Traffic Engineer's Statement

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

Developer's Statement

I, the Developer, have read and will comply with all commitments made on my behalf within this report.

A handwritten signature in black ink, appearing to read 'Jeffrey C. Hodsdon'.

RE: Townhomes at Bradley Crossroads
El Paso County, CO
Traffic Impact Study
LSC #194210

Dear Mr. Gorman,

LSC Transportation Consultants, Inc. has prepared this traffic impact study for the proposed Townhomes at Bradley Crossroads residential development with 78 townhome units in El Paso County, Colorado. Located at El Paso County parcel ID 6502407102, the currently vacant 5.24-acre site is situated south of Bradley Road, north of Gladiator Drive, east of Lincoln Plaza Drive, and west of Hancock Expressway.

Three access points are proposed for the property (all existing):

- Three-quarter-movement access to Bradley Road
- Right-in/right-out (RIRO) access on Main Street
- Full-movement access to Gladiator Drive

The previous report by LSC for this site was dated March 22, 2019. This report has been prepared for submittal to El Paso County.

REPORT CONTENTS

The preparation of this report included the following:

- An inventory of existing roadway and traffic conditions on Bradley Road, Main Street, Gladiator Drive, and Lincoln Plaza Drive adjacent to the site, including surface conditions, functional classification, widths, pavement markings, traffic control signs, posted speed limits, intersection and access spacing, roadway and intersection alignments, roadway grades, and auxiliary turn lanes.

- Weekday peak-hour turning movement traffic counts at the intersection of Bradley Road/Lincoln Plaza Drive and Hancock Expressway/Bradley Road.
- Estimated average weekday traffic (AWT) volumes for all access points adjacent to the proposed residential development on Bradley Road and Main Street.
- Projections of 20-year background traffic volumes on Bradley Road, Main Street, Gladiator Drive, and Lincoln Plaza Drive adjacent to the site.
- The proposed site land use and access plan.
- Estimates of average weekday and weekend peak-hour trip generation for the proposed Townhomes at Bradley Crossroads development and the estimated directional distribution of site-generated vehicle-trips on the streets and intersections adjacent to the site.
- Projected site-generated and resulting total peak-hour intersection traffic volumes at the site access points on Bradley Road and Main Street.
- Projected total daily and peak-hour traffic volumes on Bradley Road and Main Street adjacent to the site.
- Intersection level of service analysis at all access points adjacent to the proposed residential development on Bradley Road and Main Street.
- Evaluation of existing and long-term projected intersection volumes to determine the short-term requirements for auxiliary right-/left-turn lanes on Bradley Road and Main Street adjacent to the site based on the criteria in El Paso County's *Engineering Criteria Manual* (ECM). Also included are potential long-term lane requirements.
- Findings and recommendations.

LAND USE AND ACCESS

Figure 1 shows the site location relative to the adjacent and nearby streets. The proposed Townhomes at Bradley Crossroads residential development is proposed to contain approximately 78 multi-family dwelling units. Located at El Paso County parcel ID 6502407102, the site is southwest of the intersection of Hancock Expressway/Bradley Road.

Figure 1 shows the area circulation and access points to the public streets and Figure 2 contain the proposed site plan showing the individual residential units, on-site circulation, and the development entry points.

Three existing access points to the adjacent public streets will be used by the property, with one on Bradley Road, one on Main Street and one on Gladiator Drive. All are currently two-way stop-sign-controlled (TWSC):

- Three-quarter access on Bradley Road (800 feet west of Hancock Expressway/Bradley Road)
- Right-in/Right-out access on Main Street (410 feet south of Hancock Expressway/Bradley Road)
- A full-movement access to Gladiator Drive.

PREVIOUS AREA TRAFFIC REPORTS

LSC has completed the following traffic studies for Lincoln Plaza/Bradley Crossroads:

- March 18, 2005 – For the entire Lincoln Plaza development, which included this site plus all other adjacent parcels (some of which have since been developed). This most recent version of this study was dated.
- May 10, 2006 – For the adjacent townhome development.
- June 10, 2008 – For Bradley Crossroads, which was a study for the remaining land in the original Lincoln Plaza development east of the townhome site which has since been developed adjacent to Lincoln Plaza Drive.
- May 13, 2010 – Addendum to the TIS for Bradley Crossroads
- July 12, 2010 – Trip Generation Memorandum for Bradley Crossroads Lots 6 and 7

Other Area Traffic Reports

The Bradley Storage Time development (dated June 1, 2017) for the site located on the north side of the intersection of Lincoln Plaza Drive/Bradley Road. The LSC study for the Proby/Hancock Commercial center (dated January 26, 2015) was also utilized, in part, to estimate the background traffic volumes at the Bradley/Hancock/Main Street intersection.

Previously Approved Land Use

The previous report for Bradley Crossroads (June 10, 2008) and the addendum report prepared in 2010 were based on a land-use site plan showing mini-warehouse land use for **most of (but not all of)** the portion of Bradley Crossroads now representing the currently proposed townhome site. This new proposed land use (townhomes) would have a greater traffic impact than if mini warehouses were to be constructed. However, this project is part of the larger overall Bradley Crossroads project with shared access points to the public street system. Therefore, the comparison should include all of Bradley Crossroads. The other uses currently assumed for the

remaining commercial lots include about 19,500 square feet of retail/shopping center building space plus one 3,000 square-foot fast food restaurant. These assumptions for land uses have been updated to reflect current 2019 market conditions based on discussions with the property owner. However, these are estimates only and are subject to change. A trip generation comparison to the Bradley Crossroads report trip generation estimate is presented in the trip generation section of this report.

The previously completed infrastructure, (including auxiliary turn lanes, turn lane storage taper and storage lengths, etc.) would still be adequate for the currently proposed townhome land uses. The current trip generation estimate remains lower than the original 2006 study upon which original recommendations for the turn lane infrastructure was based.

ROAD AND TRAFFIC CONDITIONS

Figure 1 shows the streets adjacent to and in the vicinity of the site. Adjacent streets serving the site are identified below followed by a brief description of each:

Bradley Road extends from just west of Academy Boulevard to Goldfield Drive. Bradley Road is classified as a Principal Arterial on the El Paso County *Major Transportation Corridors Plan (MTCP)*. Adjacent to the site, Bradley Road is a two-lane roadway with left-turn lanes and right-turn lanes at Lincoln Plaza Drive and a posted speed limit of 40 miles per hour (mph). The MTCP shows expansion of Bradley Road to a four-lane Principal Arterial by 2040.

Hancock Expressway is a Principal Arterial that extends north from Bradley Road and west to Fountain Boulevard, where it becomes Union Boulevard. South of Bradley Road, Hancock Expressway becomes Main Street. The intersection of Hancock/Main/Bradley is signalized with raised medians and left-turn lanes. Adjacent to the site, Hancock Expressway is a four-lane street with a raised median and a posted speed limit of 40 mph.

Lincoln Plaza Drive is a 40-foot-wide, two-lane Urban Local street that extends south from Bradley Road to Witches Hollow Lane.

Gladiator Drive is a two-lane Urban Local street that extends east-to-west from Lincoln Plaza Drive to Main Street. The eastbound approach of Gladiator Drive at Main Street is striped for exclusive left and right-turn lanes.

Pleasant Port View is a 28-foot-wide, two-lane, private access street connecting Bradley Road and Gladiator Drive, as shown in Figure 1 and Figure 2. The intersection of Bradley Road/Pleasant Port View is a three-quarter movement intersection, with the northbound left-turn movement prohibited.

Existing Traffic Volumes

Vehicular turning movement counts were conducted at the following intersections:

- Hancock Expressway/Bradley Road
 - Tuesday, March 12, 2019 from 6:30-8:30 a.m.
 - Tuesday, May 14, 2019 from 4:00-6:00 p.m.
- Bradley Road/Lincoln Plaza Drive
 - Wednesday, March 6, 2019 from 6:30-8:30 a.m.
 - Wednesday, March 6, 2019 from 4:00-6:00 p.m.
- Main Street/right-in/right-out (RIRO) access
 - Tuesday, March 12, 2019 from 6:30-8:30 a.m.
- Main Street/Gladiator Drive
 - Wednesday, May 8, 2019 from 6:30-8:30 a.m.
 - Tuesday, May 7, 2019 from 4:00-6:00 p.m.
- Gladiator Drive/Pleasant Port View
 - Wednesday, May 8, 2019 from 6:30-8:30 a.m.
 - Tuesday, May 7, 2019 from 4:00-6:00 p.m.

Figure 3 shows these turning movement volumes, as well as the average weekday traffic volumes (estimated based on factored peak-hour count data) on the study area streets. Raw count data is attached.

TRIP GENERATION

Estimates of the vehicle-trips projected to be generated by the Townhomes at Bradley Crossroads residential development have been made using the nationally published trip generation rates from *Trip Generation, 10th Edition, 2017* by the Institute of Transportation Engineers (ITE). ITE Land Use Category 220 – “Multi-Family Housing (Low-Rise),” along with corresponding trip generation rates, have been used to develop the trip generation estimates for site buildout. Figure 2 shows the site plan with 78 dwelling units within the proposed residential development.

Table 1 below presents a summary of the estimated site trip generation. A detailed trip generation estimate for the development, including ITE rates for the proposed land uses, is presented in Table 17 (attached).

Table 1: Estimated Site Vehicle-Trip Generation

Analysis Period	Weekday		
	In	Out	Total
Morning Peak Hour	9	29	38
Evening Peak Hour	30	18	48
Daily/24-hour	275	275	549

The proposed Townhomes at Bradley Crossroads residential development is projected to generate about 549 vehicle-trips on the average weekday during a 24-hour period, with approximately half entering and half exiting the site. During the morning peak hour, approximately 9 entering vehicles and 29 exiting vehicles would be generated. Approximately 30 entering and 18 exiting vehicles would be generated by the site during the evening peak hour.

The Appendix Table (attached) presents a current background trip generation estimate for the commercial portion and the overall Bradley Crossroads development and a comparison to prior reports. The overall trip generation is comparable to the prior 2010 and 2008 studies, although the morning peak hour trip estimate is slightly higher, and the evening peak hour trip estimate is slightly lower than the prior studies.

TRIP DISTRIBUTION AND ASSIGNMENT

Trip Directional Distribution

Estimating the directional distribution of site-generated vehicle-trips to the study area roads and intersections is a necessary component in determining the site's traffic impacts. Figure 4 shows the percentages of the site-generated vehicle-trips projected to be oriented to and from the site's major approaches. Estimates have been based on the following factors: the proposed new land use, the area street and road system serving the site, and the site's geographic location relative to unincorporated El Paso County and the City of Colorado Springs.

Site-Generated Traffic

Site-generated traffic volumes at the proposed site access points on Bradley Road and Main Street have been calculated by applying the directional distribution percentages estimated by LSC (from Figure 4) to the trip generation estimates (from Table 17). Figure 5 shows the projected site-generated traffic volumes for the weekday morning and evening peak hours.

Existing-Plus-Site-Generated Traffic Volumes

Figure 6 shows the sum of the existing traffic volumes (from Figure 3) and site-generated peak-hour traffic volumes (shown in Figure 5). These volumes represent the projected short-term total traffic following site buildout.

Estimated Future 2040 Background Traffic Volumes

Figure 7 shows the projected 20-year background traffic volumes for the year 2040. Background volumes include increases in through traffic and trips generated by other area future development, but do **not** include projected traffic to be generated by the proposed Townhomes at Bradley Crossroads residential development. Estimated 2040 background traffic volumes on Bradley Road and Main Street have been based in-part on estimates from the Bradley Storage Time report (which were based on projected 2040 volumes in the MTCP) with adjustments given the current traffic data. Background traffic volumes include estimates of additional trips to be generated by the remaining adjacent commercial parcels (which are currently vacant).

Future 2040 Total Traffic Volumes

Figure 8 shows the projected 2040 total traffic volumes, which are the sum of 2040 background traffic volumes (from Figure 7) plus the site-generated traffic volumes (from Figure 5).

LEVEL OF SERVICE ANALYSIS

The following intersections have been analyzed to determine the projected intersection levels of service for short- and long-term traffic scenarios for the morning and evening peak-hour time periods:

- Bradley Road/Lincoln Plaza Drive
- Three-quarter access on Bradley Road
- RIRO access on Main Street
- Bradley Road/Main Street
- Main Street/Gladiator Drive
- Gladiator Drive/Pleasant Port View

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection and is indicated on a scale from “A” to “F.” LOS A is indicative of little congestion or delay. LOS F indicates a high level of congestion or delay. Table 2 shows the level of service delay ranges for signalized and unsignalized intersections.

Table 2: Intersection Levels of Service Delay Ranges

Level of Service	Signalized Intersections	Unsignalized Intersections
	Average Control Delay (seconds per vehicle)	Average Control Delay (seconds per vehicle) ¹
A	≤ 10.0	≤ 10.0
B	10.1 – 20.0	10.1 – 15.0
C	20.1 – 35.0	15.1 – 25.0
D	35.1 – 55.0	25.1 – 35.0
E	55.1 – 80.0	35.1 – 50.0
F	≥ 80.1	≥ 50.1

¹ For unsignalized intersections, if V/C is > 1.00, then LOS is LOS F regardless of the projected average control delay per vehicle

Unsignalized Intersections

A summary of LOS during the weekday morning and evening peak hours for the following unsignalized intersections is shown in Table 3 and Table 4. Detailed Synchro and SimTraffic reports are attached.

- Bradley Road/Lincoln Plaza Drive
- Bradley Road/three-quarter access
- Main Street/RIRO access
- Main Street/Gladiator Drive
- Gladiator Drive/Pleasant Port View

Table 3: Unsignalized Intersection Level of Service Analysis Results (Part 1)

Scenario	Bradley Rd/Lincoln Plaza Dr*								RI/RO Access		Bradley + 3/4 Access			
	Traffic Control	EBL	WBL	NBL ¹	NBT ¹	NBR ¹	SBR ²	SBT ²	SBL ²	Traffic Control	EBR	Traffic Control	NBR	WBL
A.M. Peak Hour														
2019 Existing	TWSC	-	A	C	-	B	-	-	-	TWSC	B	TWSC	A	A
2019 Existing + Site						A								
2040 Background		B		C	A	B		A	C		C		B	A
2040 Background + Site		A				B	C							
P.M. Peak Hour														
2019 Existing	TWSC	-	A	C	-	B	-	-	-	TWSC	B	TWSC	A	
2019 Existing + Site						A							B	
2040 Background		A	A	C	A	B		A	C				B	B
2040 Background + Site				D		C			D				B	B

* SimTraffic analysis results shown in place of Synchro output for this intersection only. SimTraffic simulations indicated sufficient gaps would be created due to signalized intersection of Main St/Bradley Rd. This would allow several NBL turning vehicles to exit at a time.

¹ NB approach is actually a single-lane approach in the short term, but SimTraffic LOS results above are shown for individual NB turning movements

² SB approach is actually a single-lane approach in the short term, but SimTraffic LOS results above are shown for individual SB turning movements

TWSC = two-way stop sign control

EBL = eastbound left, WBL = westbound left, NBL = northbound left, SBL = southbound left

Table 4: Unsignalized Intersection Level of Service Analysis Results (Part 2)

Scenario	Main St/Gladiator Dr			Gladiator/Pleasant Port			
	Traffic Control	NBL	EBL	EBR	Traffic Control	EBL	SBL
A.M. Peak Hour							
2019 Existing	TWSC	A	C	B	TWSC	A	A
2019 Existing + Site		B	D	B		A	A
2040 Background					TWSC		
2040 Background + Site							
P.M. Peak Hour							
2019 Existing	TWSC	A	C	B	TWSC	A	A
2019 Existing + Site		B	D	B		A	A
2040 Background					TWSC		
2040 Background + Site							
EBL = eastbound left, WBL = westbound left, NBL = northbound left, SBL = southbound left							

As shown in Table 3 and Table 4, all turning movements/intersection approaches at all proposed site access intersections with Bradley Road, Gladiator Drive, and Main Street are projected to operate at LOS D or better during both peak periods through the 20-year horizon if they are to remain two-way stop-sign-controlled (TWSC).

Note: the level of service at the intersection of Bradley/Lincoln Plaza has been based on model results from a SimTraffic simulation analysis to better account for traffic gaps created on Bradley Road due to the traffic signal at the “upstream” intersection of Main/Hancock/Bradley. Although the northbound approach is striped for a single-lane approach, SimTraffic provides control delay simulation results for each turning movement. As such, Table 3 shows separate levels of service for left-, through-, and right-turning movements on the northbound and southbound approaches.

Signalized Intersection

A summary of signalized LOS for all short- and long-term traffic scenarios during the weekday morning and evening peak hours is shown in Table 5. Detailed Synchro reports are attached.

Table 5: Intersection Level of Service Analysis Results (Signalized)

Scenario	Hancock Expressway/Main St/Bradley Road					
	Traffic Control	Overall	EBL	WBL	NBL	SBL
A.M. Peak Hour						
2019 Existing	Signal	B	B	B	B	D
2019 Existing + Site		C	C	C	C	B
2040 Background						C
2040 Background + Site						
P.M. Peak Hour						
2019 Existing	Signal	B	B	B	B	C
2019 Existing + Site		C	C	D	B	C
2040 Background						
2040 Background + Site						
EBL = eastbound left, WBL = westbound left, NBL = northbound left, SBL = southbound left						

For all individual turning movements and overall, the signalized intersection of Bradley Road/Main Street are projected to operate at LOS D or better during both peak hours through the 2040 horizon year.

TRAFFIC SIGNAL WARRANT ANALYSIS

The intersection of Bradley Road/Lincoln Plaza Drive has been analyzed to evaluate the potential for meeting a warrant(s) for a traffic control signal in the future. The combination of major street approach volumes (includes the sum of northbound and southbound approach volumes) and minor street left-turn volumes (eastbound approach) were analyzed to determine if the combination would exceed the threshold criteria for Four-Hour Vehicular Volume Traffic Signal Warrants and applicable other warrants in the *2009 Manual on Uniform Traffic Control Devices (MUTCD)*.

A summary of traffic signal warrant results is described in Table 6, followed by a description of each warrant.

Table 6: Traffic Signal Warrants Summary

MUTCD Traffic Signal Warrants	LSC Analysis Performed (if applicable to this intersection)
Warrant 1 – Eight-Hour Vehicular Volume	Analyzed the Four Hours counted for the AM and PM Peaks (2 hours in AM and 2 Hours in PM)*
Warrant 2 – Four-Hour Vehicular Volume	Analyzed the Four Hours counted for the AM and PM Peaks (2 hours in AM and 2 Hours in PM)
Warrant 3 – Peak Hour	Not applicable
Warrant 4 – Pedestrian Volume	Not likely applicable as this is not a location with significant volumes of crossing pedestrians
Warrant 5 – School Crossing	Not applicable
Warrant 6 – Coordinated Signal System	Not applicable
Warrant 7 – Crash Experience	Criteria A - LSC is not aware of any "trial of alternatives" by EPC Public Works at this location
	Criteria B - LSC has requested Intersection Crash History from the Colorado State Patrol to verify that Criteria B* of Warrant 7 has not been satisfied. Although not anticipated, if crash history indicates that Criteria B is satisfied, LSC will submit an updated traffic report.
	Criteria C - LSC has analyzed the Four Hours counted for the AM and PM Peaks (2 hours in AM and 2 Hours in PM) against volume thresholds in Criteria C (80 percent values of Warrant No. 1)
Warrant 8 – Roadway Network	Not applicable
Warrant 9 – Intersection Near a Grade Crossing	Not applicable

* Note: LSC has performed an analysis of the four hours counted for the AM and PM peak periods. AM Counts were conducted between 6:30 am and 8:30 am to determine the AM peak hour volumes and PM Counts were conducted between 4:00 pm and 6:00 pm to determine the PM peak hour volumes. The four hour volume data collected plus estimated site traffic volumes for these same hours as well as 2040 future projections for these same four hours, have been evaluated against the Warrant 1 volume thresholds, the Warrant 2 volume thresholds, and the Criteria C thresholds in Warrant 7. This analysis of these four hours has been performed in lieu of an analysis of the off-peak hours as well in order to first determine if thresholds are met during the side-street and major street peak traffic. The major street traffic peak traffic occurs during the PM and given the primarily residential development served by Lincoln Plaza Drive, the side-street traffic peaks during the AM.

**Warrant 7, Criteria A: *Five or more reported crashes, of types susceptible to correction by a traffic control signal, have occurred within a 12-month period, each crash involving personal injury or property damage apparently exceeding the applicable requirements for a reportable crash.*

For Warrants 1, 2 and 7, LSC has performed an analysis of the four hours counted for the AM and PM peak periods. AM Counts were conducted between 6:30 am and 8:30 am to determine the AM peak hour volumes and PM Counts were conducted between 4:00 pm and 6:00 pm to determine the PM peak hour volumes. The four-hour volume data collected plus estimated site traffic volumes for these same hours as well as 2040 future projections for these same four hours, have been evaluated against the Warrant 1 volume thresholds, the Warrant 2 volume thresholds, and the Criteria C thresholds in Warrant 7.

This analysis of these four hours has been performed first, without the inclusion off-peak hours, in order to provide an indication that a warrant may be met or may be close to being met. In order for the Four-Hour Traffic Signal Warrant to be satisfied, the four hours analyzed or some combination of four peak/off peak hours would need to exceed the volume thresholds. In the case of the eight-hour warrant, the four hours analyzed plus four other hours of the day (or some other combination of eight hours) would need to meet the eight-hour volume thresholds. The major street traffic peak traffic occurs during the PM and given the primarily residential development served by Lincoln Plaza Drive, the side-street traffic peaks during the AM.

Four separate one-hour periods within the following morning and late afternoon/evening periods have been analyzed:

- 6:30 a.m. – 7:30 a.m.
- 7:30 a.m. -- 8:30 a.m.
- 4:00 p.m. – 5:00 p.m.
- 5:00 p.m. - 6:30 p.m.

Warrant 1 – Eight-Hour Vehicular Volume Warrant

The details of this warrant are contained in Section 4C.02 of the MUTCD.

2019 Existing Plus Site-Generated Traffic

Condition A

Zero of the four studied one-hour analysis periods are projected to meet eight-hour vehicular volume criteria for the short-term background-plus-site traffic scenario. A minimum of 500 vehicles on the major street (total of both approaches) and 150 vehicles (higher-volume minor street approach, one direction only) are required to satisfy “Condition A” during each of the eight hours analyzed. Refer to Table 7 for the major/minor street volume combinations used for the “Condition A” Eight-Hour Vehicular Volume Warrant analysis during the short-term background plus site-generated traffic condition.

Table 7: Major/Minor Volumes for Signal Warrant No. 1 (Condition A)

Start Time	End Time	Volumes		Condition A Thresholds		Meets 8-Hour Warrant Thresholds?
		Major Street	Minor Street	Major Street (one lane)	Minor Street (one lane)	
6:30 AM	7:30 AM	1034	73	500	150	No
7:30 AM	8:30 AM	731	77	500	150	No
4:00 PM	5:00 PM	1030	47	500	150	No
5:00 PM	6:00 PM	1027	42	500	150	No
Number of hours meeting warrant thresholds/ Hours required to satisfy the warrant						0 / 8
Note: Condition A thresholds are based on MUTCD Table 4C-1 (100% Values)						

Condition B

Zero of the four studied one-hour analysis periods are projected to meet eight-hour vehicular volume criteria for the short-term background-plus-site traffic condition. A minimum of 750 vehicles on the major street (total of both approaches) and 75 vehicles (higher-volume minor street approach, one direction only) are required to satisfy “Condition B” during each of the eight hours. Refer to Table 8 for the major/minor street volume combinations used for the “Condition

B" Eight-Hour Vehicular Volume Warrant analysis during the short-term background plus site-generated traffic condition.

Table 8: Major/Minor Volumes for 8-Hour Signal Warrants (Condition B)

Projected 2040 Total Traffic Volumes

Similar tables (9 and 10) have been prepared for the projected 2040 Background-plus-site-generated traffic condition.

Table 9: Major/Minor Volumes for 8-Hour Signal Warrants (Condition A)

Start Time	End Time	Volumes		Condition A Thresholds		Meets 8-Hour Warrant Thresholds?
		Major Street	Minor Street	Major Street (two or more lanes)	Minor Street (one lane)	
6:30 AM	7:30 AM	1431	112	600	150	No
7:30 AM	8:30 AM	1011	118	600	150	No
4:00 PM	5:00 PM	1474	73	600	150	No
5:00 PM	6:00 PM	1470	66	600	150	No

Table 10: Major/Minor Volumes for 8-Hour Signal Warrants (Condition B)

Start Time	End Time	Volumes		Condition B Thresholds		Meets 8-Hour Warrant Thresholds?
		Major Street	Minor Street	Major Street (two or more lanes)	Minor Street (one lane)	
6:30 AM	7:30 AM	1431	112	900	75	Yes
7:30 AM	8:30 AM	1011	118	900	75	Yes
4:00 PM	5:00 PM	1474	73	900	75	No
5:00 PM	6:00 PM	1470	66	900	75	No
Number of hours meeting warrant thresholds/ Hours required to satisfy the warrant						2 / 8
Note: Condition B thresholds are based on MUTCD Table 4C-1 (100% Values)						

Table 10 shows that two of the four hours analyzed (two out of eight total hours needed) would meet the satisfy the warrant criteria.

Warrant 2 - Four-Hour Vehicular Warrant

Details of this warrant are contained in Section 4C.03 of the MUTCD.

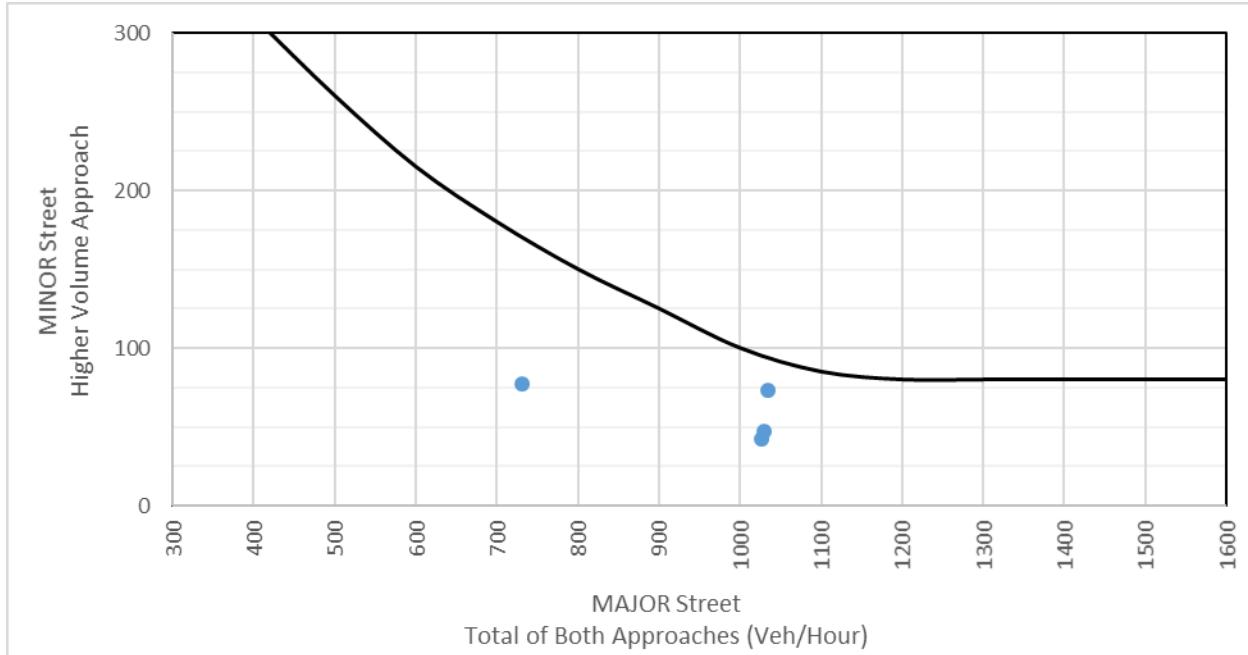

MUTCD Warrant 2 (Four-Hour Vehicular Volume) contains a graph with threshold curves based on major and minor street traffic volumes, the number of intersection approach lanes on the major and minor streets, and the speed of the major street. This graph is shown in MUTCD Figure 4C-1.

2019 Existing Plus Site-Generated Traffic

Results from the four-hour traffic signal warrant analysis for the short-term background plus site-generated traffic scenario are shown in the Warrant 2, Four-Hour Vehicular Volume (MUTCD Figure 4C-1) signal warrant chart in Figure 9. Fewer than four (zero) separate major/minor street volume data points exceeded the minimum threshold curve for an intersection with one lane for the major approach and one lane for the minor (northbound) approach. As a result, the Four-Hour Vehicular Volume Traffic Signal Warrant threshold at the intersection of Bradley Road/Lincoln Plaza Drive is **not** projected to be exceeded during the morning or evening peak periods based on the 2019 existing plus site-generated traffic scenario.

Note: Northbound right turns have not been included in the side-street volumes.

Figure 9: MUTCD Warrant 2, Four-Hour Vehicular Volume (2019 Existing + Site)

Major and minor street volumes shown in Figure 9 above are summarized in Table 11 below.

Table 11: Major/Minor Volumes for 4-Hour Signal Warrants (Short-Term Background + Site)

Start	End	Major Street Volume	Minor Street Volume	4-Hour Warrant Threshold Met?
6:30	7:30	1034	73	No
7:30	8:30	731	77	No
4:00	5:00	1030	47	No
5:00	6:00	1027	42	No

2040 Total Traffic

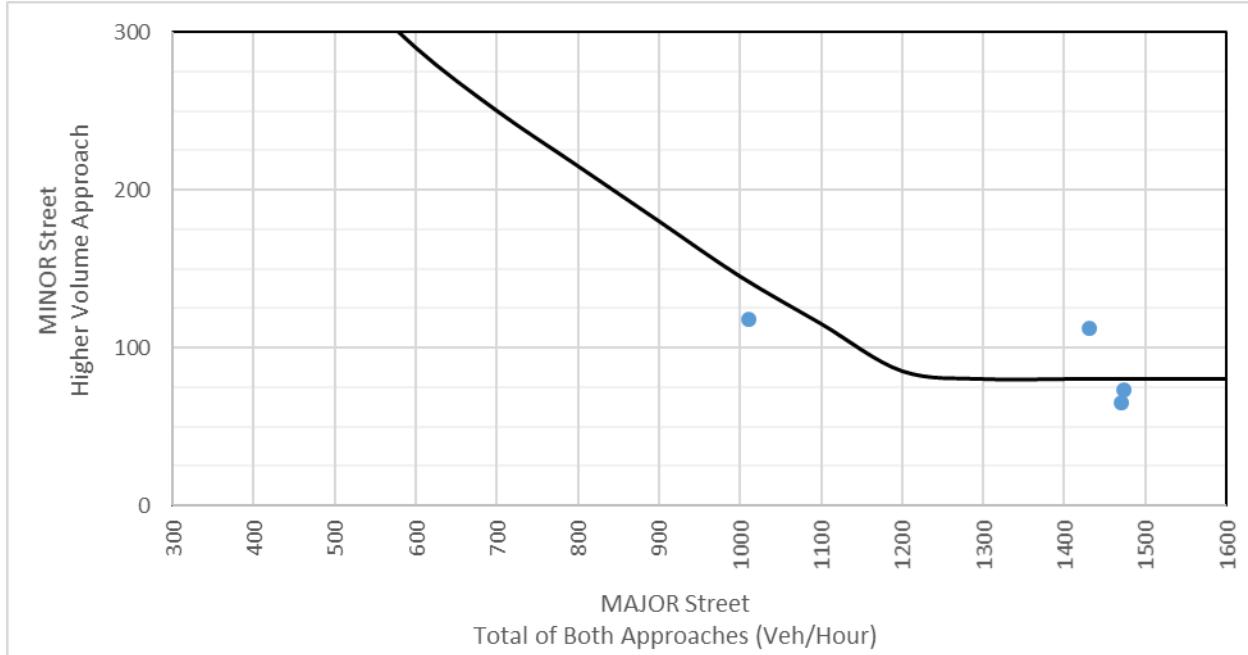

Note: The 2016 update to the MTCP shows expansion of Bradley Road to a four-lane roadway by 2040. As such, the MUTCD curve for an intersection with two lanes for the major approach and one lane for the minor (northbound) approach was used for the 2040 total traffic scenario.

Results from the four-hour traffic signal warrant analysis for the 2040 background-plus-site-generated traffic scenario are shown in the Warrant 2, Four-Hour Vehicular Volume (MUTCD Figure 4C-1) signal warrant chart in Figure 10. Fewer than four (one) separate major/minor street volume data points exceeded the minimum threshold curve to meet a signal warrant. As a result, the Four-Hour Vehicular Volume Traffic Signal Warrant is **not** projected to be met at the

intersection of Bradley Road/Lincoln Plaza Drive for the 2040 background plus site-generated traffic scenario.

Note: Northbound right turns have not been included in the side-street volumes.

Figure 10: MUTCD Warrant 2, Four-Hour Vehicular Volume (2040 Background + Site)

Major and minor street volumes shown in Figure 10 above are summarized in Table 12 below.

Table 12: Major/Minor Volumes for 4-Hour Volume Signal Warrants (2040 Background + Site)

Start	End	Major Street Volume	Minor Street Volume	8-Hour Warrant Threshold Met?
6:30	7:30	1431	112	Yes
7:30	8:30	1011	118	No
4:00	5:00	1474	73	No
5:00	6:00	1470	66	No

Warrant 3 – Peak Hour

Warrant 3, which is only applied in unusual cases in which large numbers of vehicles use a facility over a short time, was not applicable to this study.

Warrant 4 – Pedestrian Volume

Warrant 4 is not likely applicable, as few pedestrians were observed during data collection periods.

Warrant 5 – School Crossing

Warrant 5, related to school crossings, was not applicable since the intersection is not designated as a school crossing.

Warrant 6 – Coordinated Signal System

Warrant 6 is considered when adding a signal is necessary to maintain proper platooning of vehicles within a coordinated signal system. However, this warrant was not applicable because the distance between the intersection of Bradley Road/Lincoln Plaza Drive and the signalized intersection of Hancock Expressway/Main Street/Bradley Road is less than 1,000 feet.

Warrant 7 – Crash Experience

From the MUTCD: *The Crash Experience signal warrant conditions are intended for application where the severity and frequency of crashes are the principal reasons to consider installing a traffic control signal.*

Details of this warrant are contained in Section 4C.08 of the MUTCD. There are three parts to this warrant [taken from the MUTCD]:

Standard:

The need for a traffic control signal shall be considered if an engineering study finds that all of the following criteria are met:

- A. *Adequate trial of alternatives with satisfactory observance and enforcement has failed to reduce the crash frequency; and*
- B. *Five or more reported crashes, of types susceptible to correction by a traffic control signal, have occurred within a 12-month period, each crash involving personal injury or property damage apparently exceeding the applicable requirements for a reportable crash; and*
- C. *For each of any 8 hours of an average day, the vehicles per hour (vph) given in both of the 80 percent columns of Condition A in Table 4C-1 (see Section 4C.02), or the vph in both of the 80 percent columns of Condition B in Table 4C-1 exists on the major-street and the higher-volume minor-street approach, respectively, to the intersection, or the volume of pedestrian traffic is not less than 80 percent of the requirements specified in the Pedestrian Volume warrant. These major-street and minor-street volumes shall be for the*

same 8 hours. On the minor street, the higher volume shall not be required to be on the same approach during each of the 8 hours.

Based on the review of the crash data, part B of this warrant is not satisfied as fewer than five crashes *of types susceptible to correction by a traffic control signal* have occurred within the past 12 months. Please refer to the crash history data spreadsheet provided with this submittal for details.

2019 Existing Plus Site-Generated Traffic

As shown in Table 13, the volume thresholds in Part C, Condition A of this warrant are not projected to be exceeded in the short-term.

Table 13: Existing + Site Major/Minor Volumes for Crash Signal Warrants (Condition A)

As shown in Table 14, two hours of the volume thresholds in Part C, Condition B of this warrant are projected to be exceeded in the short-term.

Table 14: Existing-Plus-Site Major/Minor Volumes for Crash Signal Warrants (Condition B)

2040 Total Traffic

As shown in Table 15, the volume thresholds in Part C, Condition A of this warrant are not projected to be exceeded in the long-term.

Table 15: 2040 Major/Minor Volumes for Crash Signal Warrants (Condition A)

As shown in Table 16, four hours of the volume thresholds in Part C, Condition B of this warrant are projected to be exceeded in the long-term. Other hours (off peak hours) may be met as well. However, A, B and C conditions would all need to be met before this warrant would be satisfied.

Table 16: 2040 Major/Minor Street Volumes for Crash Signal Warrants (Condition B)

Start Time	End Time	Volumes		Condition B Thresholds		Meets 8-Hour Warrant Thresholds?
		Major Street	Minor Street	Major Street (two or more lanes)	Minor Street (one lane)	
6:30 AM	7:30 AM	1431	112	720	60	Yes
7:30 AM	8:30 AM	1011	118	720	60	Yes
4:00 PM	5:00 PM	1474	73	720	60	Yes
5:00 PM	6:00 PM	1470	66	720	60	Yes
<i>Number of hours meeting warrant thresholds/ Hours required to satisfy the warrant</i>						4 / 8
Note: Condition B thresholds are based on MUTCD Table 4C-1 (80% Values)						

Warrant 8 – Roadway Network

Even though the intersection had over five hours of at least 1,000 vehicles per hour on a non-normal business day (Saturday), Warrant 8 is not applicable. None of the three MUTCD-defined characteristics of the intersection are true, which state the intersection must:

- Be part of a street or highway system that serves as the principal network for through traffic
- Include rural or suburban highways outside, entering, or traversing a city
- Appear as a major route on the City of Houston's 2012 Major Thoroughfare and Freeway Plan

Warrant 9 – Intersection Near At-Grade Crossing

Warrant 9 was not applicable since the intersection of Bradley Road/Lincoln Plaza Drive is not located near an at-grade crossing.

AUXILIARY TURN LANE ANALYSIS

Auxiliary left- and right-turn lanes already have been constructed on Bradley Road between the intersections of Bradley Road/Lincoln Plaza Drive and Bradley Road/Hancock/Main Street in anticipation of future buildout of all these undeveloped parcels. These lane improvements were approved and constructed as part of the overall/greater Lincoln Plaza development.

ROADWAY IMPROVEMENT FEE PROGRAM

This project will be required to participate in the El Paso County Road Improvement Fee Program. It is our understanding that the Townhomes at Bradley Crossroads applicant will opt out of the two PID options. The 2019 “full fee” amount is \$2,407 per multi-family dwelling unit. Based on 78 dwelling units, the total building permit fee would be \$187,746.

CONCLUSIONS

The site is projected to generate about 549 new driveway vehicle-trips on the average weekday.

During the weekday morning peak hour of adjacent street traffic, 9 vehicles would enter the site while 30 vehicles would exit.

During the weekday evening peak hour of adjacent street traffic, 30 vehicles would enter the site while 18 vehicles would exit.

All individual turning movements and approaches at all studied intersections are projected to operate at LOS D or better during both peak hours through the 2040 horizon year.

As this project is part of a larger previously approved and partially completed development, the offsite and onsite roadway infrastructure is already in-place.

Projected future volumes at the currently unsignalized intersection of Bradley Road/Lincoln Plaza Drive would **not** exceed the MUTCD threshold criteria for Eight Hour or Four-Hour Vehicular Volume Traffic Signal Warrants based on the four hours analyzed (the morning and early evening “commuter” peak periods). Please refer to the traffic signal warrant section for additional details.

Intersection Summary

Area Type: Other

Cycle Length: 100

Actuated Cycle Length: 97

Natural Cycle: 75

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.85

Intersection Signal Delay: 27.2

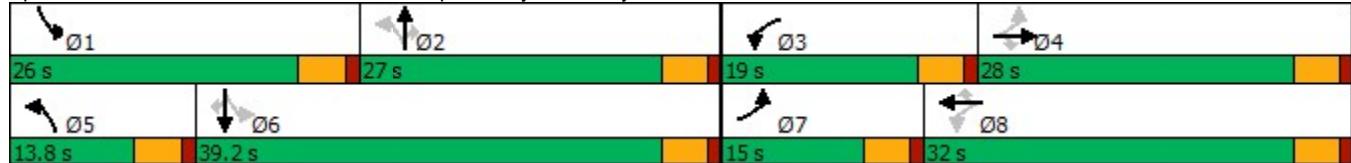

Intersection LOS: C

Intersection Capacity Utilization 78.2%

ICU Level of Service D

Analysis Period (min) 15

Splits and Phases: 3: Main St/Hancock Expressway & Bradley Rd
