MEMORANDUM

DATE: August 14, 2017

TO: Elizabeth Nijkamp – El Paso County Planning and Community Development

FROM: Jeffrey C. Hodsdon - LSC Transportation Consultants, Inc. *JCH*

SUBJECT: Carriage Meadows South at Lorson Ranch Filing No. 1
Response to Comments Memorandum
LSC #164240

Following are the LSC Transportation Consultants, Inc. responses to the El Paso County Planning and Community Development August 3, 2017 comments regarding the June 21, 2017 Updated Traffic Impact and Access Analysis by LSC.

1. *Please do not use back ground traffic in your calculations for percentages. The Lorson/MS needs a number assigned to it at this time.*

LSC Response: Only Lorson Ranch development traffic has been included in the calculation. The report refers to “background traffic” as any traffic not generated by Carriage Meadows South. The updated report includes a signal percentage calculation table that identifies the Lorson developments included in the calculation. The traffic report has been updated to include a specific dollar amount associated with Carriage Meadows South. The report also contains updated language explaining our recommendation for the timing of this escrow payment to the County.

2. *Please do not use background traffic, 100% of the dollar amount should be distributed between these three developments (the residential, and tract N and O).*

LSC Response: Only Lorson Ranch development traffic has been included in the calculation. The report refers to “background traffic” as any traffic not generated by Carriage Meadows South. The updated report includes a signal percentage calculation table that identifies the Lorson developments included in the calculation. Tracts N and O have been included as well as Carriage Meadows South and Lorson East residential developments. The traffic report has

been updated to include a specific dollar amount associated with Carriage Meadows South as well as these other future developments. The report also contains updated language explaining our recommendation for the timing of this escrow payment to the County. Basically, we recommend the actual payment of the escrow be deferred until timing of the construction of a bridge over the main channel of the Jimmy Camp is determined. The likely scenario is that a Lorson Ranch East plat would run concurrently with the bridge construction over the main channel. The escrow amount and timing for Carriage Meadows South at Lorson Ranch Filing No. 1 could be confirmed or recalculated at that time. The reason for this is so the developer will not need to pay a large escrow amount now as the signal will not meet traffic volume warrants (based on the TIS projections) prior to the construction of the bridge over the main channel.

Carriage Meadows South at Lorson Ranch Filing No 1 Updated Traffic Impact and Access Analysis (LSC #164240) August 14, 2017

Traffic Engineer's Statement

This traffic report and supporting information were prepared under my responsible charge and they comport with the standard of care. So far as is consistent with the standard of care, said report was prepared in general conformance with the criteria established by the County for traffic reports.

Colorado Springs, CO 80903

RE: Carriage Meadows South at Lorson Ranch
Filing No. 1
El Paso County, Colorado
Updated Traffic Impact and Access Analysis
LSC #164240

Dear Mr. Mark:

LSC Transportation Consultants, Inc. has prepared this updated traffic impact analysis for the 234-lot Carriage Meadows South at Lorson Ranch Filing No. 1 residential development to be located south of Fontaine Boulevard and east of Marksheffel Road within the Lorson Ranch development in El Paso County, Colorado. The site location is shown on Figure 1.

REPORT CONTENTS

The report contains the following:

- Recent/current street and traffic conditions adjacent to and in the vicinity of the site including the street widths, lane geometries, traffic controls, posted speed limits, street classification, etc.
- Existing traffic volumes at the key intersections in the vicinity of the site and estimates of short-term and 2040 background traffic volumes.
- The projected average weekday and peak-hour vehicle-trips to be generated by the site.
- The assignment of the projected trips to the adjacent street system.
- The resulting short-term and 2040 total traffic volumes on the street system.
- The resulting traffic impacts. The traffic impacts have been quantified by determining the future levels of service at the intersections of Marksheffel Road/Lorson Boulevard, Marksheffel Road/Fontaine Boulevard, the proposed street connection to Fontaine Boulevard, and the proposed site access point intersections on Lorson Boulevard.
- Recommendations for street functional classification, the Lorson Boulevard intersections, traffic controls, and auxiliary turn lanes.

SITE DEVELOPMENT AND LAND USE

The Carriage Meadows South at Lorson Ranch Filing No. 1 site is planned to be developed with 234 lots for single-family homes. A street connection is proposed to Fontaine Boulevard about 1,080 feet east of Marksheffel Road. Staff has indicated this street connection will require a deviation to the *El Paso County Engineering Criteria Manual*. A deviation request has been prepared and included with this resubmittal. Public street access points to the future Lorson Boulevard are planned at about 900 and 1,900 feet east of Marksheffel Road. The site plan is shown in Figure 2.

ROADWAY AND TRAFFIC CONDITIONS

Area Roadways

Figure 1 shows the roadways in the vicinity of the site. The major roadways are identified below, followed by a brief description of each.

- **Marksheffel Road** extends north from the Link Road/C&S Road intersection in Fountain, Colorado to north of Woodmen Road. Marksheffel Road is shown as a future four-lane Expressway on the County *Major Transportation Corridors Plan (MTCP)*. The posted speed limit on Marksheffel Road at Fontaine Boulevard is 45 miles per hour (mph). The PPRTA is currently upgrading Marksheffel Road between Mesa Ridge Parkway and Bradley Road. Road construction is underway. This includes intersection improvements at the Fontaine Boulevard intersection.
- **Fontaine Boulevard** is designated as a four-lane Urban Principal Arterial from Marksheffel Road east to Stingray Lane and has been constructed as such. The applicant will be dedicating 130 feet of right-of-way east of Stingray Lane for a future four-lane Principal Arterial. The north half-section will be constructed as development progresses east. The section west of Marksheffel is shown on the *Major Transportation Corridors Plan* as a two-lane Minor Arterial. The cross section from Marksheffel to Cottonwood Grove Drive has been constructed as a mix of rural and urban cross sections and the section between Cottonwood Grove Drive and Powers is a rural two-lane roadway section. The posted speed limit on Fontaine Boulevard is 35 mph just east of (and a short distance west of) Marksheffel Road. The speed limit increases to 45 mph just east of the bridge over Jimmy Camp Creek.
- **Lorson Boulevard** is a planned continuous roadway that will extend from Marksheffel Road about one-half mile south of Fontaine Boulevard east across both Jimmy Camp Creek and the East Tributary. Lorson Boulevard will be classified as an Urban Non-Residential Collector Street. The street width will be modified for a 44-foot street width rather than the standard 52-foot street width per the approved deviation. In the short term, Lorson Boulevard is planned to extend through this project, across Jimmy Camp Creek to Stingray Lane.

Existing Traffic Conditions

Figure 3 shows the recent traffic volumes at the intersection of Marksheffel Road/Fontaine Boulevard. The traffic volumes were based on traffic counts conducted by LSC in March 2017. The traffic count reports are attached.

Existing Levels of Service

Level of service (LOS) is a quantitative measure of the level of congestion or delay at an intersection. Level of service is indicated on a scale from "A" to "F." LOS A represents control delay of less than 10 seconds for unsignalized and signalized intersections. LOS F represents control delay of more than 50 seconds for unsignalized intersections and more than 80 seconds for signalized intersections. Table 1 shows the level of service delay ranges.

Table 1 Intersection Levels of Service Delay Ranges			
Level of Service	Signalized Intersections		Unsignalized Intersections
	Average Control Delay (seconds per vehicle)	V/C ⁽¹⁾	Average Control Delay (seconds per vehicle) ⁽²⁾
A	10.0 sec or less	less than 0.60	10.0 sec or less
B	10.1-20.0 sec	0.60-0.69	10.1-15.0 sec
C	20.1-35.0 sec	0.70-0.79	15.1-25.0 sec
D	35.1-55.0 sec	0.80-0.89	25.1-35.0 sec
E	55.1-80.0 sec	0.90-0.99	35.1-50.0 sec
F	80.1 sec or more	1.00 and greater	50.1 sec or more

(1) Source: *Transportation Research Circular 212*

(2) For unsignalized intersections if V/C ratio is greater than 1.0 the level of service is LOS F regardless of the projected average control delay per vehicle.

The intersection of Marksheffel/Fontaine was analyzed to determine the existing levels of service using Synchro. Figure 3 shows the level of service analysis results. As shown on the figure all movements this intersection are currently operating at a level of service C or better during the peak hours. The level of service (LOS) reports are attached.

SHORT-TERM (YEAR 2020) BACKGROUND TRAFFIC

Background traffic is the traffic estimated to be on the roadways without the Carriage Meadows South at Lorson Ranch Filing No. 1 traffic. Background traffic includes the March 2017 traffic (from Figure 3) and increases in through traffic on Marksheffel Road due to both regional growth and the extension of Mesa Ridge Parkway east to Marksheffel Road. The portion of the existing traffic volumes were also assumed to be rerouted due to the extension of Mesa Ridge Parkway east to Marksheffel Road. A portion of the existing traffic that currently travels to and from the west

on Fontaine Boulevard was assumed to shift to travel to and from the south on Marksheffel Road to this new connection. The short-term background traffic also includes additional traffic generated by buildup of the residential portion of Lorson Ranch subdivisions north of Lorson Boulevard between Jimmy Camp Creek and the East Tributary and the Carriage Meadows North subdivision located north of Fontaine Boulevard and east of Marksheffel Road but assumes zero traffic for parcels east of the east tributary and zero traffic generated by Carriage Meadows South at Lorson Ranch Filing No. 1. The short-term background volumes assume Lorson Boulevard has been extended across and east of Jimmy Camp Creek to Stingray Lane. A portion of the existing traffic was assumed to be rerouted to use this new connection. Note: This scenario assuming a new bridge across Jimmy Camp Creek prior to any new subdivisions after Carriage Meadows South at Lorson Ranch Filing No. 1 has been carried through from earlier Carriage Meadows reports, however as noted in the recently completed Lorson East report, another potential scenario would be development of dwelling units in Lorson Ranch East until the dwelling unit cap is reached prior to the construction of the bridge over Jimmy Camp Creek. Under the scenario in the Lorson Ranch East report, the bridge over the East Tributary would be constructed before the bridge over the main channel of Jimmy Camp Creek. The short-term background traffic volumes are shown in Figure 4.

2040 BACKGROUND TRAFFIC

Figure 5a shows the projected 2040 background traffic volumes. The 2040 background traffic volumes are based on estimates of traffic projected to be generated at buildup of the Lorson Ranch Sketch Plan and traffic volumes shown in the *Marksheffel Road South Corridor Preservation Plan* dated July 2014. The 2040 background volumes assume Lorson Boulevard has been extended east of Jimmy Camp Creek and the East Tributary.

Figure 5b shows the 2040 lane geometry and projected level of service for the intersections of Marksheffel/Lorson, Marksheffel/Fontaine and Fontaine/Carriage Meadows.

TRIP GENERATION

Estimates of the traffic volumes expected to be generated by the site have been made using the nationally published trip generation rates found in *Trip Generation, 9th Edition, 2012* by the Institute of Transportation Engineers (ITE). Table 1 shows the results of the trip generation estimates.

As shown in Table 2, the site could be expected to generate about 2,228 new vehicle-trips on the average weekday, with about 1,114 vehicles entering and 1,114 vehicles exiting in a 24-hour period. During the morning peak hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 44 vehicles would enter and 132 vehicles would exit the site. During the afternoon peak hour, which generally occurs for one hour between 4:30 and 6:30 p.m., about 147 vehicles would enter and 87 vehicles would exit the site.

TRIP DISTRIBUTION AND ASSIGNMENT

The directional distribution of the site-generated traffic volumes on the street and roadway system serving the site is one of the most important factors in determining the site's traffic impacts. Figure 6 shows the external trip distribution estimates (external to Lorson Ranch). The directional distribution estimates have been based on the location of the site with respect to the regional residential, employment, commercial, and activity centers; the land use proposed; the access/roadway connections assumed; and the roadway network system. The directional distribution estimate assumes Mesa Ridge Parkway has been extended east to Marksheffel Road.

When the external trip distribution percentages (from Figure 6) are applied to the trip generation estimates (from Table 2), the resulting site-generated traffic volumes can be determined. Figures 7 and 8 show the short-term and long-term site-generated traffic volume estimates, respectively. The short-term site-generated traffic volumes assume all trips generated by Carriage Meadows South at Lorson Ranch Filing No. 1 have origins and destinations outside of Lorson Ranch. The long-term site-generated volumes assume a portion of the trips will travel within the Lorson Ranch Development to and from the planned commercial areas to be located near the intersection of Carriage Meadows Drive/Fontaine Boulevard and the planned school site located north of Fontaine Boulevard and east of the east tributary. The number of vehicle-trips assigned within the Lorson Ranch development were based on the internal trip estimates shown in Table 2 of the *Lorson Ranch Sketch Plan Traffic Technical Memorandum* by LSC dated April 15, 2016. Internal trips from this site are shown in Table 2.

PROJECTED TOTAL TRAFFIC

Figure 9a shows the short-term (year 2020) total traffic volumes. These short-term volumes are the sum of the short-term background traffic volumes (from Figure 4) plus the short-term site-generated traffic volumes (from Figure 7).

Figure 10a shows the 2040 total traffic volumes. These 2040 total traffic volumes are the sum of the 2040 background traffic volumes (from Figure 5a) plus the long-term site-generated traffic volumes (from Figure 8). Figure 10a also shows the projected 2040 traffic volumes at the intersection of Fontaine/Carriage Meadows assuming the future retail parcels within Lorson Ranch have not been developed by 2040. These volumes are for use in the traffic signal warrant analysis for this intersection only.

PROJECTED LEVELS OF SERVICE

The intersections of Marksheffel/Lorson, Marksheffel Road/Fontaine Boulevard, and Fontaine Boulevard/Carriage Meadows and the two site access points to Lorson Boulevard have been analyzed to determine the projected levels of service for the short-term and 2040 background and total traffic volumes based on the signalized method of analysis from Synchro and the unsignalized method of analysis procedures outlined in the *Highway Capacity Manual, 2010 Edition* by the Transportation Research Board. The level of service reports are attached. The results of the analysis are shown in Figures 4, 5b, 9b and 10b.

Figure 9b shows the short-term lane geometry and projected level of service for the intersections of Marksheffel/Lorson, Marksheffel/Fontaine, Fontaine/Carriage Meadows, and the site access points to Lorson Boulevard.

Figure 10b shows the 2040 lane geometry and projected level of service for the intersections of Marksheffel/Lorson, Marksheffel/Fontaine, Fontaine/Carriage Meadows, and the site access points to Lorson Boulevard.

Marksheffel/Fontaine

The signal-controlled **Marksheffel Road/Fontaine Boulevard** intersection is projected to continue to operate at a level of service D overall or better based on the short-term and 2040 background and total traffic conditions.

Marksheffel/Lorson

Based on the projected short-term total traffic volumes all movements at the intersection of Marksheffel/Lorson are projected to operate at LOS C or better during the peak hours as a Stop-sign-controlled intersection (Stop-sign on the westbound approach). By 2040, it was assumed that this intersection would be signal controlled. As a signalized intersection all movements are projected to operate at LOS D or better during the peak hours based on the projected 2040 background and total traffic volumes.

Fontaine/Carriage Meadows

Based on the projected short-term total traffic volumes all movements at the intersection of Fontaine/Carriage Meadows are projected to operate at LOS C or better during the peak hours as a two-way Stop-sign-controlled intersection. By 2040, it was assumed that this intersection would be signal controlled. As a signalized intersection all movements are projected to operate at LOS D or better during the peak hours based on the projected 2040 background and total traffic volumes.

Lorson Boulevard Site Access Points

The proposed site access points to Lorson Boulevard are projected to operate at level of service B or better as Stop-sign-controlled intersections based on the projected short-term total traffic volumes. By 2040 the northbound approaches at both access points are projected to operate at LOS E during the afternoon peak hour.

TRAFFIC SIGNAL WARRANT ANALYSIS

Lorson Boulevard/Marksheffel Road

The intersection of Marksheffel/Lorson was analyzed to determine if a Four-Hour Vehicular Volume Traffic Signal Warrant threshold would be reached or exceeded based on the projected short-term morning and afternoon peak-hour total traffic volumes. The results of the analysis are

shown in Figure 11. The traffic volumes shown are based on the short-term total traffic volumes shown in Figure 9a. The minor approach volumes were assumed to include the westbound left-turn movements only. As shown in the figure, the thresholds for a Four-Hour Vehicular Volume Traffic Signal Warrant are projected to be exceeded based on the morning and afternoon peak hours. This analysis using the peak hours is intended to provide an indication that a warrant may be met or is close to being met. In order for a Four-Hour Traffic Signal Warrant to be satisfied, the volume threshold would need to be met for two additional hours of the day. For example, the four-hour warrant would be satisfied with the volume thresholds met for one hour in the morning, two hours (instead of the one-hour peak) during the afternoon peak period, and an hour during the mid-afternoon.

Figure 11 also shows the projected short-term peak-hour volumes under another potential scenario presented in the recently submitted Lorson Ranch East traffic impact study. Under this scenario the bridge over the East Tributary would be constructed before the bridge over the main channel of Jimmy Camp Creek. The short-term volumes on the minor approach of the intersection of Marksheffel/Lorson for this scenario include traffic projected to be generated by Carriage Meadows South at Lorson Ranch Filing No. 1 and the future townhomes to be located south of Fontaine Boulevard and east of Carriage Meadows Drive only. As shown in Figure 11, the thresholds for a Four-Hour Vehicular Volume Traffic Signal Warrant are projected to be met for the morning peak hour only under the scenario where Lorson Boulevard is not constructed across the main channel of Jimmy Camp Creek. The afternoon peak hour is just above the minimum 80-vehicle-per-hour threshold. It is unlikely that three other hours could be found that would meet the threshold if Lorson Boulevard is not extended across the Jimmy Camp Creek main channel.

Fontaine Boulevard/Carriage Meadows South

The intersection of Fontaine/Carriage Meadows was analyzed to determine if a Four-Hour Vehicular Volume Traffic Signal Warrant threshold would be reached or exceeded based on the projected 2040 morning and afternoon peak-hour total traffic volumes with and without development of the retail parcels within the Lorson Ranch development. The results of the analysis are shown in Figure 12. The traffic volumes shown are based on the 2040 total traffic volumes shown in Figure 10a. The minor approach volumes were assumed to include the northbound left-turn movements, the northbound through movements, and fifty percent of the northbound right-turn movements. As shown in the figure, the thresholds for a Four-Hour Vehicular Volume Traffic Signal Warrant are only projected to be exceeded based on the morning and afternoon peak hours once the commercial parcel southwest of the intersection of Fontaine/Carriage Meadows is developed.

QUEUEING

A queuing analysis was performed using Synchro/SimTraffic to determine the vehicle queue lengths that could be expected at the site access points to Lorson Boulevard. The projected 2040 morning and afternoon peak-hour traffic volumes were used in the model. The simulation was run five times. The queuing report is attached.

The results of the queuing analysis show that the maximum southbound queue length is about 52 feet long at the east access point and 63 feet at the west access point. There is about 100 feet of storage available between Lorson Boulevard and the first internal street (Becksworth Drive) at both the east and west intersections.

LORSON BOULEVARD FUNCTIONAL CLASSIFICATION AND CROSS SECTION

Lorson Boulevard will be classified as an Urban Non-Residential Collector Street. The street width will be modified for a 44-foot-wide street rather than the standard 52-foot-wide street per the approved deviation. The projected 2040 total daily traffic volume on Lorson Boulevard just east of Marksheffel Road is 12,880 vehicles per day. This volume could be accommodated by a three-lane cross section (one through lane in each direction with a center two-way left-turn lane and right-turn lanes where warranted). The striped center turn lane would be 12 feet wide. The through lanes would be 14 feet wide (exclusive of curb and gutter). Travel lanes would be for shared use (bicycles).

RECOMMENDED INTERNAL STREET CLASSIFICATIONS

Figure 13 shows the estimated average weekday traffic volumes and recommended street classifications for the Carriage Meadows South at Lorson Ranch Filing No. 1 internal streets and the street connection to the north to Fontaine Boulevard.

TRAFFIC SIGNAL ESCROW PERCENTAGES/AMOUNTS

Lorson Boulevard/Marksheffel Road

As shown in Figure 11, the intersection of Marksheffel/Lorson is likely to meet a traffic signal warrant based on the short-term total traffic volumes, however, those volumes assume a new bridge across Jimmy Camp Creek prior to any new subdivisions after Carriage Meadows South at Lorson Ranch Filing No. 1. As noted in the recently completed Lorson East report, another potential scenario would be development of dwelling units in Lorson Ranch East until the dwelling unit cap is reached prior to the construction of the bridge over Jimmy Camp Creek. Under this scenario a traffic signal is not projected to be warranted at the intersection of Lorson/Fontaine in the short-term. Table 3 shows the projected number of westbound left-turning vehicles at the intersection of Lorson/Marksheffel estimated to be generated by future developments within Lorson Ranch. The specific developments included in the calculation are listed in the table. These volumes were used to calculate a fair share contribution toward a future signal at this intersection. Assuming a total signal cost of \$300,000, a fair share contribution towards a future signal at this intersection for Carriage Meadows South at Lorson Ranch Filing No. 1 would be \$115,302.

Fontaine Boulevard/Carriage Meadows

Table 4 shows the projected total traffic volumes on the minor approach volumes at the intersection of Fontaine/Carriage Meadows by development at the time a traffic signal will likely be warranted. This analysis assumes buildout of all of the residential areas of Lorson Ranch, development of the

school parcel, and development of the retail parcel southwest of the intersection of Carriage Meadows Drive/Fontaine Boulevard only. The minor approach volumes were assumed to include the northbound and southbound left-turn and through movements plus 50 percent of the right-turn movements. As shown in Table 3, the Carriage Meadows South at Lorson Ranch Filing No. 1 development is projected to contribute about 22.3 percent of the traffic on the northbound and southbound approaches to the intersection of Fontaine Boulevard/Carriage Meadows Drive. Assuming a total signal cost of \$300,000, a fair share contribution towards a future signal at this intersection would be \$67,016. The timing of a future traffic signal at Fontaine/Carriage Meadows and the escrow amounts towards that signal should be reevaluated with the development of the retail parcel southwest the intersection and/or development of the multi-family residential development southeast of the intersection.

CONCLUSIONS AND RECOMMENDATIONS

Trip Generation

- The Carriage Meadows South at Lorson Ranch Filing No. 1 site is expected to generate about 2,228 new vehicle-trips on the average weekday, with about 1,114 vehicles entering and 1,114 vehicles exiting in a 24-hour period. During the morning peak hour, which generally occurs for one hour between 6:30 and 8:30 a.m., about 44 vehicles would enter and 132 vehicles would exit the site. During the afternoon peak hour, which generally occurs for one hour between 4:30 and 6:30 p.m., about 147 vehicles would enter and 87 vehicles would exit the site.

Projected Levels of Service

- The signal-controlled Marksheffel Road/Fontaine Boulevard intersection is projected to continue to operate at level of service D or better based on the short-term and 2040 background and total traffic conditions.
- Based on the projected short-term total traffic volumes all movements at the intersection of Marksheffel/Lorson are projected to operate at LOS C or better during the peak hours as a two-way Stop-sign-controlled intersection. By 2040, it was assumed that this intersection would be signal controlled. As a signalized intersection all movements are projected to operate a LOS D or better during the peak hours based on the projected 2040 background and total traffic volumes.
- Based on the projected short-term total traffic volumes all movements at the intersection of Fontaine/Carriage Meadows are projected to operate at a LOS C or better during the peak hours as a two-way Stop-sign-controlled intersection. By 2040, it was assumed that this intersection would be signal controlled. As a signalized intersection all movements are projected to operate at LOS D or better during the peak hours based on the projected 2040 background and total traffic volumes.

- The proposed site access points to Lorson Boulevard are projected to operate at level of service B or better as Stop-sign-controlled intersections based on the projected short-term total traffic volumes. By 2040 the northbound approaches at both access points are projected to operate at LOS E during the afternoon peak hour. The traffic signal at the intersection of Marksheffel/Lorson will likely help to create gaps to help these movements occur more easily.

Auxiliary Turn Lanes

Lorson Boulevard/Marksheffel Road

- Based on the projected short-term total traffic volumes a northbound right-turn deceleration lane should be constructed on Marksheffel Road approaching Lorson Boulevard. This lane should be 290 feet long plus a 240-foot taper.
- Marksheffel Road should be restriped to provide a dedicated southbound left-turn lane approaching Lorson Boulevard. This lane should be 440 feet long plus a 240-foot taper.

Fontaine/Carriage Meadows

- There is currently adequate pavement width for a continuous right-turn acceleration/deceleration lane on Fontaine Boulevard between Marksheffel Road and Carriage Meadows Drive. The section of Fontaine Boulevard just west of Carriage Meadows Boulevard will need to be restriped with this development.
- There is an existing 325-foot-long westbound left-turn lane on Fontaine Boulevard approaching Carriage Meadows Drive. This turn lane will meet the criteria contained in the ECM based on a design speed of 50 mph for Fontaine Boulevard and the projected 2040 total westbound left-turn volume at this intersection.

Lorson Boulevard Access Points

- A center striped two-way left-turn lane will be provided on Lorson Boulevard. This will provide left-turn lanes for the access points.
- Right-turn deceleration lanes would be **not** required on Lorson Boulevard approaching either of the site access points.
- ECM-standard intersection sight distance at these access point intersections should be initially provided and maintained across the inside of the horizontal curves.

Traffic Signal Escrow Percentages/Amounts

- Please refer to the above section for calculated fair-share amounts for this subdivision and other future Lorson Ranch developments to be escrowed for a future traffic signal at Fontaine/Carriage Meadows. Typically, signal escrows are provided to the county with the

subdivision plat, however in this case the entire cost of these signals will come from Lorson Ranch developments. As such, the applicant would like to provide the escrow at such time that the signal will be close to meeting traffic volume warrants. For this intersection, LSC suggests the signal escrow for Carriage Meadows South at Lorson Ranch Filing No. 1 be provided to the county at the time of development of the commercial parcel southeast of Fontaine/Marksheffel.

- Also, LSC suggests that the escrow amount for Carriage Meadows South at Lorson Ranch Filing No. 1 toward a future traffic signal at Marksheffel/Lorson Boulevard be reevaluated once the timing of the construction of a bridge over the main channel of the Jimmy Camp is determined. The likely scenario is that a Lorson Ranch East plat would run concurrently with the bridge construction over the main channel. The escrow amount and timing for Carriage Meadows South at Lorson Ranch Filing No. 1 could be confirmed or recalculated at that time.

Street Classification

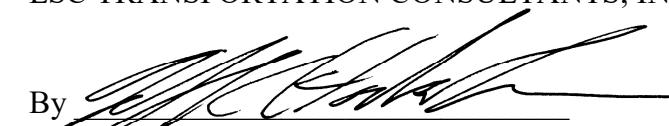

- Figure 13 presents the recommended street classification for Carriage Meadows South at Lorson Ranch Filing No. 1.
