## **1.0 EXECUTIVE SUMMARY**

---

Skyview Village is a proposed 74-home single-family residential neighborhood project to be located on the northwest corner of the Hancock Expressway and Powers Boulevard (SH-21) intersection in Colorado Springs, Colorado. The project is expected to be completed within the next couple years. Therefore, analysis was conducted for the 2023 short term horizon as well as the 2040 long term horizon.

The purpose of this study is to identify project traffic generation characteristics, to identify potential project traffic related impacts on the local street system, and to develop mitigation measures required for identified impacts. The following intersections were incorporated into this traffic study in accordance with the City of Colorado Springs standards and requirements:

- Hancock Expressway and Powers Boulevard (SH-21)
- Hancock Expressway and Silver Hawk Avenue
- Painted Sky View and Silver Hawk Avenue

Regional access will be provided by Interstate 25 (I-25), US Highway 24, Powers Boulevard (SH-21), and Milton E Proby Parkway. Primary access will be provided by Hancock Expressway. Direct access to the residential development will be provided from a proposed new east leg at the Painted Sky View and Silver Hawk Avenue intersection.

Skyview Village with 74 dwelling units is expected to generate approximately 788 weekday daily vehicle trips with 57 of these trips occurring during the morning peak hour and 76 trips occurring during the afternoon peak hour.

Distribution of project traffic on the street system was based on the area street system characteristics, existing traffic patterns, existing and anticipated surrounding development areas, and the proposed access system for the project. The directional distribution of traffic is a means to quantify the percentage of site-generated traffic that approaches the site from a given direction and departs the site back to the original source.

Based on the analysis presented in this report, Kimley-Horn believes the proposed Skyview Village project will be successfully incorporated into the existing and future roadway network.

The existing traffic volume analysis, proposed project development, and expected future traffic volumes resulted in the following conclusions and recommendations:

- The threshold for requiring an access permit along CDOT roadways occurs when project traffic is anticipated to increase the existing access traffic volumes by more than 20 percent. Based on traffic projections, the addition of project traffic on the west leg of Hancock Expressway at Powers Boulevard (SH-21) is not anticipated to increase existing access traffic volumes by more than 20 percent, with the expected increase of approximately 1 percent in both peak hours (41/3,936 AM Peak and 43/2,945 PM Peak). Therefore, a CDOT access permit is not anticipated to be required in association with this project.
- With completion of the Skyview Village development, a new east leg of the intersection of Painted Sky View and Silver Hawk Avenue will be constructed. It is recommended that the westbound approach out of Skyview Village operate with stop-control with the installation of a R1-1 “STOP” sign.
- Any on-site and off-site signing and striping improvements should be incorporated into the Civil Drawings and conform to the City of Colorado Springs standards as well as the Manual on Uniform Traffic Control Devices – 2009 Edition (MUTCD).

## 2.0 INTRODUCTION

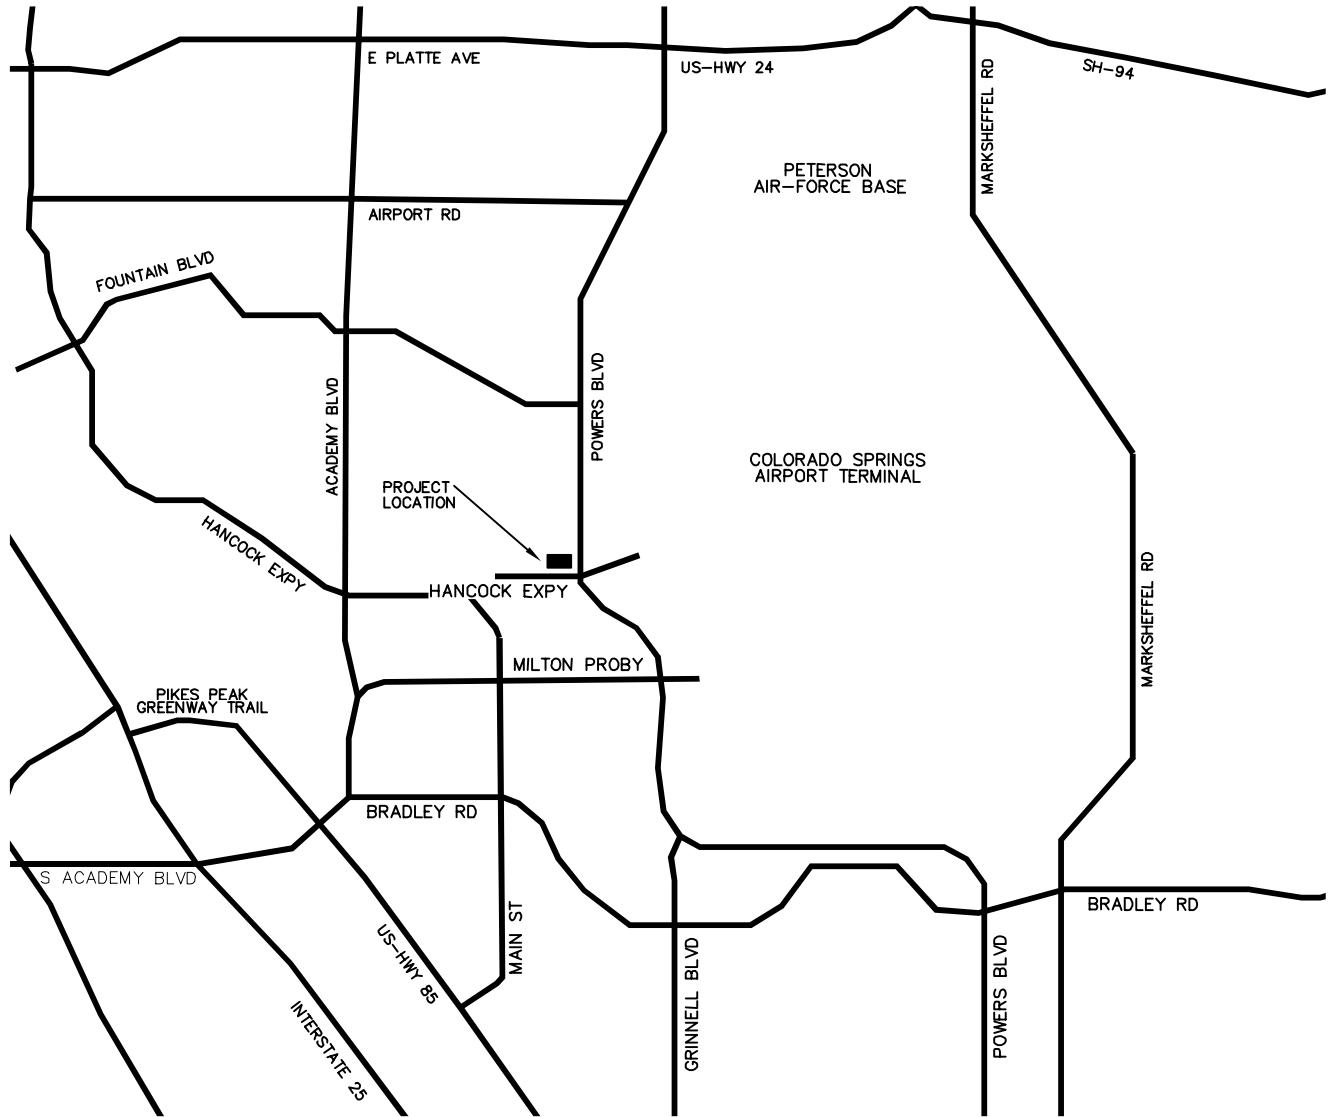

---

Kimley-Horn has prepared this Traffic Impact Study to document the analysis results of future traffic conditions associated with Skyview Village, a 74-home single-family residential neighborhood project proposed to be located on the northwest corner of the Hancock Expressway and Powers Boulevard (SH-21) intersection in Colorado Springs, Colorado. A vicinity map illustrating the project location is shown in **Figure 1**. The project is expected to be completed within the next couple years. Therefore, analysis was conducted for the 2023 short term horizon as well as the 2040 long term horizon. A conceptual site plan illustrating the development and access is shown in **Appendix F**.

The purpose of this study is to identify project traffic generation characteristics, to identify potential project traffic related impacts on the local street system, and to develop mitigation measures required for identified impacts. The following intersections were incorporated into this traffic study in accordance with the City of Colorado Springs standards and requirements:

- Hancock Expressway and Powers Boulevard (SH-21)
- Hancock Expressway and Silver Hawk Avenue
- Painted Sky View and Silver Hawk Avenue

Regional access will be provided by Interstate 25 (I-25), US Highway 24, Powers Boulevard (SH-21), and Milton E Proby Parkway. Primary access will be provided by Hancock Expressway. Direct access to the residential development will be provided from a proposed new east leg at the Painted Sky View and Silver Hawk Avenue intersection.

FIGURE 1

## **3.0 EXISTING CONDITIONS**

---

### **3.1 Existing Study Area**

The project site is currently vacant land. The surrounding area contains residential uses to the north, south, and west of the site. The Colorado Springs Airport is located further to the east of the site, east of Powers Boulevard (SH-21). The area and roadway network surrounding the project site are shown in the aerial of **Figure 2**.

### **3.2 Existing Roadway Network**

Powers Boulevard (SH-21) is a four-lane divided roadway providing two through lanes of travel, northbound and southbound, with a posted speed limit of 55 miles per hour through the study area. Hancock Expressway is a four-lane divided roadway providing two through lanes of travel, eastbound and westbound, with a posted speed limit of 35 miles per hour. Hancock Expressway converts to Zepplin Road and provides one through lane in each direction, east of Powers Boulevard (SH-21). Silver Hawk Avenue is a local roadway providing one through lane in each direction, northbound and southbound, with a posted speed limit of 30 miles per hour.

The intersection of Hancock Expressway and Powers Boulevard (SH-21) is signalized with protected-permitted left turn phasing on the northbound and southbound approaches and permissive only left turn phasing eastbound and westbound. The eastbound, westbound, and southbound right turns operate under free conditions. The northbound, southbound, and eastbound approaches consist of a left turn lane, two through lanes, and a right turn lane. The westbound approach consists of a left turn lane, a through lane, and a right turn lane.

The intersection of Hancock Expressway and Silver Hawk Avenue operates as an unsignalized intersection with stop-control on the northbound and southbound approaches of Silver Hawk Avenue. The eastbound and westbound approaches consist of a left turn lane, two through lanes, and a right turn lane. The northbound approach consists of one lane with shared movements while the southbound approach consists of a southbound left turn and a shared through/right turn lane.

SKYVIEW VILLAGE  
COLORADO SPRINGS, COLORADO  
SITE AREA

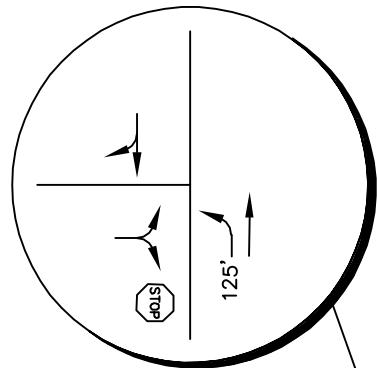

FIGURE 2

The T-intersection of Painted Sky View and Silver Hawk Avenue operates as an unsignalized intersection with stop-control on the eastbound approach of Painted Sky View. The northbound approach consists of a left turn lane and a through lane while the southbound approach consists of a shared through/right turn lane. The eastbound approach consists of a shared left turn/right turn lane. **Figure 3** shows the lane configuration and control for the study area key intersection.

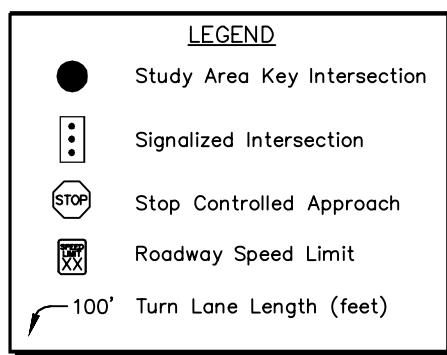

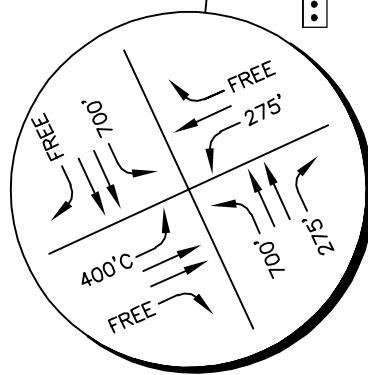

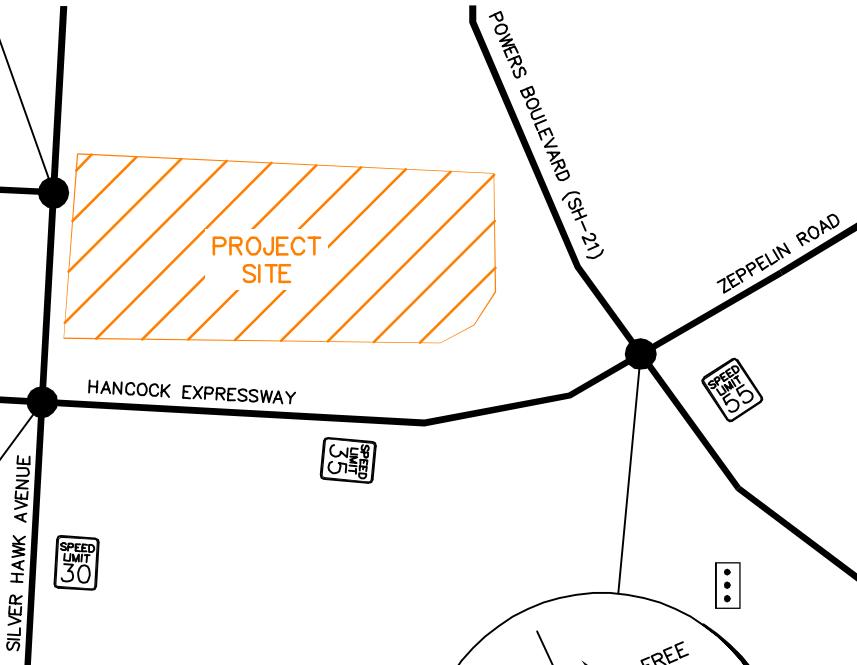

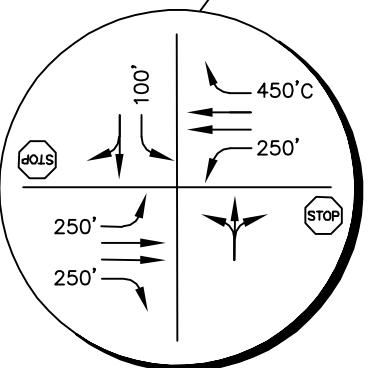

### **3.3 Existing Traffic Volumes**

Existing peak hour turning movement counts were conducted at the Hancock Expressway/Powers Boulevard (SH-21) and Hancock Expressway/Silver Hawk Avenue intersections on Wednesday, January 13, 2021 and at the Painted Sky View/Silver Hawk Avenue intersection on or Tuesday, January 19, 2021. The counts were conducted in 15-minute intervals during the morning and afternoon peak hours of adjacent street traffic from 7:00 AM to 9:00 AM and 4:00 PM to 6:00 PM on these count dates. Existing turning movement counts are shown in **Figure 4** with count sheets provided in **Appendix A**.

Due to the present COVID-19 pandemic, these counts were adjusted based off a comparison of peak hour northbound-southbound through volumes along Powers Boulevard (SH-21) between Hancock Expressway and Milton Proby Parkway. Pre-COVID volumes were collected in November 2019 as part of the *Innovation Peak Park Traffic Impact Study* prepared by Kimley-Horn and Associates. The through volumes along Powers Boulevard (SH-21) were adjusted to 2021 volumes and compared to the existing counts collected in January 2021. It was determined that the existing 2021 traffic volumes needed to be increased by approximately 23 percent during the morning peak hour and 17 percent during the afternoon to identify the normal condition traffic volumes to account for COVID-19. Therefore, a 1.23 factor was applied to the 2021 morning peak hour counts and a 1.17 factor was applied to the 2021 afternoon peak hour counts. Existing adjusted turning movement counts are shown in **Figure 5** with the comparison counts and the count adjustment calculations also provided in **Appendix A**.

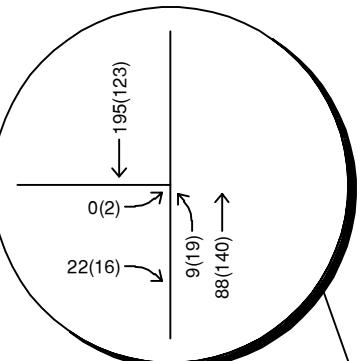

FIGURE 3

### **3.4 Unspecified Development Traffic Growth**

Based on information provided on the website for the Colorado Department of Transportation, the 20-year growth factor along SH-21 (Powers Boulevard) adjacent to the study area is 1.15. This value equates to an annual growth rate ranging from approximately 0.70 percent per year. Traffic information from the CDOT Online Transportation Information System (OTIS), is included in **Appendix B**. Based on this as well as experience with City of Colorado Springs a one (1) percent annual growth rate was used to estimate future background traffic volume conditions within the study area. These background traffic volumes at the study area key intersections are shown in **Figure 6** for the buildout 2023 horizon and in **Figure 7** for the twenty-year long-term horizon of 2040.

## 4.0 PROJECT TRAFFIC CHARACTERISTICS

---

### 4.1 Trip Generation

Site-generated traffic estimates are determined through a process known as trip generation. Rates and equations are applied to the proposed land use to estimate traffic generated by the development during a specific time interval. The acknowledged source for trip generation rates is the *Trip Generation Manual*<sup>1</sup> published by the Institute of Transportation Engineers (ITE). ITE has established trip rates in nationwide studies of similar land uses. For this study, Kimley-Horn used the ITE Trip Generation Report fitted curve equations that apply Single-Family Detached Housing (ITE Code 210) for traffic associated with the development.

Skyview Village with 74 dwelling units is expected to generate approximately 788 weekday daily vehicle trips with 57 of these trips occurring during the morning peak hour and 76 trips occurring during the afternoon peak hour. Calculations were based on the procedure and information provided in the ITE *Trip Generation Handbook, 3<sup>rd</sup> Edition*, 2017. **Table 1** summarizes the estimated trip generation for the proposed development. The trip generation worksheet is included in **Appendix C**.

**Table 1 – Skyview Village Project Traffic Generation**

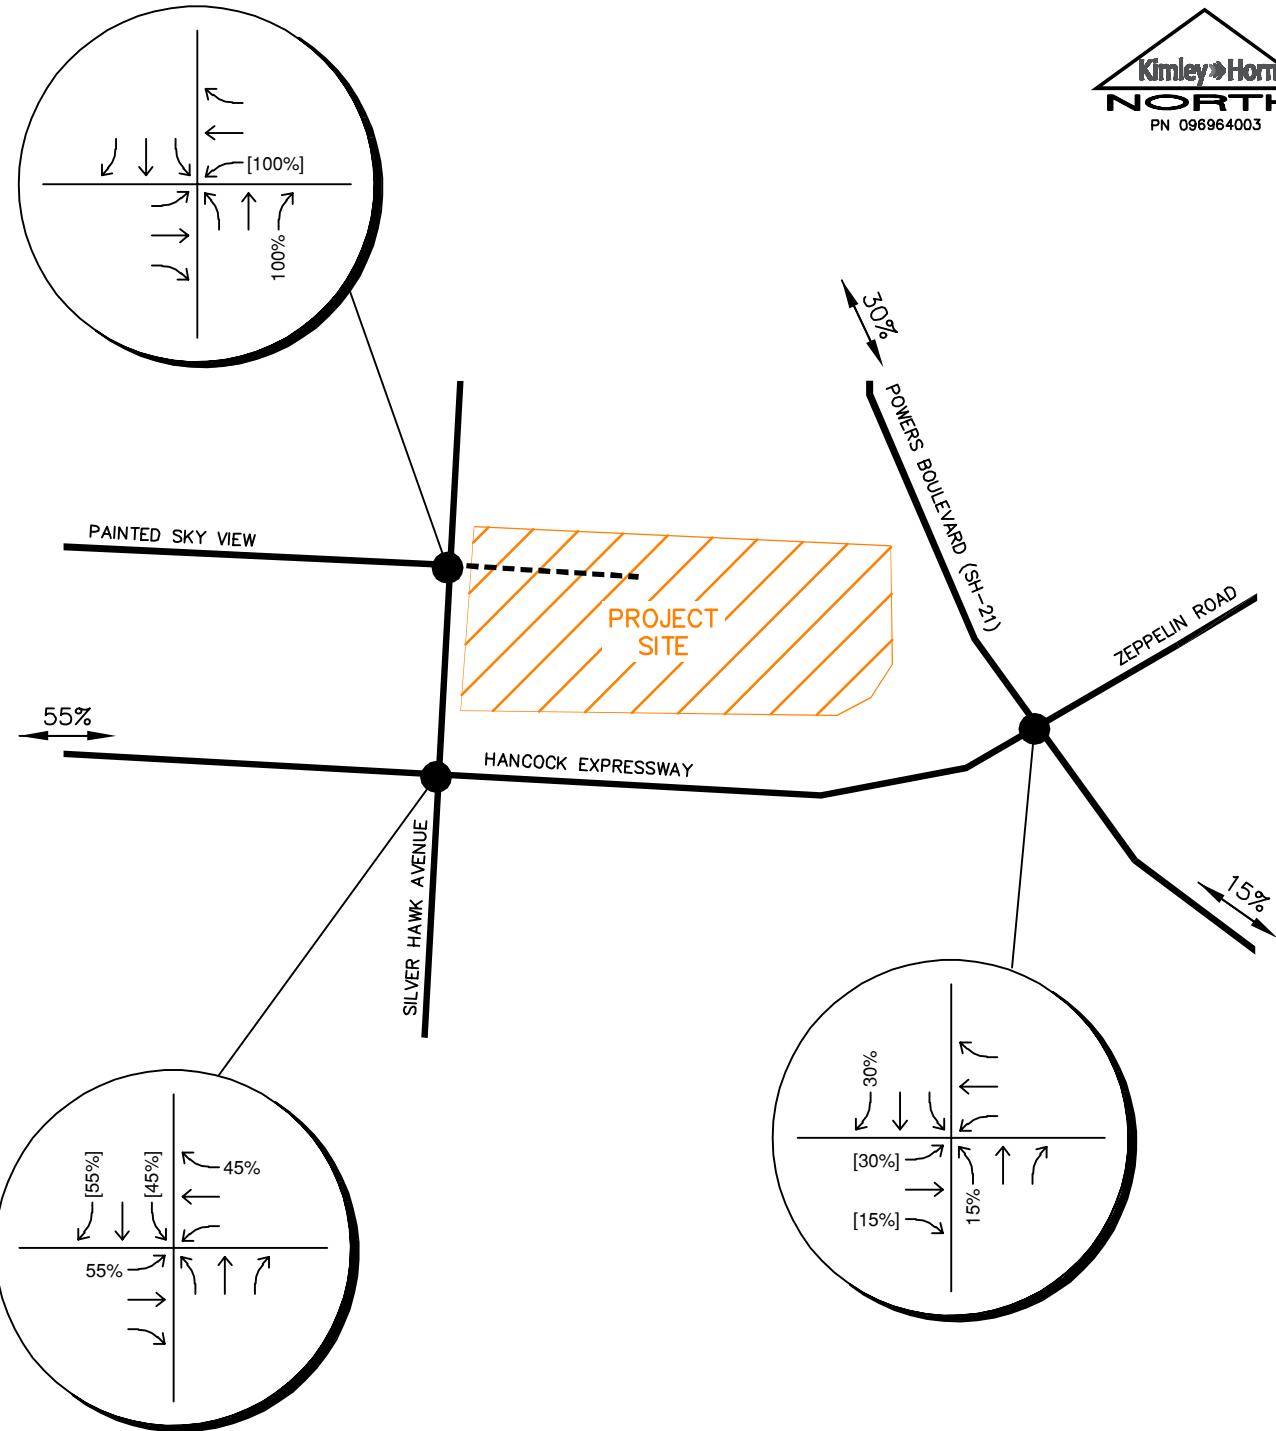

Land Use and Quantity	Daily	Weekday Vehicle Trips					
		AM Peak Hour			PM Peak Hour		
		In	Out	Total	In	Out	Total
Single-Family Detached Housing (ITE 210) – 74 Dwelling Units	788	14	43	57	48	28	76

### 4.2 Trip Distribution

Distribution of project traffic on the street system was based on the area street system characteristics, existing traffic patterns, existing and anticipated surrounding development areas, and the proposed access system for the project. The directional distribution of traffic is a means to quantify the percentage of site-generated traffic that approaches the site from a given direction and departs the site back to the original source. The project trip distribution is illustrated in **Figure 8**.

#### **4.3 Traffic Assignment**

Traffic assignment was obtained by applying the project trip distribution to the estimated traffic generation of the project shown in **Table 1**. Project traffic assignment is shown in **Figure 9**.

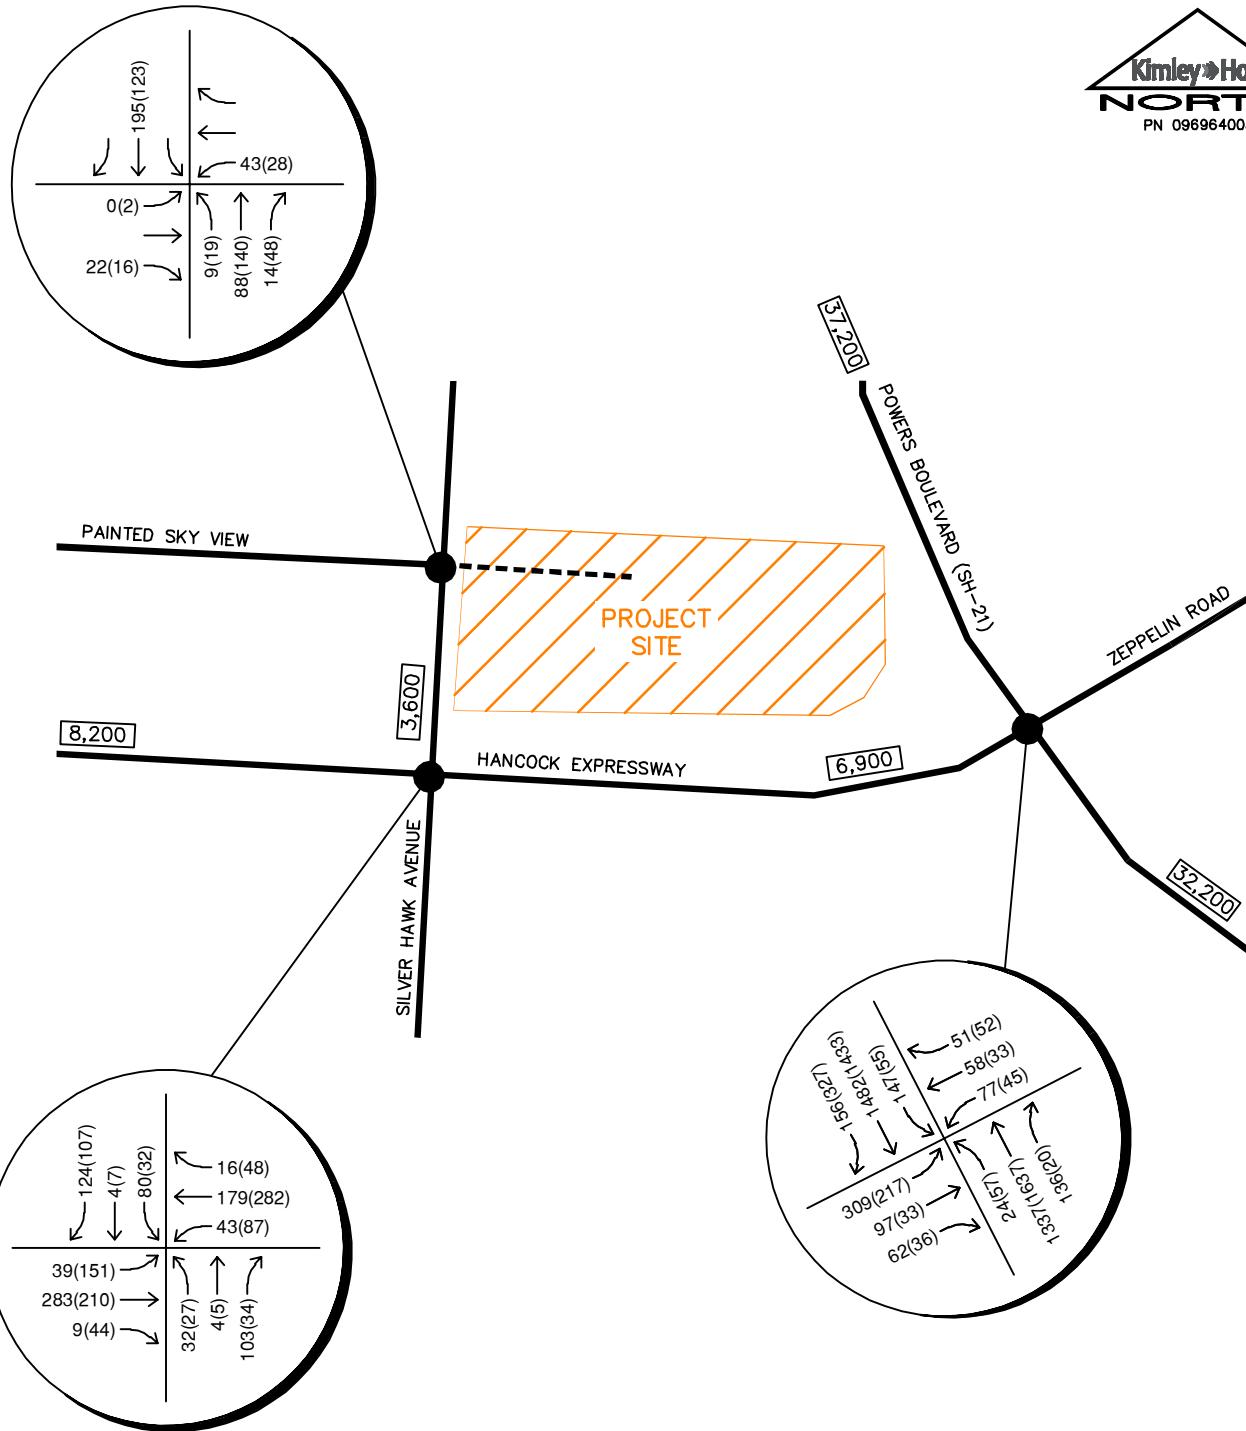

#### **4.4 Total (Background Plus Project) Traffic**

Project traffic volumes were added to the background volumes to represent estimated traffic conditions for the short term 2023 horizon and long term 2040 horizon. These total traffic volumes for the site are illustrated for the 2023 and 2040 horizon years in **Figures 10** and **11**, respectively.

## 5.0 TRAFFIC OPERATIONS ANALYSIS

---

Kimley-Horn's analysis of traffic operations in the site vicinity was conducted to determine potential capacity deficiencies in the 2023 and 2040 development horizons at the identified key intersections and access driveways. The acknowledged source for determining overall capacity is the current edition of the *Highway Capacity Manual (HCM)*<sup>2</sup>.

### 5.1 Analysis Methodology

Capacity analysis results are listed in terms of Level of Service (LOS). LOS is a qualitative term describing operating conditions a driver will experience while traveling on a particular street or highway during a specific time interval. It ranges from A (very little delay) to F (long delays and congestion). For intersections and roadways in this study area, typical standard traffic engineering procedure recommends overall intersection LOS D and movement/approach LOS E as the minimum threshold for acceptable operations. **Table 2** shows the definition of level of service for signalized and unsignalized intersections.

**Table 2 – Level of Service Definitions**

Level of Service	Signalized Intersection Average Total Delay (sec/veh)	Unsignalized Intersection Average Total Delay (sec/veh)
A	$\leq 10$	$\leq 10$
B	$> 10$ and $\leq 20$	$> 10$ and $\leq 15$
C	$> 20$ and $\leq 35$	$> 15$ and $\leq 25$
D	$> 35$ and $\leq 55$	$> 25$ and $\leq 35$
E	$> 55$ and $\leq 80$	$> 35$ and $\leq 50$
F	$> 80$	$> 50$

Definitions provided from the Highway Capacity Manual, Sixth Edition, Transportation Research Board, 2016.

Study area intersections were analyzed based on average total delay analysis for signalized and unsignalized intersections. Under the unsignalized analysis, the level of service (LOS) for a two-way stop-controlled intersection is determined by the computed or measured control delay and is defined for each minor movement. Level of service for a two-way stop-controlled intersection is not defined for the intersection as a whole. Level of service for a signalized and all-way stop controlled intersection is defined for each approach and for the intersection.

---

<sup>2</sup> Transportation Research Board, *Highway Capacity Manual*, Sixth Edition, Washington DC, 2016.

## 5.2 Key Intersection Operational Analysis

Calculations for the level of service at the key intersections and project access driveways for the study area are provided in **Appendix D**. The existing year analysis is based on the lane geometry and intersection control shown in **Figure 3**. Existing peak hour factors were used for all horizon year scenarios. Existing cycle lengths and timing splits for the key signalized intersections were utilized for all of the study horizons as observed at the time of the counts. Synchro traffic analysis software was used to analyze the study area intersections and access driveways for intersection delay and level of service.

### Hancock Expressway and Powers Boulevard (SH-21)

The signalized intersection of Hancock Expressway and Powers Boulevard (SH-12) operates with protected-permissive left turn phasing on the northbound and southbound approaches and permissive-only left turn phasing on the eastbound and westbound approaches. This intersection currently operates acceptably with a LOS D during the morning peak hour and LOS C during the afternoon peak hour. With the addition of project traffic and the existing lane configurations, this intersection is expected to continue to operate acceptably with LOS D during the morning peak hour and LOS C during the afternoon peak hour, throughout the 2040 horizon.

**Table 3** provides the results of the level of service analysis for this intersection.

**Table 3 – Hancock Expressway & Powers Boulevard LOS Results**

Scenario	AM Peak Hour		PM Peak Hour	
	Delay (sec)	LOS	Delay (sec)	LOS
2021 Existing (Adjusted)	38.6	D	22.8	C
2023 Background	39.4	D	23.8	C
2023 Background Plus Project	41.1	D	24.5	C
2040 Background	43.7	D	29.2	C
2040 Background Plus Project	46.5	D	30.1	C

### Hancock Expressway and Silver Hawk Avenue

The unsignalized intersection of Hancock Expressway and Silver Hawk Avenue operates with stop control on the northbound and southbound approaches of Silver Hawk Avenue. The movements at this intersection currently operate acceptably with LOS C or better during the morning and afternoon peak hours. With the addition of project traffic and existing lane configurations, the movements at this intersection are expected to continue to operate acceptably with LOS C or better during the peak hours and LOS D or better during the peak hours throughout the 2040 horizon. **Table 4** provides the results of the level of service analysis for this intersection.

**Table 4 – Hancock Expressway & Silver Hawk Avenue LOS Results**

Southbound Through/Right	10.1	B	11.9	B

### Painted Sky View and Silver Hawk Avenue

The unsignalized T-intersection of Painted Sky View and Silver Hawk Avenue operates with stop control for the eastbound approach. Therefore, with this configuration, all movements at this intersection currently operate acceptably with LOS A or better during the morning and afternoon peak hours. With the addition of project traffic, the east leg will be constructed and operate under stop-control with a R1-1 “STOP” sign installed on the westbound exiting approach from Skyview Village. The movements at this intersection are expected to operate acceptably with LOS B or better during the peak hours throughout the 2040 horizon. **Table 5** provides the results of the level of service analysis for this intersection.

**Table 5 – Painted Sky View & Silver Hawk Avenue LOS Results**

Scenario	AM Peak Hour		PM Peak Hour

### 5.3 Vehicle Queuing Analysis

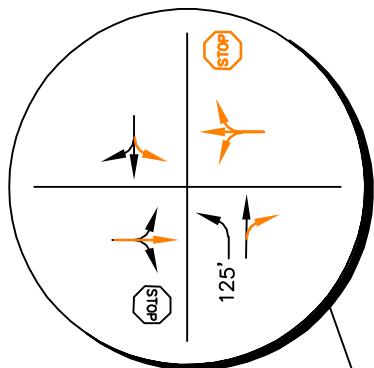

A vehicle queuing analysis was conducted for turn lanes at the study area intersections. The queuing analysis was performed using the Synchro analysis software presenting the results of the 95th percentile queue length. Results of the vehicle queuing analysis are shown in the following **Table 6** with calculations provided in the intersection operational outputs located in **Appendix D** for unsignalized intersections and vehicle queuing analysis worksheets in **Appendix E** for the signalized location.

**Table 6 – Queuing Analysis Results and Recommendations**

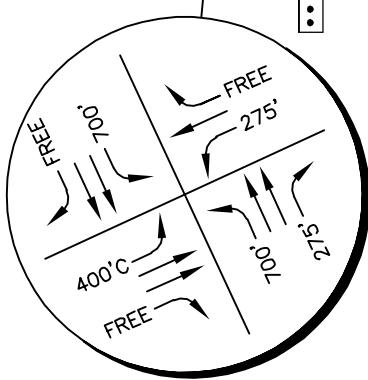

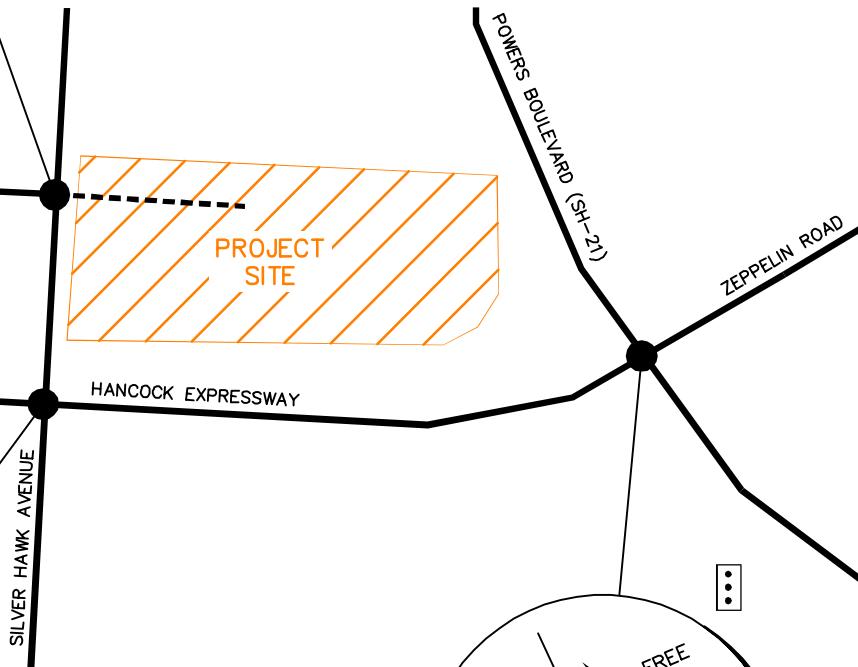

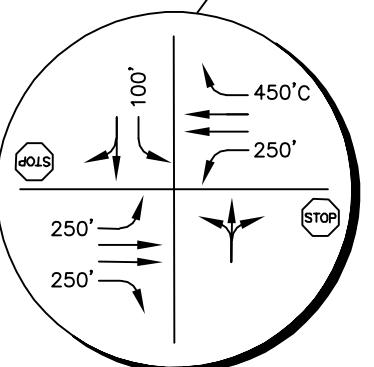

Intersection Turn Lane	Existing Turn Lane Length (feet)	2023 Calculated Queue Length (feet)	2023 Recommended Turn Lane Length (feet)	2040 Calculated Queue Length (feet)	2040 Recommended Turn Lane Length (feet)
<b>Hancock Expy &amp; Powers Blvd</b>					
Eastbound Left	400'/C	477'	400'/C	605'	400'/C
Westbound Left	275'	91'	275'	131'	275'
Northbound Left	700'	34'	700'	62'	700'
Northbound Right	275'	61'	275'	73'	275'
Southbound Left	700'	231'	700'	295'	700'
<b>Hancock Expy &amp; Silver Hawk</b>					
Eastbound Left	250'	25'	250'	25'	250'
Westbound Left	250'	25'	250'	25'	250'
Southbound Left	100'	25'	100'	50'	100'
<b>Painted Sky View &amp; Silver Hawk</b>					
Northbound Left	125'	25'	125'	25'	125'

C = Continuous Lane

As shown in the vehicle queuing table, all vehicle queues are expected to be contained within the existing lane lengths in the short term 2023 horizon and long-term 2040 horizon. Based on the operational level of service and queuing analysis results, the recommended lane configurations and control of the study key intersections are shown in **Figure 12**.

## **6.0 CONCLUSIONS AND RECOMMENDATIONS**

---

Based on the analysis presented in this report, Kimley-Horn believes the proposed Skyview Village project will be successfully incorporated into the existing and future roadway network. The existing traffic volume analysis, proposed project development, and expected future traffic volumes resulted in the following conclusions and recommendations:

- The threshold for requiring an access permit along CDOT roadways occurs when project traffic is anticipated to increase the existing access traffic volumes by more than 20 percent. Based on traffic projections, the addition of project traffic on the west leg of Hancock Expressway at Powers Boulevard (SH-21) is not anticipated to increase existing access traffic volumes by more than 20 percent, with the expected increase of approximately 1 percent in both peak hours (41/3,936 AM Peak and 43/2,945 PM Peak). Therefore, a CDOT access permit is not anticipated to be required in association with this project.
- With completion of the Skyview Village development, a new east leg of the intersection of Painted Sky View and Silver Hawk Avenue will be constructed. It is recommended that the westbound approach out of Skyview Village operate with stop-control with the installation of a R1-1 “STOP” sign.
- Any on-site and off-site signing and striping improvements should be incorporated into the Civil Drawings and conform to the City of Colorado Springs standards as well as the Manual on Uniform Traffic Control Devices – 2009 Edition (MUTCD).

# APPENDIX C

## Trip Generation Calculations

Project Skyview Village  
 Subject Trip Generation for Single-Family Detached Housing  
 Designed by MAG Date February 01, 2021 Job No. 096964003  
 Checked by \_\_\_\_\_ Date \_\_\_\_\_ Sheet No. \_\_\_\_\_ of \_\_\_\_\_

### TRIP GENERATION MANUAL TECHNIQUES

ITE Trip Generation Manual 10th Edition, Fitted Curve Equations

Land Use Code - Single-Family Detached Housing (210)

Independent Variable - Dwelling Units (X)

$$X = 74$$

T = Average Vehicle Trip Ends

### Peak Hour of Adjacent Street Traffic, One Hour Between 7 and 9 a.m. (200 Series Page 3)

Average Weekday (T) = 0.71 (X) + 4.80 (T) = 0.71 * (74) + 4.80	Directional Distribution: 25% ent. 75% exit. T = 57 Average Vehicle Trip Ends 14 entering 43 exiting
	14 + 43 = 57

### Peak Hour of Adjacent Street Traffic, One Hour Between 4 and 6 p.m. (200 Series Page 4)

Average Weekday $\ln(T) = 0.96 \ln(X) + 0.20$ $\ln(T) = 0.96 * \ln(74) + 0.20$	Directional Distribution: 63% ent. 37% exit. T = 76 Average Vehicle Trip Ends 48 entering 28 exiting
	48 + 28 = 76

### Peak Hour of Generator, Saturday (200 Series Page 8)

Average Saturday (T) = 0.84 (X) + 17.99 (T) = 0.84 * (74) + 17.99	Directional Distribution: 54% ent. 46% exit. T = 80 Average Vehicle Trip Ends 43 entering 37 exiting
	43 + 37 = 80

### Weekday (200 Series Page 2)

Average Weekday $\ln(T) = 0.92 \ln(X) + 2.71$ $\ln(T) = 0.92 * \ln(74) + 2.71$	Directional Distribution: 50% entering, 50% exiting T = 788 Average Vehicle Trip Ends 394 entering 394 exiting
	394 + 394 = 788

Queue shown is maximum after two cycles.

# APPENDIX F

## Conceptual Site Plan

**CHALLENGER HOMES - SKY VIEW  
PRELIMINARY UTILITY LAYOUT EXHIBIT**  
COLORADO SPRINGS, CO  
JANUARY 4, 2021

- UTILITY NOTES**
- ① CONNECT TO EXISTING WATER AND/OR WASTEWATER SYSTEM.
  - ② CONSIDER DOWNSIZING MAIN FROM 8-INCHES TO 4-INCHES. APPLICANT BELIEVES THAT ONLY A 8-INCH PERIMETER LOOP IS NEEDED FOR FIRE PROTECTION. MAKE SURE TO TAP HYDRANT FROM 8-INCH MAIN IF PORTIONS ARE DOWNSIZED.
  - ③ SPECIAL ATTENTION SHOULD BE PAID TO THESE UTILITY SERVICE TRENCHES. IF NOT ALLOWED BY CSU, MAIN WILL NEED TO BE EXTENDED SOUTH ALONG THE PRIVATE DRIVE TO ENCOMPASS THE LOT FRONTRAGE.
  - ④ GENERAL QUESTION. ARE UTILITY SERVICES ALLOWED TO BE PLACED UNDER DRIVEWAY BY CSU? IF SO, WE WANT TO CONFIRM THAT THE METER PIT IS ALSO ALLOWED IN THE DRIVEWAY.
  - ⑤ MULTI PURPOSE CONNECTION: SECONDARY EMERGENCY ACCESS + MAINTENANCE ACCESS TO CSU. WIDTH TO BE CONFIRMED WITH THE FIRE DISTRICT. MINIMUM 16-FT PER CSU CRITERIA.
  - ⑥ PROPOSED FIRE HYDRANT LOCATIONS TO BE CONFIRMED WITH THE FIRE DISTRICT. ASSUMED CRITERIA:
    - FIRE FLOW REQUIREMENT = 1,750 OR LESS
    - MIN. NUMBER OF HYDRANTS FOR A RESIDENTIAL UNIT = 1
    - AVERAGE SPACING BETWEEN = 500 FT
    - MAX. DISTANCE FROM STREET FRONTRAGE TO HYDRANT = 250 FT
    - HYDRANTS NOT ONLY LOCATED FOR MINIMUM SPACING CRITERIA BUT FOR EASE OF USE BY THE FIRE DISTRICT. APPLICANT GENERALLY TRIED TO LOCATE HYDRANTS AT INTERSECTIONS WHERE POSSIBLE SUCH THAT THE FIRE DISTRICT CAN MORE EASILY LOCATE AND USE THE HYDRANT.
