¹ A "Non-Jurisdictional Structure" is a dam creating a reservoir with a capacity of 100 acre-feet or less and a surface area of 20 acres or less and a vertical height (footnote 2) of 10 feet or less. Non-jurisdictional size dams are regulated and subject to the authority of the State Engineer consistent with sections 37-87-102 and 37-87-105 C.R.S.
² "Vertical Height" is measured from the elevation of the lowest point of the natural surface of the ground or the invert of the outlet conduit (whichever is lower) where that point occurs along the longitudinal centerline of the dam up to the crest of the emergency spillway of the dam.
³ "Freeboard" is the vertical distance from the bottom of spillway to the crest of the dam. Minimum Freeboard is 3 feet.
⁴ If construction in reservoir intercepts groundwater, a well permit is required. (Well permit applications can be found at dwr.colorado.gov)
⁵ As determined by a professional engineer licensed in the State of Colorado. Potential hazard classes: High, Significant, Low, and No Public Hazard. Refer to [2-CCR 402-1 §4.2.14](#) for definitions and Colorado Dam Safety [Guidelines for Hazard Classification](#) and [Guidelines for Dam Breach Analysis](#) for additional information.
⁶ 37-87-114.5 C.R.S. and [2-CCR 402-1 §17](#) provide exemptions for some types of structures.
