RE: The Campus at Foothills Farm
Colorado Springs, CO
Traffic Technical Memorandum
LSC #184690

Dear Cody:

In response to your request, LSC Transportation Consultants, Inc. has prepared this Traffic Technical Memorandum for the proposed amendment to The Farm Master Plan. The area of amendment is located northwest of the intersection of New Life Drive and Federal Drive in Colorado Springs, Colorado. This report contains the following:

- The existing and future land uses within the study area.
- The projected additional average weekday and peak-hour vehicle trips to be generated by the future development within the study area.
- The assignment of the projected trips to the existing and planned street system.
- The resulting buildout traffic volumes on the street system.
- The resulting traffic impacts. The traffic impacts have been quantified by determining the future levels of service and projected vehicle queues at the key intersections along Federal Drive north of New Life Drive.
- Potential intersection improvements at key intersections to mitigate the projected traffic impacts.

EXISTING AND FUTURE LAND USE

The area north of Interquest Parkway and south of the wetlands area between Interstate 25 and Voyager Parkway was divided into 22 traffic analysis zones (TAZs). Figure 1 shows the location of each TAZ. Table 1 shows the existing and future land uses assumed for each TAZ. TAZs 1 through 11 include all the area included in the Interquest Marketplace. TAZs 12 and 13 include the existing and approved Foothill Farms residential land uses located northeast of the intersection of Federal Drive and New Life Drive. TAZs 14 through 22 include the currently proposed areas of amendment to The Farm Master Plan. This amendment area is located south of Black Squirrel Creek. As shown on the approved master plan, an annexation agreement restricts the commercial and employment use for this area to 1,100,000 square feet. The amendment requests that the property owners hereby

consent to the removal of the maximum square footage cap for commercial and employment uses per the Allison Ranch Addition Annexation Agreement. This area is planned to be developed with a mix of offices, hotels, restaurants, a gym, and multi-family residential uses.

TRIP GENERATION

Estimates of the traffic volumes expected to be generated by the assumed future land uses within the area north of Interquest Parkway and south of the wetlands area between Interstate 25 and Voyager Parkway were made using the nationally published trip generation rates found in *Trip Generation, 10th Edition, 2017* by the Institute of Transportation Engineers (ITE). Table 1 shows the trip generation estimates.

INTERSECTION TRAFFIC PROJECTIONS

A traffic analysis model has been developed and utilized to estimate the projected traffic volumes within the study area. The estimated trips to be generated by each TAZ shown in Table 1 have been distributed based on the distribution percentages shown in Figure 2. The trips were then assigned to the area street network using the model. Trips have been assigned based on both the distribution shown on the exhibit and a set of trip assignment path assumptions for each TAZ.

Figure 3 shows the projected buildout traffic volumes at the key intersections in the study area during both the morning and afternoon peak hours.

LEVEL OF SERVICE

The key area intersections have been analyzed to determine the projected levels of service for the buildout traffic volumes based on the signalized method of analysis from Synchro and the unsignalized method of analysis procedures outlined in the *Highway Capacity Manual, 6th Edition* by the Transportation Research Board. The results of the analysis are shown in Figure 4.

Federal/New Life

It was assumed that the intersection of Federal/New Life would be converted to signal control prior to buildout of the study area. As a signalized intersection all movements are projected to operate at LOS D or better during peak hours.

Federal Drive Access Points North of New Life Drive

All of the proposed access points to Federal Drive north of New Life Drive are projected to operate at a satisfactory level of service as stop-sign-controlled intersections based on the projected buildout peak-hour traffic volumes shown in Figure 3 and the recommended lane geometry shown in Figure 4.

Federal Drive/Rampart Hills View/Ent Parkway

The intersection of Federal Drive/Rampart is planned to be reconstructed to add a north leg (Ent Parkway). The intersection is currently designed as a one-lane roundabout; however, it could be restriped to provide two circulating lanes. The southbound approach of this leg should be designed to provide a two-lane approach. The westbound approach (Federal Drive) should also be restriped for a two-lane approach. Based on the lane geometry shown in Figure 4 all approaches are projected to operate at LOS B or better during the peak hours.

RECOMMENDED IMPROVEMENTS FOR FEDERAL/SUMMIT VIEW

LSC, Classic Consulting, and the owner considered and evaluated several alternatives for the intersection of Federal Drive/Summit View Parkway. A preferred alternative was selected and Figure 5 shows the associated recommended improvements to Federal Drive in the vicinity of the future intersection of Summit View Parkway. There are existing curb cuts on both sides of Federal Drive at this location. LSC recommends this section of Federal Drive be redesigned so that this intersection is a "T" intersection with access on the north side of Federal Drive only. The development access on the south would be relocated east to align with the access to the office development on the north side of Federal. The existing north curb west of the intersection should be moved south to shorten the required crossing distance for pedestrians. This will require the second westbound through lane on Federal Drive to become the right-turn lane approaching Summit View Parkway.

It will be necessary to provide good signage/markings in the median on the west leg. The following signs could be used:

West Leg: A pedestrian crossing sign with a directional sign as shown below placed in the median.

:color may be used for this sign or plaque

East Leg: A directional sign as shown below placed on the right-side of the road

OM3-R

Please contact me if you have any questions regarding this report.
