Traffic

Site Development Plan

For this review, we feel the church will not exceed traffic counts. The church has about 100-150 families, but only about 50 regular attenders. Based on this, the traffic counts will not exceed the allowed traffic counts. In addition, the main traffic impact is on Sunday mornings where they will have (1) church service. Other days, staff will be minimal to 5-10 people. As the church grows, we do feel a traffic memo will be needed. Due to this, a formal Traffic Memo has been requested but have yet to receive this report. We will send over once received.

Based on the ITE and the proposed building area, trips generated on a Sunday would be expected to meet the requirement of ECM B.1.2.C; a traffic memo is required for this site. Comments will be provided on the TIS once it has been submitted.
