.0	3.0	inches
Total Number of Units in the Inlet (Grate or Curb Opening)	No =	4	4	
Length of a Single Unit Inlet (Grate or Curb Opening)	L_o =	5.00	5.00	ft
Width of a Unit Grate (cannot be greater than W, Gutter Width)	W_o =	N/A	N/A	ft
Clogging Factor for a Single Unit Grate (typical min. value = 0.5)	C_f (G) =	N/A	N/A	
Clogging Factor for a Single Unit Curb Opening (typical min. value = 0.1)	C_f (C) =	0.10	0.10	

Street Hydraulics: OK - Q < Allowable Street Capacity'		MINOR	MAJOR	
Total Inlet Interception Capacity	**Q =**	**5.0**	**10.0**	**cfs**
Total Inlet Carry-Over Flow (flow bypassing inlet)	**Q_b =**	**0.0**	**0.0**	**cfs**
Capture Percentage = Q_a/Q_o	**C% =**	**100**	**100**	**%**

Riprap Sizing - Spillway				
q (cfs/ft)	S (ft/ft)	C_f	n	D_{50} min. (in)
1.94	0.33	2	0	8.20

Type L Riprap (D_{50} = 9") will be utilized for the spillway protection

Riprap Sizing - DP18 Overflow				
q (cfs/ft)	S (ft/ft)	C_f	n	D_{50} min. (in)
1.35	0.25	2	0	5.94

Type VL Riprap (D_{50} = 6") will be utilized for the overflow protection

Riprap Sizing - Peaceful Ridge Rundown (Basin D6)				
q (cfs/ft)	S (ft/ft)	C_f	n	D_{50} min. (in)
0.10	0.25	2	0	1.38

Type VL Riprap (D_{50} = 6") will be utilized for the rundown protection

Riprap Sizing - Peaceful Ridge Rundown (Basin 7)				
	S (ft/ft)	C_f	n	D_{50} min. (in)
0.22	0.25	2	0	2.13

Type VL Riprap (D_{50} = 6") will be utilized for the rundown protection

Riprap Sizing - Pond Outfall (DP22)							
Pipe Dia (ft)	q (cfs/ft)	S (ft/ft)	C_f	n	D_{50} min. (in)	Length (ft, = 3x Pipe Dia)	Width (ft, = 3x Pipe Dia)
4	29.00	0.02	2	0	11.18	12	12

Type M Riprap (D_{50} = 12") will be utilized for the outfall protection

$$D_{50} = 5.23\, S^{0.43}\, (1.35 C_f q)^{0.56}$$ Equation 13-9

Where:

- D_{50} = median rock size (in)
- S = longitudinal slope (ft/ft)
- C_f = concentration factor (1.0 to 3.0)
- q = unit discharge (cfs/ft)

When:

- η (porosity) = 0.0 (i.e., for buried soil riprap)

Forebay #1 Sizing	
Tributary Area (ac) =	53.55
Site % Impervious=	41.70
Total Impervious Acres =	22.33
WQCV (ac-ft) =	0.82
WQCV (ft^3)=	35,849.88
3% of WQCV =	**1,075.50**

It appears this flow is only accounting for this subdivision's contribution to the channel. Revise to include Cottonwood Meadows' flows that drainage to this channel.

Revised. Off-ste area from Cottonwood Meadows has been added to a new proposed swale on the Peaceful Ridge site.

DETENTION BASIN STAGE-STORAGE TABLE BUILDER

MHFD-Detention, Version 4.06 (July 2022)

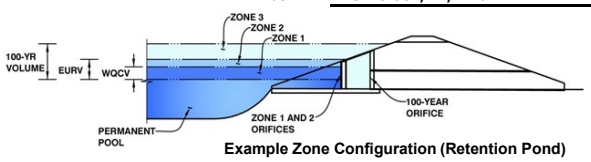
Unresolved from review 1. It does not appear that this sheet has been updated to match what was approved. Discuss in a narrative what changes are being proposed and why. It appears a smaller pond would be needed with these calculations.

The outlet structure and outfall piping has not yet been built yet on the existing pond. The outlet structure and proposed piping for the CD set will be installed in lieu of the structures shown on the EGP.

Project: PEACEFUL RIDGE FINAL DRAINAGE REPORT

Basin ID: BASINS OS1, A1, A2 & B1-B11



Example Zone Configuration (Retention Pond)

	Estimated Stage (ft)	Estimated Volume (ac-ft)	Outlet Type
Zone 1 (WQCV)	2.52	0.803	Orifice Plate
Zone 2 (EURV)	4.21	1.494	Circular Orifice
Zone 3 (100-year)	6.23	2.006	Weir&Pipe (Rest
Total (all zones)		4.303	

User Input: Orifice at Underdrain Outlet (typically used to drain WQCV in a Filtration BMP)

Underdrain Orifice Invert Depth =	N/A	ft (distance below the filtration media surface)	Underdrain Orifice Area =	N/A	ft^2
Underdrain Orifice Diameter =	N/A	inches	Underdrain Orifice Centroid =	N/A	feet

User Input: Orifice Plate with one or more orifices or Elliptical Slot Weir (typically used to drain WQCV and/or EURV in a sedimentation BMP)

Calculated Parameters for Plate

Centroid of Lowest Orifice =	0.00	ft (relative to basin bottom at Stage = 0 ft)	WQ Orifice Area per Row =	2.063E-02	ft^2
Depth at top of Zone using Orifice Plate =	2.53	ft (relative to basin bottom at Stage = 0 ft)	Elliptical Half-Width =	N/A	feet
Orifice Plate: Orifice Vertical Spacing =	10.10	inches	Elliptical Slot Centroid =	N/A	feet
Orifice Plate: Orifice Area per Row =	2.97	sq. inches (diameter = 1-15/16 inches)	Elliptical Slot Area =	N/A	ft^2

User Input: Stage and Total Area of Each Orifice Row (numbered from lowest to highest)

	Row 1 (required)	Row 2 (optional)	Row 3 (optional)	Row 4 (optional)	Row 5 (optional)	Row 6 (optional)	Row 7 (optional)	Row 8 (optional)
Stage of Orifice Centroid (ft)	0.00	0.84	1.69					
Orifice Area (sq. inches)	2.97	2.97	2.97					

	Row 9 (optional)	Row 10 (optional)	Row 11 (optional)	Row 12 (optional)	Row 13 (optional)	Row 14 (optional)	Row 15 (optional)	Row 16 (optional)
Stage of Orifice Centroid (ft)								
Orifice Area (sq. inches)								

User Input: Vertical Orifice (Circular or Rectangular)

Calculated Parameters for Vertical Orifice

	Zone 2 Circular	Not Selected			Zone 2 Circular	Not Selected	
Invert of Vertical Orifice =	2.53	N/A	ft (relative to basin bottom at Stage = 0 ft)	Vertical Orifice Area =	0.02	N/A	ft^2
Depth at top of Zone using Vertical Orifice =	4.25	N/A	ft (relative to basin bottom at Stage = 0 ft)	Vertical Orifice Centroid =	0.08	N/A	feet
Vertical Orifice Diameter =	1.83	N/A	inches				

User Input: Overflow Weir (Dropbox with Flat or Sloped Grate and Outlet Pipe OR Rectangular/Trapezoidal Weir and No Outlet Pipe)

Calculated Parameters for Overflow Weir

	Zone 3 Weir	Not Selected			Zone 3 Weir	Not Selected	
Overflow Weir Front Edge Height, Ho =	4.25	N/A	ft (relative to basin bottom at Stage = 0 ft)	Height of Grate Upper Edge, H_t =	5.08	N/A	feet
Overflow Weir Front Edge Length =	10.00	N/A	feet	Overflow Weir Slope Length =	10.03	N/A	feet
Overflow Weir Grate Slope =	12.00	N/A	H:V	Grate Open Area / 100-yr Orifice Area =	7.48	N/A	
Horiz. Length of Weir Sides =	10.00	N/A	feet	Overflow Grate Open Area w/o Debris =	69.84	N/A	ft^2
Overflow Grate Type =	Type C Grate	N/A		Overflow Grate Open Area w/ Debris =	69.84	N/A	ft^2
Debris Clogging % =	0%	N/A	%				

assume 50% REVISED

User Input: Outlet Pipe w/ Flow Restriction Plate (Circular Orifice, Restrictor Plate, or Rectangular Orifice)

Calculated Parameters for Outlet Pipe w/ Flow Restriction Plate

	Zone 3 Restrictor	Not Selected			Zone 3 Restrictor	Not Selected	
Depth to Invert of Outlet Pipe =	2.50	N/A	ft (distance below basin bottom at Stage = 0 ft)	Outlet Orifice Area =	9.33	N/A	ft^2
Outlet Pipe Diameter =	48.00	N/A	inches	Outlet Orifice Centroid =	1.55	N/A	feet
Restrictor Plate Height Above Pipe Invert =	33.40		inches	Half-Central Angle of Restrictor Plate on Pipe =	1.97	N/A	radians

User Input: Emergency Spillway (Rectangular or Trapezoidal)

Calculated Parameters for Spillway

Spillway Invert Stage=	5.75	ft (relative to basin bottom at Stage = 0 ft)	Spillway Design Flow Depth=	0.73	feet
Spillway Crest Length =	100.00	feet	Stage at Top of Freeboard =	7.48	feet
Spillway End Slopes =	4.00	H:V	Basin Area at Top of Freeboard =	1.11	acres
Freeboard above Max Water Surface =	1.00	feet	Basin Volume at Top of Freeboard =	5.66	acre-ft

Routed Hydrograph Results

The user can override the default CUHP hydrographs and runoff volumes by entering new values in the Inflow Hydrographs table (Columns W through AF).

Design Storm Return Period =	WQCV	EURV	2 Year	5 Year	10 Year	25 Year	50 Year	100 Year	500 Year

DETENTION BASIN OUTLET STRUCTURE DESIGN

MHFD-Detention, Version 4.06 (July 2022)

Summary Stage-Area-Volume-Discharge Relationships

The user can create a summary S-A-V-D by entering the desired stage increments and the remainder of the table will populate automatically.

The user should graphically compare the summary S-A-V-D table to the full S-A-V-D table in the chart to confirm it captures all key transition points.

Stage - Storage Description	Stage [ft]	Area [ft ^{2}]	Area [acres]	Volume [ft ^{3}]	Volume [ac-ft]	Total Outflow [cfs]

For best results, include the stages of all grade slope changes (e.g. ISV and Floor) from the S-A-V table on Sheet 'Basin'.

Also include the inverts of all outlets (e.g. vertical orifice, overflow grate, and spillway, where applicable).

APPENDIX E – REFERENCE MATERIAL
