Attn: Gilbert LaForce
Engineering

Subject: Utility Trench Backfill, Curb and Gutter/Roadway Subgrade, Cement-Treated Roadway Subgrade, and Asphalt Placement – Revised Within the Public Streets Rights of Ways of:

The Trails at Aspen Ridge Filing No. 1
El Paso County, Colorado
Job No. 191072

Dear Mr. LaForce:

Representatives of Entech Engineering, Inc. periodically visited the site and performed field density testing during the subject construction processes. Testing was performed in general compliance with the frequency indicated in the El Paso County specifications. Results of field density tests have previously been provided. Field density tests were taken by Entech Engineering, Inc. personnel with test results presented in reports dated June 11, 2019 through October 10, 2022. Results generally indicate densities, which meet those specified in the El Paso County specifications.

Representatives of Entech Engineering, Inc. also periodically observed the curb and gutter/sidewalk, cement-treated roadway subgrade and the asphalt paving process for the street improvements. These materials appeared to be in general compliance with the specifications presented in the El Paso County specifications and appeared to be consistent with the materials assumed in the pavement design for the project.

This site and the adjacent sites (as affected by work performed the under El Paso County permit) are considered stable with respect to subsidence, sloughing of cut and fill slopes, revegetation or other ground cover.

If you have further questions regarding this letter, or the construction from a geotechnical point of view, please call.

Respectfully Submitted,

ENTECH ENGINEERING, INC.

Daniel P. Stegman
